Product Recap

Planview ProjectPlace

Planview ProjectPlace Recap

Planview ProjectPlace offers effective project management through features like Kanban boards and real-time updates, aiding collaboration and visibility. Its adaptability allows for detailed planning and feature customization, integrating tools like JIRA for streamlined management.

Planview ProjectPlace enhances project oversight with advanced workspace navigation, flexible document sharing, and real-time updates on project progress. Integration with tools like Enterprise One and JIRA streamlines project workflows, with features customizable to different team needs. Users benefit from risk management tools and a command feature on project cards that aids in task tracking. The platform supports comprehensive project management, although areas like integration with Enterprise One, graphic performance, and user interface could be improved. Users have noted a need for more robust reporting, refined resource planning, and enhanced mobile app information display. Support response times and integrations with financial tools are areas for future enhancement.

What are the key features of Planview ProjectPlace?

- Workspace Navigation: Offers intuitive navigation to manage multiple project components efficiently.
- Kanban Boards: Enhance team collaboration through visual task management.
- Document Sharing: Simplify team collaboration with secure and efficient document management.
- Integration Capabilities: Integrate seamlessly with JIRA and Enterprise One for streamlined workflow.
- Risk Management: Boosts overall project assurance and control.

What benefits and ROI should users expect?

- Enhanced Visibility: Real-time updates facilitate better project tracking and management.
- Customizability: Features can be tailored to meet team-specific needs for greater efficiency.
- Collaboration: Improved cooperation with tools designed for team interaction.
- Efficient Tracking: Command features on cards assist in detailed task monitoring.
- Adaptability: Flexible to various project scopes and processes.

Organizations across industries like healthcare, information systems, and R&D utilize Planview ProjectPlace for its robust project management capabilities. Healthcare teams manage compliance improvement projects, while IT departments focus on planning and tracking. R&D teams benefit from improved task management and document sharing, ensuring project alignment with strategic goals.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

- "The most useful features of Planview are its integration with resource management and the ability to commit and reserve various resources."

  Validated user
  Senior Tech Manager at a manufacturing company with 1,001-5,000 employees

- "Planview Projectplace is a really good solution for document sharing and keeping track of the history of changes in the document, and I also like that you can have everything you need for a project in one place, for example, for documentation, planning, and even resource planning."

  Gabriela Cerasela Stan
  IT Business Analyst at a manufacturing company with 11-50 employees

- "It is a complete solution. It is very useful for the management of our internal processes."

  Eduardo Maya
  PMO at Hoteles City Express

"Right from the initial steps, we found this product easy to use."

NipunSri

Senior Consultant Cybersecurity at a consultancy with 10,001+ employees

"Clarizen's slide publisher is one of my favorite features."

Validated user

Program Manager at a energy/utilities company with 501-1,000 employees

"Projectplace has excellent collaboration features, including some nice kanban boards. We use DocuSign, and Planview just integrated it into Projectplace, so that was helpful. And I like the fact that it links to Enterprise One, the other Planview tool that we use to manage our capital portfolio."

Validated user

Manufacturing Manager, Capital COE at a manufacturing company with 10,001+ employees

"Projectplace absolutely supports collaboration in real-time. It's probably one of the best tools out there for collaboration. It affects the project's progress quite a bit. I have started two very similar projects in two separate business units, on very similar teams. I did one with Enterprise One, I did one with Projectplace just to see how the mileage would vary. The one with Projectplace had a very short cycle time so we were able to finish the project earlier. The one with Enterprise One was less engaging and it took a little more time. Because we were tracking the tasks inside the schedule it was not on the cards."

ProjectMan83637

Project Manager at a manufacturing company with 10,001+ employees

What users had to say about valuable features:

"Clarizen's slide publisher is one of my favorite features. That is something I frequently use, and that is also highly valued within our company.

What I also like about the system is that it is custom-made. As a result, you won't have a lot of features that you won't use. You can also tailor it to the users' needs in order to provide them with the access they require, which is fantastic, in my opinion.."

"Planview Projectplace is a really good solution for document sharing and keeping track of the history of changes in the document. I also like that you can have everything you need for a project in one place, for example, for documentation, planning, and even resource planning. You can go back to the basics, similar to using an Excel file, and you'll have everything there in Planview Projectplace. You can share documents internally and externally and this is one of the best benefits of the solution. You can also create visibility in your projects in different workplaces, and this function makes the solution okay.."

Gabriela Cerasela Stan
IT Business Analyst at a manufacturing company with 11-50 employees

"The most useful features of Planview are its integration with resource management and the ability to commit and reserve various resources. Oddly enough, I liked how they did the time updates. Every two weeks, it would update all timelines to the current date, and you would then be sort of locked into what you had completed. That was confusing to a lot of people, and if you weren't familiar with it, that's a Planview feature that I haven't seen in Jira, Microsoft Project, or other products. That was very thoughtful. I liked how they handled current time management. It enforced best practices.."

"The most valuable feature is the collaboration with other teams. It allows me to see an overview of the entire project, helping to estimate how much time and effort I have to dedicate to specific sections.

The risk management feature is one that I find very good.

Right from the initial steps, we found this product easy to use.

The logging features are good.."

“The command feature on the cards is very, very helpful. We can update the cards. It is very useful.

We already have a set process in our company for tracking work details and the completion of milestones. We run an integration with Enterprise One. The template is already available in Projectplace as well as Enterprise One. So we follow that template as the corporate suggested, but under each and every line outcome we have a task which we create in Projectplace and assign cards and connect the cards to the tasks. So in terms of how helpful it is for tracking milestones, it is very good.

Projectplace absolutely supports collaboration in real-time. It's probably one of the best tools out there for collaboration. It affects the project's progress quite a bit. I started two very similar projects in two separate business units, on very similar teams. I did one with Projectplace and one in Enterprise One just to see how the mileage would vary. The one with Projectplace had a very short cycle time so we were able to finish the project earlier. The one with Enterprise One was less engaging and it took a little more time. Because we were tracking the tasks inside the schedule it was not on the cards. We don't have cards on Enterprise One. We had to create many lines and it was very hard for people to navigate. In that sense, I would say Projectplace is extremely good for collaboration and it really helps to finish projects very quickly.

It allows our teams to view the project status. The project status is much more visible with Projectplace. It's way better for the project team. For leadership, Planview Enterprise One is better in terms of status because there is an overview screen on Planview Enterprise One.

We also Projectplace to connect Gantt chart activity and Kanban boards. It positively affects the stakeholder's ability to view progress because when they come to the project plan, they can easily see whatever is required. I also have created a dashboard which actually shows them the progress as well. I created the dashboard on Power BI and it's very easy to create a Power BI dashboard using Projectplace data.

©2026 PeerSpot, All Rights Reserved

We use Enterprise One for time tracking and reporting features for work done by project team members but there is integration between Enterprise One and Projectplace. There is a tab inside Projectplace where if you click on it, it takes you to Planview Enterprise One. We track our time through that..”

“I love the collaborative nature just from my role to help. I'm a strategist. I help manage those large strategic projects. Implementation is one significant piece of my role, but I love the collaboration that can exist within the tool. We're still trying to work through that but the ownership and trying to get people to really gauge and use the tool when you have 13,000 to 14,000 people across the organization isn't easy. It could be challenging because not everyone jumps right in the feet and feels comfortable with the technology, but the ability to drive ownership and visibility into what's going on is just wonderful from my perspective as trying to empower the teams that I manage. That's been very, very helpful.

I like Projectplace for working with detailed implementation plans for projects. Early, when I first started using it, it was just trying to get over a mental hurdle of how not to lose the details. There are so many different ways in which you can set up a workspace, the activities, the cards, and using a checklist on the cards. There are so many different ways in which you can set it up. It's fun to think through how to best transition those detailed work plans into the Projectplace environment. Its work. It's almost like there's so much ability to set it up to meet the team's needs or a specific project is good and bad in terms of having the options available to you. It's challenging at times because there are so many options but it's very flexible.I think it's a very flexible tool for detailed work plans because we have a new hospital tower that we're opening now. I used to have a 350 to 400 row Excel file. We were considering rather large files that we got narrowed down into some more concise workspaces in Projectplace. Flexible is a keyword I would use.

Projectplace tracks work details and completion milestones. I normally try to set up as many milestones as possible. One of the challenges is the data that's from it if you try to mix people. People want to see more operational metrics or KPI finances, things like that. Things that aren't really project or task-related. I would say they're concerned about how other things are going related to a significant project and those things aren't always available but we can, obviously based on the activities and things, report cards, progress, milestone completion, and some other things. I know it's just a challenge. I know our leader that manages the tool

©2026 PeerSpot, All Rights Reserved

and collaborates with Planview is really focused on metrics, reporting, and how we keep making that more robust. Finding a way to take it another layer down into a more detailed look at metrics and things outside of project metrics is a challenge. It's a challenge getting that fine layer of detail.

It definitely supports collaboration in real-time. The only challenge there is, is trying to manage the change of the way people do work. It definitely supports collaboration in real-time, and there are many people that have jumped in and use all the time. But then for my seat, I also need to know that an individual is not quite there yet. I may need to follow up with a separate note. I may need to follow up with a phone call or something to check-in. It does work. It's getting people to buy in and actually use it and get over the mental hurdle of understanding that it's not additional work, it's just a different way to do work.

We also use Microsoft Teams as an organization so people need to understand how the different tools work and how they relate to one another and that sort of thing. Yes, it works, it's just getting over that hurdle as an organization of getting people to buy into, to using it in that fashion.The overall visibility in the project status provided by Projectplace is okay. It should be a little more robust. I know we have some of it set up. I don't know all the details for certain types of projects. We can put in a specific project status, but for many projects, we don't have that functionality turned on and it's very vague. I don't know the behind the scenes of what someone is doing, but there are certain projects where the only status that people could see is very vague in terms of task and tasks completed. It doesn't talk about the details of the three potential barriers. Some people want to know a little more detail. We do use some functionality that is turned on for certain projects that we use that people can submit a project status and that's helpful. But we don't use it across the board. I don't know the details of what someone's turning off or on and why that's the case. I'm seeing that across different projects and different workspaces.

This ability to allow other teams to see into our project status affects my organization. One of the huge benefits, even just with the integration with PPM Pro, since we use that as well and Projectplace, we've had a huge leap forward in

©2026 PeerSpot, All Rights Reserved

terms of visibility across the organization of just what's out there. What's available in terms of projects, what's currently going on and we organize that, based on the hospital service line. We organize those things that people could easily drill down and say, "Hey, what's being worked on"? We slice and dice that in numerous different ways. The visibility has been great. It's just so we can have a huge initial step and our internal team's done a great job to work with Planview to help build some of those dashboards and things and actually do that in PPM Pro. I think there's some room to make it even more robust down the road. But there is great visibility early on. There are things that never existed before.

It has helped to track resources allocated across multiple projects. Within PPM Pro we have some of that visibility. I don't know that we see that within Projectplace, they've been splitting hairs, but I don't know that Projectplace allows us to see that. For example, with the projects I'm leading, I'm aware of who's on all of them and the usual suspects right across our organization. But I don't know if it's organization-wide, if we're there yet, by using Projectplace.

Projectplace definitely dynamically updates schedules as progress is made. It's great. The real-time nature of it all is a great piece to have real-time changes. People are able to see those activities and how they may have changed. That visibility is great. Then I use the conversation piece and really communicate with the team there as well. That real-time change is really helpful from my perspective.."

"We were originally using Clarizen, and Clarizen has been acquired by Planview.

We were a division of a larger corporation. We were sold or divested. As a result, we needed to select a new system. As the system we had was very broad, and we only used a small portion of it. When you notice that it's becoming too complicated, and we simply made less use of it.

We were concerned that we were becoming smaller, we conducted an investigation to find something that would suit our needs. It would be easy to scale as well as adjustable.

If there is anything you will not use, I believe you should not use it at all or not show it to the project manager, rather than taking a very corporate approach and receiving a lot of extra features that you will not use. That is one of the reasons that we have chosen Clarizen instead of Microsoft Project.

We have reviewed also three other systems, and we stepped away from the system that we were used to because we also found it too broad.."

Project Manager at a manufacturing company with 10,001+ employees

"The return on investment with this product is huge. When I think about our process prior to implementing Projectplace, this is a lot easier. We used to have to deal with a lot of emails, repeat communications, and so forth. Now, I can more easily manage what I need to do, including working with timelines. Important dates can be clearly seen and nothing is missed.

In the past, there were cases where teams missed deadlines because they could not easily be viewed. Consequently, projects dragged and the releases were late. Now, thanks to this product, we are constantly updating each project's status and the whole team can see everything in a single place. The ease of doing so is the key point.."

“We use it for a lot of large strategic projects from an implementation perspective. We used to have rather large Excel files that we were managing task and project work to be done. Then, we transition all of those work plans into Projectplace. We use it for large strategic project implementations, the new cancer center, we are currently using it for a new hospital tower that we're opening up this fall, and things like that. So large strategic projects is primarily where I use it.We have some service line leadership teams across our healthcare organization that we use to manage their work that's aligned with our mission and vision and so we use it for a lot of those teams. Across our organization, we have a lot of teams that are using it for a myriad of different reasons and it keeps growing. We have an accrediting body called "joint commission." They'll survey your facility and show where there are some opportunities for improvement. When our quality team gets that, they've used Projectplace to create some standard work using those ways within that combined view to really manage their work. That's the same work that needs to be accomplished once one of those surveys comes back in. They've set up that standard work and now they use that for every survey across all of our different facilities.That was a really cool use case that I was involved with helping them design but that's being used across the organization as well. There's some work intake because we also have PPM Pro. From a work intake perspective, there are a lot of teams that are managing work intake and then creating projects in Projectplace or cards in the workspaces as a result of that. That's just the tip of the iceberg of what our organization is using it for..”

"I don't know the behind the scenes set up that had to take place to make it happen but from a user's perspective, it was seamless. It was a couple of pieces of information, it links to our single sign-on for our organization. From a user perspective, it's super simple.The setup took around six months. It felt fairly short from when I started hearing about it from our internal team to when that was getting rolled out. We rolled it out to certain groups first and started using it. It took around six to nine months.

It's pretty minimal in terms of day to day maintenance. There's a team of four, however, one doesn't work in there a lot. I think it's really only a director, one staff, that's working behind the scenes and some of that's PTM-Pro related too, it's not all Projectplace.

We have hundreds of users. We're over a thousand in terms of people that have accounts but it could be someone is not using it.."

"I would say that up until about a month ago, I was very pleased with the assistance. Then I got a new person on board, and I've been confused about the support since then.

What I also like, and what I am also struggling with is technical support. While it was Clarizen I received great support, but now that is Planview the level of support is less, but it could be bad luck because my technical support person has left the company, and I have a new person. As a result, the technical support is somewhat reduced.

One of the things I liked best about Clarizen was that they provided excellent technical support even after you'd been using the system for years. You knew exactly what was coming, what the updates were, and if you had any support questions.

The support allowed us to differentiate between the other solutions. Also, it was one of the reasons we chose this solution and would recommend it to others.."

Other Advice

"I would rate ProjectPlace nine out of 10. However, before picking a solution, I would recommend doing some reference calls. I think doing reference calls with other companies can help you make a decision.."

"The biggest lesson that I learned from using this product is that with the right tool, it is easy to meet deadlines and never miss an important milestone.

I would rate this solution a nine out of ten.."

"I would absolutely recommend the system to other users.

I am very pleased with the system right now. Based on the knowledge, and the experience that I have with other project management systems; I would rate Planview Projectplace an eight out of ten.."

"It is very good and complete, but we need to learn how to use it. My advice would be to sign with another party because it is not easy. Its deployment and features are not easy. You need an explanation of a lot of things.

I would rate it a seven out of ten because of the complexity of configuring simple things and the quality of their technical support.."

"If you want to drive adoption, my advice is to negotiate with Planview and get all of the licensing you need ahead of time, so you don't get nickel and dimed, choose some best practices for adopting any new project management tool and an agile tool, which means you start with a small group of people, win hearts and minds, and then extend it throughout the organization.

It's one of the better tools that I have ever used. I would rate Planview Projectplace a seven out of ten.."

“I don't know how Planview Projectplace is deployed, because that is covered by the IT department.

There are about one hundred users of Planview Projectplace within the company. It could be more than one hundred, but I'm unsure about the exact number of users.

My advice to others who are looking to start using Planview Projectplace is to pay attention to their needs. First, they have to know what they need, in particular, for what purpose they want to use the solution. If they want a shared place for documentation, correspondence, etc., they can use Planview Projectplace.

It would also depend on how many documents they have. If they want to use a solution for sharing some information with the team, I would recommend Basecamp because it draws more projects, then they can open and close those projects. If it's a matter of big projects that have durations of more than one month, and you need to go back to the history, or if it's a big application and you'll have several releases on it, then Planview Projectplace is a better solution for you in terms of tracking, for example, you can always go back to the documents that have been written years ago.If you want a solution for planning and looking into issues or defects, for example, project management for developers or IT projects with developers, Planview Projectplace is not the solution for you. It depends on the needs of your company. For IT projects, you can use Jira and Confluence. It's just a matter of needs. It would be awesome if you can have them all in one place, but I haven't found a tool, so far, that can cover everything.

I'm rating Planview Projectplace eight out of ten, based on my needs. The solution is okay as it covers my needs in different ways..”

About this buyer's guide

Thanks for downloading this PeerSpot report.

The summaries, overviews and recaps in this report are all based on real user feedback and reviews collected by PeerSpot's team. Every reviewer on PeerSpot has been authenticated with our triple authentication process. This is done to ensure that every review provided is an unbiased review from a real user.

Get a custom version of this report... Personalized for you!

Please note that this is a generic report based on reviews and opinions from the collective PeerSpot community. We offer a customized report of solutions recommended for you based on:

- Your industry
- Company size
- Which solutions you're already considering

The customized report will include recommendations for you based on what other people like you are using and researching.

Answer a few questions in our short wizard to get your customized report.

About PeerSpot

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
