Product Recap

OneLogin by One Identity

OneLogin by One Identity Recap

OneLogin offers organizations a user-friendly platform for single sign-on, multifactor authentication, and seamless access management. It enhances security and streamlines processes, making it vital for application management.

Designed for ease of integration, OneLogin helps organizations efficiently manage access and improve cybersecurity through centralized application management. It simplifies onboarding and offboarding, enhancing remote work capabilities and offering robust user mapping. Users appreciate seamless integration and reliable logs. However, it could improve with enhanced technical support, more out-of-box connectors, and better customization options. Challenges with device management and system integrations have been noted, with legacy application support and infrastructure stability needing attention.

What are the key features of OneLogin?

- **Single Sign-On:** Provides centralized access to applications.
- **Multifactor Authentication:** Enhances security with multiple verification steps.
- **Self-Service Password Resets:** Empowers users to manage their passwords.
- **Ease of Integration:** Connects seamlessly with cloud and on-premises systems.

What benefits can users expect?

- **Improved Time Management:** Streamlines user access processes.
- **Reduced Security Incidents:** Strengthens authentication measures.
- **Efficient Interface:** Facilitates smooth user navigation.
- **Enhanced Remote Work:** Supports flexible workforce needs.

Organizations employ OneLogin for single sign-on and identity management, connecting users to applications like CRM and Slack. It supports role-based access control and seamless cloud transition, integrating with Active Directory to enhance user management in industries demanding strong security and efficiency.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

- ✓ “My impressions of the user identity synchronization across directories functionality are that OneLogin is used for secure access to campus resources including data and apps, ensures fast access and easy authentication while blocking regular or unauthorized access, allows third-party integration, and is a comprehensive identity and access management solution designed to streamline workplace authentication and authorization.”

Amit Rathod

Senior Analyst - IDAM at Toll Holdings Limited

- ✓ “Since implementing OneLogin by One Identity, the biggest positive change I've noticed is how much smoother and faster my workday feels.”

Vaibhav Patil

Digital Marketer at DigiLiterate

- ✓ “Overall, it not only strengthens security but also simplifies the access management process, making daily operations more efficient and manageable.”

Uneish Dadarwala

Information Security Engineer at DigitalTrack Solutions PVT LTD

- ✓ “OneLogin has strengthened my security posture, streamlined user onboarding and offboarding, and provided a seamless experience for employees accessing multiple applications.”

Neha Chhangani

Business Analyst at a startup based organization

- ✓ “OneLogin has a very positive impact on our organization, especially in the areas of security, user experience, and operational efficiency.”

Prithviraj kallurkar

Business Development Executive at Digitaltrack

- ✓ “Implementation time has been cut by 60 to 70%, and the number of people required for management has decreased by at least 60 to 70%.”

Adil-Khan

Solution Architect at a tech vendor with 10,001+ employees

- ✓ “One of the biggest positive impacts of OneLogin by One Identity has been the reduction of administrative workload while improving security through automated provisioning for new employees and removing access during offboarding.”

Alishan Haider

Software engineer at The Double

What users had to say about valuable features:

“OneLogin by One Identity's standout features are SSO and MFA, making the login process simpler for users and more secure. Centralized user and access management allows the IT team to manage multiple application access from one place. The reporting and user activity visibility is beneficial for troubleshooting access issues or reviewing security. Automation for onboarding and offboarding is crucial in large organizations as manual access management across applications is difficult. Integration with existing environments adds value, yet challenges still arise with legacy applications and varied authentication requirements..”

Nikita B

Senior Business Manager at Fidelix

[Read full review](#) 

“The best features OneLogin by One Identity offers include providing single sign-on options, which are very helpful for customers using those pages. For user experience, we have received mixed feedback, as some users find it very user-friendly, while non-technical users find it somewhat difficult. However, most users say it is user-friendly. OneLogin by One Identity has positively impacted my organization and our customers by making their environment secure, as users do not need to save their passwords in insecure ways, thereby making their environment more secure. For my customers, it has become very useful, and their daily life gets easier because they do not need to type the password repeatedly, which is very effective for them..”

Uththara Kothalawala

Systems & Security Engineer at Connex Information Technologies

[Read full review](#) 

“One of the best features that OneLogin by One Identity offers is its very broad spectrum of integrations with multiple applications, which is one of the best advantages for us.

“I find the ease of setting up these integrations to be very straightforward, and there is extensive documentation and many guides available on the platform for us to use.

“OneLogin by One Identity has positively impacted our organization because previously we managed access to individual applications separately, which was very tedious. With the integration of this identity manager, we were able to streamline our workflows; when users are onboarding to the organization, we can easily assign a set of application access and remove that access with one click during offboarding..”

Yasiru Perera

Manager - Solutions Engineering at Connex Information Technologies PVT LTD

[Read full review](#) 

“OneLogin by One Identity offers many features, but for me, the best ones are single sign-on, multi-factor authentication, and centralized access management, because I especially appreciate being able to access multiple work applications from one place without managing a separate password for each tool.

Multi-factor authentication by OneLogin has made our login process more secure without adding much extra effort, as users verify their identity with an additional step when signing into our tools or internal applications, which gives us more confidence that only authorized people are accessing our company applications.

OneLogin by One Identity has positively impacted my organization by making access management more streamlined, as it reduces the need to manage multiple passwords, makes it easier for our employees to access applications when they need, and adds stronger security through SSO and MFA..”

Kishan Chand

Project Manager

[Read full review](#) 

“OneLogin by One Identity offers valuable features such as single sign-on, multi-factor authentication, identity lifecycle management, and smart factor authentication, centralizing access to both cloud and on-premise applications. It supports role and attribute-based provisioning for entitlement management, offers real-time directory synchronization, and adaptive login flows with Vigilance AI. Additionally, its Smart Factor Authentication feature effectively balances security and usability, enhancing the authentication process by requiring stronger verification in case of unusual login behavior. The integration of phishing-resistant device trust significantly impacts authentication processes, adding another layer of security beyond verifying users' credentials.

“A specific area in the valuable features is the automated provisioning and de-provisioning processes that reduce the risk of someone retaining access they no longer need. The lifecycle management feature automates these processes, making day-to-day access much easier to manage. OneLogin by One Identity helps in maintaining the directory infrastructure while centralizing SSO, MFA, and identity lifecycle management for both on-premise and cloud infrastructures. Additionally, it provides a seamless end-user experience by granting access through a single login, thereby reducing password-related support requests..”

Alishan Haider

Software engineer at The Double

[Read full review](#) 

“Based on my experience, some of the best features OneLogin by One Identity offers include built-in SAML pages that can be utilized by most cloud application providers. It also allows for a second login option directly to the SaaS application if you're using external contractors. OneLogin by One Identity didn't restrict that privilege, especially for support organizations, where you had an offshore support organization that needed one-time access to the application. You don't need to give them OneLogin by One Identity licenses or Active Directory accounts. You could have them use user ID and password to connect while your employees used OneLogin by One Identity. OneLogin by One Identity provided that additional security, which an application user ID and password could not provide. OneLogin by One Identity enforced multi-factor authentication, which wasn't enforced in many cloud applications.

“OneLogin by One Identity has positively impacted my organization in that one big benefit was onboarding and offboarding. From an onboarding perspective, it was easier to train the user to have just one application to log into, which was OneLogin by One Identity. Offboarding was amazing. When a person left, I didn't have to search which applications they had access to. Once their Active Directory account was disabled and OneLogin by One Identity was disabled, they had access to none of the company's confidential applications and data..”

Schakravarty Chakrabarti

Director of Information Technology Canada at a retailer with 1,001-5,000 employees

[Read full review](#) 

Other Solutions Considered

“I have worked with Ping Identity as an alternative to OneLogin by One Identity in my previous organization. In my current organization, we were trying Okta..”

Harjoth Sudan

Vertical Head - Ai talent Solutions at a government with 11-50 employees

[Read full review](#) 

“If I compare OneLogin by One Identity with Okta, OneLogin by One Identity is way better. The server issues we faced with Okta are not present with OneLogin by One Identity. Licensing-wise, OneLogin by One Identity is cheaper, which helps significantly..”

Harjoth Sudan

Vertical Head - Ai talent Solutions at a government with 11-50 employees

[Read full review](#) 

“CyberArk was previously used before switching to OneLogin by One Identity. After conversations with both sales teams, the sales pitch of OneLogin by One Identity stood out compared to CyberArk. OneLogin by One Identity was found to be a better solution in cost and resource management, which is why the switch was made..”

Adil-Khan

Solution Architect at a tech vendor with 10,001+ employees

[Read full review](#) 

“I considered alternatives such as Microsoft Entra ID, Okta, and Ping Identity, evaluating factors including SSO and MFA capability, application integration, user provisioning, security controls, ease of admin, and licensing. My focus was not on feature count, but on which product best fits within the existing environment..”

Nikita B

Senior Business Manager at Fidelix

[Read full review](#) 

“Before choosing OneLogin by One Identity, we also evaluated Okta, Microsoft Entra ID, and Ping Identity. These were our primary alternatives as they offer comparably robust capabilities surrounding SSO, MFA, and identity management. Ultimately, we chose OneLogin by One Identity because it provided the right balance of functionality, ease of administration, integration with hybrid directories, and cost aligned with our requirements without adding unnecessary complexities..”

Alishan Haider

Software engineer at The Double

[Read full review](#) 

“We previously used Microsoft Entra ID, formerly Azure Active Directory, for many of our identity and authentication needs, alongside various manual processes for application access. We evaluated OneLogin by One Identity because we wanted a more flexible, natural identity platform featuring straightforward SSO, MFA, directory integration, and automated provisioning for onboarding..”

Alishan Haider

Software engineer at The Double

[Read full review](#) 

ROI

Real user quotes about their ROI:

“We have seen a return on investment with OneLogin by One Identity, mainly through time savings and reduced administrative efforts, as centralized access and SSO have reduced password-related support work, while faster onboarding and user application management helped our IT team spend less time on routine access tasks..”

Kishan Chand

Project Manager

[Read full review](#) 

“I can definitely mention that I don't have the metrics, but I can share that from a service desk perspective, the number of password reset calls reduced. As the calls reduced for password resets, which was the highest number of calls before OneLogin by One Identity, we could optimize our service desk employees and repurpose the ones that were needed for project work..”

Schakravarty Chakrabarti

Director of Information Technology Canada at a retailer with 1,001-5,000 employees

[Read full review](#) 

“After the deployment of OneLogin by One Identity, it does require maintenance on our end. Two staff members maintain the system because employees do face issues and need to flag them. Although this reduced the login issues and tickets that came in initially, the IT support team, specifically two people, work on this alongside other software to solve issues related to logins..”

Harjoth Sudan

[Read full review](#) 

Vertical Head - Ai talent Solutions at a government with 11-50 employees

“OneLogin by One Identity brings ROI by reducing manual work involved in user access management, rather than direct cost savings. Streamlined onboarding and centralized provisioning based on user roles save time. Central access disabling during offboarding minimizes the chance of leaving access active in applications. I have not formally measured a specific percentage, but I have observed less repetitive admin work, fewer manual steps, and easier troubleshooting of authentication issues..”

Nikita B

[Read full review](#) 

Senior Business Manager at Fidelix

“Significant savings are being made in terms of return on investment. After implementation, fewer engineers in the team were needed to manage OneLogin by One Identity. Onboarding is automated, so there is no need to worry about the onboarding process, and using REST API calls for access management simplifies automation. OneLogin by One Identity's Safeguard detailed Swagger build is quite helpful. Implementation time has been cut by 60 to 70%, and the number of people required for management has decreased by at least 60 to 70%. Once architecture is defined and deployed in the cluster, scaling becomes easy, and integration is straightforward for adding new systems..”

Adil-Khan

Solution Architect at a tech vendor with 10,001+ employees

[Read full review](#) 

“We have seen a return on investment. The onboarding and offboarding processes have reduced costs by around ten to twenty percent. Time savings are notable as onboarding and offboarding durations have decreased by up to forty percent. Positive results come mainly from automation in user provisioning and de-provisioning, paired with a roughly fifty percent reduction in password-related help desk requests.

“Additionally, while security ROI is harder to quantify, faster onboarding processes, effective MFA, and risk-based authentication collectively lower the risk of unauthorized access. In summary, the combining time savings, reduced support loads, and enhanced security truly validate the licensing cost..”

Alishan Haider

Software engineer at The Double

[Read full review](#) 

Use Case

“My main use case for OneLogin by One Identity is managing all the employees with full security to access our business applications through single sign-on and centralized identity management..”

Kishan Chand

Project Manager

[Read full review](#) 

“OneLogin by One Identity is implemented as a distributor solution, providing implementation and support as we are a partner of One Identity. We provide a solution for Identity and Access Management requirements for our customers using One Identity. One customer stands out where we have implemented OneLogin by One Identity with a bundle solution that includes UEM, requiring both a device management solution and an Identity and Access Management solution. We provided OneLogin by One Identity to fulfill their Identity and Access Management requirement..”

Uththara Kothalawala

Systems & Security Engineer at Connex Information Technologies

[Read full review](#) 

“OneLogin by One Identity is used for centralized identity and access management for employees, allowing secure access to multiple work applications through a single identity instead of managing separate credentials. It utilizes automated provisioning and de-provisioning, enabling prompt access assignment based on roles when new employees join, and the removal of access when they leave. This goes beyond SSO and MFA, as access policies are enforced based on role and user context, with updates occurring automatically when someone changes departments. OneLogin by One Identity supports role and attribute-based provisioning for entitlement management, and integrates features like smart factor authentication for high-risk login attempts..”

Alishan Haider

Software engineer at The Double

[Read full review](#) 

“OneLogin by One Identity is used to manage user identities and single sign-ons, as well as manage access to individual applications used in our organization.

“A specific example of how OneLogin by One Identity manages access and single sign-on is through integration with our existing applications so that users have easy and secure access without the need for multiple credentials to other applications in the organization.

“In terms of our main use case, there are many integrations available, and they are very seamless and easy to use..”

Yasiru Perera

Manager - Solutions Engineering at Connex Information Technologies PVT LTD

[Read full review](#) 

“OneLogin by One Identity is primarily used for identity and access management, with a focus on SSO and MFA. This allows users to access necessary applications through a centralized login rather than maintaining separate credentials for each application. Whether an employee needs access to Microsoft 365, Salesforce, or internal business applications, those apps are integrated with OneLogin by One Identity. Users log in once through the platform, complete MFA if necessary, and access applications they are authorized to use.

“OneLogin by One Identity is also leveraged during onboarding and offboarding processes. New hires gain access based on their roles, and when someone leaves, their access is disabled centrally rather than relying on individual application teams to remove accounts..”

Nikita B

Senior Business Manager at Fidelix

[Read full review](#) 

“The main use case for OneLogin by One Identity when I was using it at IQ was having one single user ID and one single password that gave me access to applications that were assigned to my profile.

“Any cloud application is a use case for OneLogin by One Identity. Let me take the example of Salesforce. Salesforce uses your email as your user ID to log in, and sometimes your email has been used for another Salesforce instance, another Salesforce application, or another one you've used at a different company. Using OneLogin by One Identity, it had the SAML page that connected with Salesforce. OneLogin by One Identity had my user ID and password that was synced with Active Directory. If Salesforce was an assigned application, it would appear in my OneLogin by One Identity screen once I logged in, and I could just launch the application..”

Schakravarty Chakrabarti

Director of Information Technology Canada at a retailer with 1,001-5,000 employees

[Read full review](#) 

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“The initial deployment was relatively straightforward, particularly for basic SSO and MFA functionalities, though integrating and configuring more advanced provisioning policies required some additional planning..”

Alishan Haider

Software engineer at The Double

[Read full review](#) 

“The initial deployment of OneLogin by One Identity was acceptable. It was neither easy nor difficult, but it was doable. It took approximately four weeks to fully set up OneLogin by One Identity, completing all training for the team..”

Harjoth Sudan

Vertical Head - Ai talent Solutions at a government with 11-50 employees

[Read full review](#) 

“The deployment was quite manageable with straightforward integration, and there are third-party integrations available with OneLogin portal, allowing us to push that within a manageable timeframe..”

Harshal Pachpande

Security Operation Consultant at SecurView

[Read full review](#) 

“The setup for OneLogin by One Identity was straightforward, but understanding the license's scope was crucial for assessing total implementation. Integrating with existing applications and directories was essential, as was considering the total cost beyond just licensing. Professional services, customization, and legacy application integration come with extra effort..”

Nikita B

Senior Business Manager at Fidelix

[Read full review](#) 

“The initial deployment of OneLogin by One Identity was not much complicated. We cannot say it is easy, but with the help of our IT team, it was easier, and there were no complications.

“The integration with third-party authentication providers was complicated internally, but since our IT team is very knowledgeable about integrating those portals, we did not require an external implementation partner or support from OneIdentity, so it was not much complicated. It was hard at the initial level, but once we referred to the available guide, it became easy..”

Naresh Sonawane

Security Operation Consultant at SecurView

[Read full review](#) 

“OneLogin by One Identity was deployed four years ago and is continuously being used with no issues. Currently, over 20,000 VMs and cloud environments are managed by OneLogin by One Identity. A cluster-based deployment is used, geo-redundant across three sites. It took one and a half months to build the lab environment. Once all problems and requirements for the environment setup were identified, the production deployment took around one month.

“Since OneLogin by One Identity was implemented, a transition occurred from the old version, which was the TPAM solution. OneLogin by One Identity acquired that particular solution, and the transition was made to OneLogin by One Identity access management. This transition gave the capability to monitor, conduct comprehensive audits, and manage all resources easily whenever needed. Access control for admin personnel is very easy, and access can be managed. Whenever a system is required to be removed from the sync or out of the cluster, it is straightforward to remove from OneLogin by One Identity's Safeguard. The earlier PAM solution was quite difficult to set up, and this one has API Swagger development, making it easy to communicate. Whenever audits are needed, the REST API can be called, which is the biggest advantage..”

Adil-Khan

[Read full review](#) 

Solution Architect at a tech vendor with 10,001+ employees

Customer Service and Support

“Customer support has generally met our expectations, as the support team is very knowledgeable and helpful, with most issues being resolved in a timely manner..”

Dnyaneshwar Bhopale

Associate technical desktop support at Digitaltrack solutions Pvt. Ltd

[Read full review](#) 

“My experience with OneLogin by One Identity's customer support has been positive, rating it eight out of ten. During the implementation, the support was highly effective and deserving of a ten out of ten from my perspective..”

Nikita B

Senior Business Manager at Fidelix

[Read full review](#) 

“I have not contacted the technical support or customer support for OneLogin by One Identity directly, nor have I interacted with them. However, I have seen some emails from their support team, and they appear to be good. We discuss support internally, and we are satisfied with it..”

Harjoth Sudan

Vertical Head - Ai talent Solutions at a government with 11-50 employees

[Read full review](#) 

“Our experience with the customer support team for OneLogin has been positive, as cases are generally handled professionally and the technical resources are knowledgeable.

“I would rate the customer support for OneLogin eight out of 10..”

Vishal Koovaparambil

Server Security Analyst And Solution at Digitaltrack

[Read full review](#) 

“OneLogin by One Identity's support team is doing a great job, which is why the product has been used for the last four and a half years. Support and management, including contacting OneLogin by One Identity for issues, are always straightforward. Whenever problems are encountered, quick responses are received from OneLogin by One Identity's support team..”

Adil-Khan

Solution Architect at a tech vendor with 10,001+ employees

[Read full review](#) 

“Customer support for OneLogin by One Identity has been exceptional. We reached out to OneLogin by One Identity support several times, primarily for directory synchronization, provisioning, and application integration issues, and our overall experience has been very positive. The engineers we interacted with demonstrated technical expertise and aimed to identify root causes rather than merely providing generic troubleshooting steps. Their support portals and knowledge base are valuable resources, allowing many common configuration issues to be addressed without opening a ticket. One Identity provides multiple support tiers, including critical twenty-four seven coverage for issues, depending on the chosen support plan.

“I rate customer support at a solid nine out of ten, as they have been responsive and highly knowledgeable, especially when I needed help with specific synchronization, provisioning, and application integration concerns. Their availability for twenty-four seven support is also something I appreciate, contributing to my high rating..”

Alishan Haider

Software engineer at The Double

[Read full review](#) 

Other Advice

“Regarding OneLogin by One Identity's AI capabilities, I think they can add more value by helping organizations identify unusual access patterns and potential security risks. From a governance perspective, having clear controls, better visibility, and audit trails around AI-driven decisions is important. Overall, I see AI as a useful complement to existing identity and better security controls.

My impression of OneLogin by One Identity's ability to provide a seamless end-user experience for signing in and authenticating to needed applications is that the SSO solution provides a smooth sign-in experience. SSO reduces the need to repeatedly enter passwords, while centralized authentication makes it easier for users to access all our internal applications without adding unnecessary steps.

I would rate OneLogin by One Identity a 10 out of 10 because this solution makes accessing multiple work applications simple while maintaining strong security. The combination of SSO, MFA, and centralized access makes the overall login experience more reliable and convenient for our team as well as for me..”

Kishan Chand
Project Manager

[Read full review](#) 

“Regarding OneLogin by One Identity's AI capabilities, I find its accuracy and reliability of output to be very good so far, but it definitely needs verification from a human.

“My advice for others looking into using OneLogin by One Identity is that the management of identity and identity security is a critical topic in the industry, and it is essential for an organization to have a product OneLogin by One Identity to streamline their identity management.

“Overall, OneLogin by One Identity is doing a very good job in helping customers manage their identities, which is one of the most critical attack surfaces nowadays with the growing threat landscapes.

“I found this interview to be very straightforward and easy. I would rate this product an 8 out of 10..”

Yasiru Perera

Manager - Solutions Engineering at Connex Information Technologies PVT LTD

[Read full review](#) 

“Regarding OneLogin by One Identity's AI capabilities, its governance and security is good, and I do not see any need for improvement in that area. I think its accuracy and reliability of output are around 75% to 80%.

“I did not deploy the Smart Factor Authentication feature for any of our customers, so I do not know how it would affect our environment. Regarding user identity synchronization across directories functionality in OneLogin by One Identity, I find it to be a good feature with no issues in my experience. The integration of phishing-resistant device trust has a good impact on my authentication processes. My impression of OneLogin by One Identity's ability to provide a seamless end-user experience for signing in and authenticating to needed applications is very good, and customers are using it without any issues. I did not use the adaptive login flows with Vigilance AI. HR-driven identity management plays a significant role in streamlining employee identity handling in our customer's environments, improving their business flow.

“My advice for others looking into using OneLogin by One Identity is to do a POC before purchasing to match their requirements with the solution, as it is overall a good solution. I rate this product a 10 overall..”

Uththara Kothalawala

Systems & Security Engineer at Connex Information Technologies

[Read full review](#) 

“My advice for others considering OneLogin by One Identity is to plan the implementation carefully before rolling it out company-wide. Identify critical applications and define roles and access policies, and determine how your directories will serve as the source of truth. It is also wise to execute the rollout in phases, starting with a small group of users. Investing time in the initial configuration will allow OneLogin by One Identity to significantly simplify identity management while providing a smoother and more secure authentication experience for users.

“Regarding user identity synchronization functionality, my impression is very positive. It has been extremely beneficial in our hybrid environment. OneLogin by One Identity directly synchronizes identity information, providing a consistent way to manage it between our on-premise Active Directory and cloud applications. The main advantage is that when users are added, updated, disabled, or moved to different groups in the directory, those changes can automatically flow through OneLogin by One Identity to connected applications without requiring IT teams to update each system manually. It has made onboarding and offboarding processes more straightforward and effective, ensuring user access remains aligned across both on-premise and cloud environments.

“I give this review an overall rating of ten out of ten..”

Alishan Haider

Software engineer at The Double

[Read full review](#) 

“Before implementing, assess organizational requirements instead of choosing OneLogin by One Identity based solely on features. Conduct a thorough review of applications, directories, and authentication processes. Test with crucial applications first to refine the user experience, then expand gradually.

“[Understand](#) the licensing scope and integration effort needed, including with legacy systems, to have a complete view of the total cost of ownership.

“When relying on AI capabilities, ensure they are governed carefully due to the sensitive nature of identity data, emphasizing human review in security decisions. Utilize AI as a support tool to identify risky behaviors but maintain human oversight.

“Risk-based and adaptive authentication approaches enhance security without overwhelming users with unnecessary prompts. [Strike](#) the right balance in risk settings and review false positives for a smooth user experience.

“I give OneLogin by One Identity an overall rating of eight out of ten..”

Nikita B

Senior Business Manager at Fidelix

[Read full review](#) 

“I would ask anyone looking into using OneLogin by One Identity to take a phased approach, either going by region in a multi-company organization or by company because sometimes you have small integration issues to resolve, especially with cloud applications and rules. [Make](#) sure that you resolve that with a smaller impacted population rather than implementing something globally in a large scale and then having bigger problems to deal with.

“I rate OneLogin by One Identity a nine on a scale of one to ten. I choose nine for my rating of OneLogin by One Identity because I believe even the best of us have an opportunity to improve. We can never be a ten, or we should not be a ten. We should always aspire to improve.

“Regarding OneLogin by One Identity's AI capabilities, my impression of its governance and security is excellent. My impression of its accuracy and reliability of output is also excellent.

“We reviewed SmartFactor Authentication for OneLogin by One Identity, but had not implemented it while I was at IQ.

“My impression of the User Identity Synchronization across directories

functionality in OneLogin by One Identity is that it is very strong, actually in most single sign-on providers.

“The integration of phishing-resistant device trust on my authentication processes is that I don't want to mix the two together. OneLogin by One Identity is, to me, a case where phishing should be managed through other services rather than OneLogin by One Identity. OneLogin by One Identity is, in my mind, an identity and access management solution. It's not an email security management solution.

“From a user perspective, with the right amount of training and documentation, OneLogin by One Identity provides a very seamless end-user experience for signing in and authenticating to needed applications. They're simply logging into an application like Citrix in the good old days, and once you get into the MetaFrame, you launch your app. OneLogin by One Identity is the same. Once you log into OneLogin by One Identity, you have all your apps in a single form or single page.

“I wasn't involved in the decision-making for pricing, setup cost, and licensing for OneLogin by One Identity..”

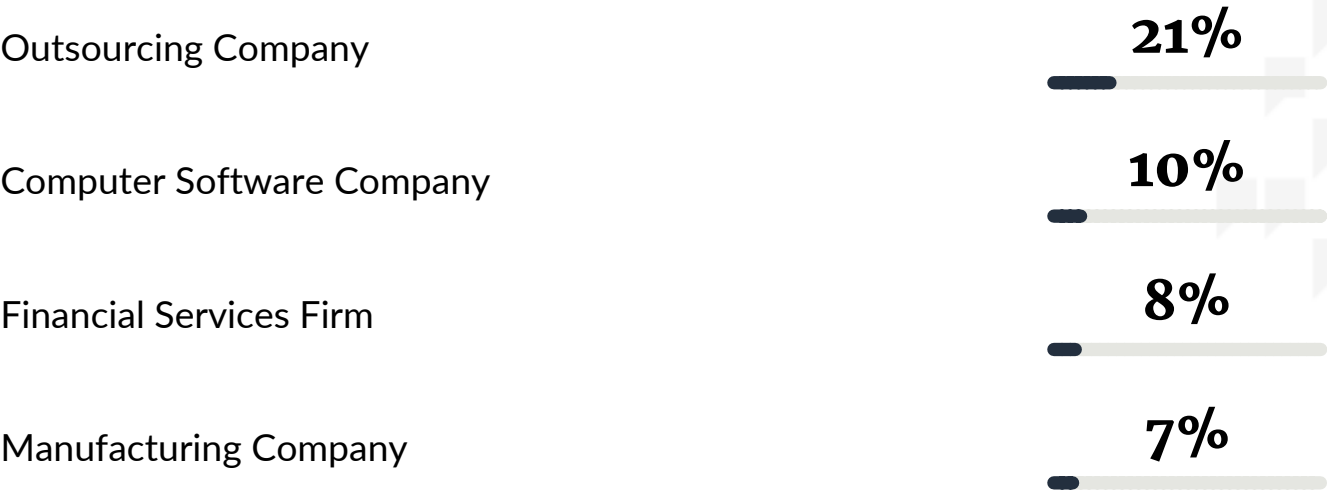

Schakravarty Chakrabarti

Director of Information Technology Canada at a retailer with 1,001-5,000 employees

About PeerSpot

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
