“The AI is the most valuable feature.”

“It is very easy to make changes in the script and works well with other programs as well.”

Zaynah Danquah

“Synthesia provides the ability to have the characters say nearly anything that you need them to, and its pronunciation library gives the absolute correct pronunciation that you need for any number of words. It allowed our characters to see the name of the company correctly without a lot of shortcuts or workarounds..”

“The feature I find most valuable is animation. Compared to other AI tools I've used, like Kaspersky and others, they lack the flexibility and automation that this tool offers. It really enhances the aesthetics of my projects and allows me to be more creative, unlike those other products which are quite rigid and limited in what they can do.

“Synthesia is very good for internal training and messaging as it saves time. Previously, for me to create an asset, I needed to use several resources, including actors, studios, and lighting, all of which took considerable planning.

With Synthesia, it is easier. It has a wide range of digital actors, integrates with generative AI solutions such as ChatGPT, and continues to evolve with new features such as its new translation tool. This makes distribution to diverse audiences much simpler..”

Daniel Baker

Head of Evangelism at a tech vendor with 51-200 employees

“Before Synthesia, recording a 20-minute script could take about one to two days. I had to review the recording to find background noise and edit it. If any change was identified, I had to redo the project. However, with Synthesia, I can have a recording within 20 minutes. It would only need minor tweaks. You could tell the difference between AI recording and human recording, but it improved the course of time in which we made the recording. Our Japanese customers didn't believe that it was AI voice.

The tool's most valuable feature is quickly converting text into a usable audio format. It converts quality text to audio with an accent appropriate for regional dialects. .”

Fraser Gordon

Senior Content Developer at Kinaxis

“It offers several significant advantages over working with human presenters. When creating learning templates with humans, you often face challenges such as multiple takes, script errors, and discomfort in front of the camera. With this solution, you can select avatars, write scripts, and ensure flawless delivery, eliminating these issues. There is no need for post-production as the content is ready to be shared as soon as it's created. It enables to easily modify the content, and the original link will be automatically updated. This is a significant improvement over the traditional approach, where errors or updates necessitate taking down content, re-recording, and reposting. Another remarkable aspect is its user-friendliness. It's so straightforward that I believe most people could use it right out of the gate. Personally, I started using it without any prior research or watching tutorial videos, and it was remarkably intuitive and easy to navigate..”

Other Solutions Considered

“I used a program that is very similar to Synthesia called D-IB, which was a lot easier to use. Though D-IB didn't have as many features and content as Synthesia, its avatars were a little bit more authentic and looked a little more real..”

Forrest McFeeters

Instructional Designer IV at SOLERSrg

“Previously, we used to create video content ourselves, and we still do on occasion. This manual process came with its share of challenges, including lighting issues, sound problems, and the need for post-production work using Adobe Premiere. We also utilized a tool called XSplit for recording, but it was often overly complex..”

I think that my company wants to find that perfect fine line so as not to overuse the solution since we don't want people not to find it to be special anymore..”

“I use it to create training videos. Many of my clients provide me with written content that they want to convert into video format. Some companies provide PowerPoint presentations, while others give me scripts to turn into videos. Clients contact me to produce videos based on their content. But I've also used it for creating TikTok videos, social media content, and even commercial videos and testing..”

“There is no installation required. It's a web-based, SaaS product. We just log on to the portal. It is also super easy to use. What's my experience with pricing, setup cost, and licensing? The solution is cost-effective and relatively cheap. I also believe the product is coming out with new personal and enterprise packages.

I've only used it to evaluate. If I were to recommend it to someone, I don't think that the cost of the product would be a detractor..”

“In terms of the product's initial setup, I can say that it is extremely user-friendly. I think you can quickly learn the basics in Synthesia, and as you play around with the tool, you can get a little bit fancier, so in my case, I like to incorporate music when I edit and use videos in the background. You can use images and videos from other sources, so you are not tied into Synthesia's videos and images.

The solution is deployed on the cloud. I use a username and password to access the tool..”

“In the beginning, it was kind of a learning curve trying to get that pipeline set up correctly.

But once it was set up, overall, it was okay.

We have some issues with the templating now. So I would like to see the templating definitely improved with it because some of the templates really screw up our process.

If it has some kind of intelligence to understand, like, how many slides there had to be, how many things like that if it could kind of be a little bit more dynamic, so you don't have to create all the templates with exactly the correct amount of slides to begin with for it to be able to understand what to do.

If it could dynamically say, "Okay, I could see that you have 18 slides, obviously. We're gonna need 18 slides for this," and that kind of templating format was kind of tricky at first. But once we got it down, it would make it a lot easier after some time..”

Customer Service and Support

Other Advice

“I would advise other users to play around with it for a while. It might seem basic, but you can create high-quality content with it. Keep using it for different types of activities or learning opportunities.

Overall, I would rate the solution nine out of ten. It is really great product for it has to offer. .”

“I was suggested to make use of Synthesia's diction features. It definitely occurs at times when a pronunciation will not be what you want it to be, and Synthesia's diction feature turns out to be a great component because you can just type in what you want a word to sound like.

I love the tool, but I still think it has potential for improvement, so I rate the overall product a nine out of ten..”

“Synthesia was deployed on-cloud in our organization.

I would ask users to give it some time, look at all of the features that Synthesia offers, and be very open-minded. Also, it's best not to let a technical person

evaluate Synthesia. Instead, let someone who is in video production or graphic design evaluate it because they are the ones who will understand the full capabilities of the tool.

Overall, I rate Synthesia a nine out of ten..”

Sean Donovan

Instructional Designer at a tech services company with 501-1,000 employees

“Definitely see if you can get some test development credit to do that if Synthesia has any improvements along that side. That would be helpful.

When we were trying the product early on, Synthesia didn't have as much templating, but maybe they've got some of this worked out by now. I haven't used it extensively in the last probably six months, so I can't say anything new that they've done, but I would definitely ask about templating and test development credit.

Just make sure you know how to use templating, how to use the test resources, and how to use the automated pipeline with Google Slides. Those are the three big things.

Overall, I would rate it a seven out of ten. .”

Mark Kim

Technical Content Developer at Snowflake Computing

“I will request this from them, depending on their enterprise focus. We are a

sizable organization, and I would like to see if they can provide a solution tailored to enterprises. We have been using their platform for remote video production in our central installation business, and it has proven to be cost-effective. It has complemented our cost-saving efforts, as we used to spend a significant amount on both remote and on-premises solutions. Transitioning to their platform has been smooth, and it has worked well for us. If it continues to perform as expected, it might make sense to reduce our dependence on other HES platforms.

Overall I would rate it a nine out of ten.

“I have used the solution for a couple of projects. It's a product that I actively follow. It has some really strong points, but it has some slight issues as well.

Everything that Synthesia is doing can be done with other tools, but the beauty of this product is that it is all collated into a nice, easy to use package. The product impressed me because it wasn't a huge learning curve. Simply type the script, choose your avatar and the tool generates the content. This is invaluable for smaller organizations that do not have the budget, time, or resources to bring in real-life actors and means that changes can be made on the fly and not require costly reproduction. I would recommend this product for evaluation; it is not ready for every project but would be my go-to solution in cases where digital actors (and their associated quirks) were deemed acceptable. Remember, digital actors require lots of back-end processing, yes the models could be refined, but this would require more resources and ultimately reflect in elevated subscription pricing.

The software is a game changer and deserves all of the hype and praise it gets on social media. The tool is invaluable for companies that can't afford a studio or perhaps need to change content on the fly, especially in learning and development.

The digital actors are not quite on par with human actors, which we would expect.

Overall, I rate the tool a nine out of ten..”
