Product Recap

Check Point Email Security (formerly Harmony Email & Collaboration)

Check Point Email Security (formerly Harmony Email & Collaboration) Recap

Check Point Harmony Email & Collaboration provides AI-powered security features for email and collaboration platforms, integrating with Microsoft 365 for comprehensive protection against phishing and malware threats.

Designed for seamless deployment, Check Point Harmony Email & Collaboration offers advanced protection with minimal false positives. Users benefit from real-time alerts, granular threat analysis, and intuitive operation. It supports API-based email security, ensuring safe communication channels and data protection. While it integrates smoothly with Microsoft 365, improvements in dashboard usability, stability, false positive reduction, and expanded integrations with non-Microsoft platforms can enhance the experience.

What are the key features of Check Point Harmony Email & Collaboration?

- **AI-Powered Threat Intelligence:** Utilizes machine learning to detect and prevent emerging threats.
- **Seamless Office 365 Integration:** Offers easy deployment and integration with Microsoft's suite.
- **Zero-Day Attack Prevention:** Protects against unknown vulnerabilities with advanced sandboxing.
- **Robust Phishing Protection:** Employs comprehensive techniques to block phishing attempts.
- **Advanced Sandboxing:** Analyzes potential threats in a controlled environment to prevent breaches.
- **Comprehensive Dashboards:** Provides insights with real-time threat monitoring and analysis.

What benefits or ROI should be considered?

- **Ease of Deployment:** Simple setup process with minimal disruption to operations.
- **Cost-Effective Security:** Reduces potential breach costs with proactive threat prevention.
- **Reduced False Positives:** Minimizes unnecessary alerts, allowing teams to focus on real threats.
- **Enhanced Threat Visibility:** Real-time analytics offer deeper understanding of security landscape.

In finance, healthcare, and education industries, Check Point Harmony Email & Collaboration is deployed to safeguard sensitive information and ensure unrestricted communication flow.

These sectors value its ability to block suspicious emails, prevent data loss, and maintain compliance with industry regulations.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

- ✓ “Check Point has made my threat prevention better; it has helped me avoid having to redo machines and has helped protect our data by not letting unauthorized items through.”

Derek Schneider

Manager, Information Technology at a hospitality company with 201-500 employees

- ✓ “Over these eighteen months I have been working with the product, it has been very stable, and I would recommend it to most of my peers who have issues related to the email security piece.”

Mohan Janarthanan

Associate Vice President at Novac Technology Solutions

- ✓ “The deployment itself is quite seamless; you can use their temporary licenses for the deployment, just for testing.”

ErezZelikovitz

E VP, Chief Product And Revenue Officer at a tech services company with 51-200 employees

- ✓ “Robust inspection technologies have proven valuable in safeguarding shared files in collaborative environments by analyzing patterns and identifying potential threats.”

Pratik_Savla

Security and Compliance Architect at a manufacturing company with 1,001-5,000 employees

- ✓ “The incorporated AI capabilities are particularly notable, functioning as AI versus AI, and it has protected us from various threats with a nice dashboard that shows if anything is missed by MS 365.”

Nasseer Qureshi

Pre Sales Consultant at Redington Group

- ✓ “After we organized it with the consulting company and set the first rules, after one week the system seemed to have learned the company's pattern, and we managed to achieve a reduction of almost eighty to ninety percent on spam and false emails, which was very good at the time.”

ThiagoRibeiro

Cloud And Integration Coe Architect at Reply

“The advanced phishing protection is proactive in catching threats before users even see them; it does not just block obvious spam, it can spot subtle impersonation attempts and suspicious links that appear legitimate at first glance.”

Ruben Ruiz

Sr. VP of Creative & Development at a non-tech company with 51-200 employees

What users had to say about valuable features:

“Check Point Email Security (formerly Harmony Email & Collaboration) is part of a package we are using, Check Point CloudGuard, which includes several blades, and each blade can do a different security job.

The time spent on the deployment process isn't just about Check Point Email Security (formerly Harmony Email & Collaboration); it's part of a full stack of capabilities including a firewall, anti-spam, anti-bot, IDS, and IPS.

One of our customers operated the automated incident response feature.

We use real-time URL reputation analysis through URL filtering, which is one of the blades. .”

ErezZelikovitz

E VP, Chief Product And Revenue Officer at a tech services company with 51-200 employees

[Read full review](#) 

“The best feature Check Point Email Security (formerly Harmony Email & Collaboration) offers is that it automatically blocks suspicious accounts.

“That is the main highlight for me regarding the features of Check Point Email Security (formerly Harmony Email & Collaboration).

“Check Point Email Security (formerly Harmony Email & Collaboration) has positively impacted my organization by making us stress-free. If any account is compromised, it will automatically block it, and we will not receive any spam emails or anything, which will be very helpful.

“We did not receive any unsecured email, which is very beneficial for us, so we cannot get any malware or viruses in our organization..”

Verified user

SR system engineer at a retailer with 11-50 employees

[Read full review](#) 

“The best features that Check Point Email Security (formerly Harmony Email & Collaboration) offers include the ThreatCloud AI engine stack, zero-day sandboxing protection, advanced anti-phishing and anti-impersonation, and a clean dashboard.

“Check Point Email Security (formerly Harmony Email & Collaboration) has impacted my organization positively since there are no DLP issues or data loss. It prevents data loss and manages phishing protection effectively by using analytics to deep dive into specific threat categories. The anti-phishing and impersonation features catch subtle impersonation attempts and suspicious-looking links before users can see them, not just obvious spam.

“I have seen a reduction in phishing incidents and data leaks since every document is scanned before it goes out or comes in. In terms of phishing, the protection is proactive because it catches impersonation attempts and suspicious-looking links before users get to see them, so it has reduced the number of phishing incidents in my organization..”

GeorgeKamau

Technical Presales Engineer at Tano Digital Solutions Group

[Read full review](#) 

“The automated incident response part aids my security strategy. We create actions with the automation piece, and our centralized incident management team follows incidents. We forward the logs to our SIEM logs where our SOC team operates 24/7 to monitor incident management end-to-end.

AI-powered threat intelligence helps to block email threats in my case. Previously, it was not there, but now they have added this feature, and they excel at this advanced AI part. Check Point Email Security (formerly Harmony Email & Collaboration) protects my blogs and email threats before they reach my inbox through a feature they call ThreatCloud.

I use real-time URL reputation analysis in the product as sandboxing technology. For example, when some users click on a URL, it will redirect to a zero-phishing page where suspicious files and mails can be blocked. This prevents impact on my environment because it redirects directly to the sandboxing environment, and it is a great technology we are using.

Inspection technologies safeguard my shared files, as this is one of the major use cases. I also utilize an important use case known as grey mail. The grey email box is a great technology that allows us to control promotional emails. For instance, if someone sends an email claiming a \$500 prize, it often falls into spam and can be clicked unwittingly. The team protects against such unwanted mails, which frequently include promotions that users may miss or mix with genuine emails. This categorization needs to happen to manage delivery effectively.

Check Point Email Security (formerly Harmony Email & Collaboration) has a positive impact on phishing attack mitigation, and the mitigation part works well. That is why, after evaluating the product, we went for live deployment since we use it majorly for our group companies. This is a very important use case for us..”

Mohan Janarthanan

Associate Vice President at Novac Technology Solutions

[Read full review](#) 

“We have been using Check Point Email Security (formerly Harmony Email & Collaboration) for over one year and have had a very positive experience with its security capabilities and ease of management.

Check Point Email Security (formerly Harmony Email & Collaboration) has had a positive impact by significantly reducing the number of phishing, malware, and BEC attempts that reach end-users. This has lowered the risk of credential theft and other email-based attacks. It has also improved our security team's efficiency by automating threat detection, quarantining, and alerting, which reduces manual effort. The centralized dashboard gives us better visibility into email threats, making investigations and reporting much faster. Overall, it has strengthened our email security posture while allowing users to work with fewer security-related disruptions.

The best features of Check Point Email Security (formerly Harmony Email & Collaboration), in my opinion, are AI-powered phishing and BEC protection, ThreatCloud intelligence, advanced URL and attachment protection, easy integration with Microsoft 365 and Google Workspace, centralized management and reporting, and automated threat response. The feature I rely on the most is the AI-powered phishing and BEC protection. Email remains one of the most common attack vectors, and phishing campaigns are becoming increasingly sophisticated. This feature does an excellent job of identifying suspicious emails based on sender behavior, content, URLs, and other indicators before they reach users.

One aspect I really appreciate is how all the features work together rather than as separate components. The AI-powered detection, ThreatCloud intelligence, URL and attachment protection, and centralized management provide layered security. I also appreciate that the solution is cloud-native, integrates well with Microsoft 365, and requires minimal administrative overhead..”

Abuzar Khan

Cybersecurity Engineer at Gigabit Technologies Pvt Ltd

[Read full review](#) 

“One valuable feature is the easy deployment because of the API-based deployment structure. The most important feature is that it can scan emails already in the user email box and automatically removes malicious emails. If in my organization 100 plus users received a phishing email, it automatically detects and removes it from their email boxes. Another pro is the excellent phishing detection system. Business Email Compromise protection is another advantage that I already mentioned. The integration is very strong with Google Workspace, as it works with Gmail, Google Drive, Google Chat, and Google Calendar. Unlike other solutions that only inspect SMTP traffic, this product can work with all Google solutions, including Google Drive and Chat.

“Automatic remediation is available in this product. Incident investigation can be performed by viewing the attack timeline, identifying affected users, analyzing sender reputation, and inspecting URLs. We can search for Indicators of Compromise, malicious IP addresses, domain URLs, and other threats. Integration with our SIEM solution is very easy, as it can create tickets automatically and trigger playbooks with our Wazuh SIEM.

“Naturally, because it is an AI-powered detection system, standard email gateways cannot find malware as easily. It can detect phishing emails, even those that do not contain known malware. It detects language, analyzes writing style, and identifies social engineering attacks because of the AI features.

“This capability was helpful to us. We can see the reputation of domains, especially in our business development department, as they receive many phishing emails. We can see sender reputation, sender domain reputation, and spam history from those senders. It is easy to find look-alike domains and cousin domains, and we can easily detect those attacks. URL reputation analysis is also available. Overall, Check Point Email Security (formerly Harmony Email & Collaboration) is very easy to deploy, but there is a learning curve for my IT administrators. This is not unique to this product, as every product has a learning curve. Policies must be deployed, and detection settings must be configured. The Check Point vendor helped us deploy all of these elements by explaining the best optimized settings, how to use incident investigations, and how to create reports and reporting dashboards..”

Other Solutions Considered

“We did not use any other solution. Once we decided to secure our M365 environment, I researched and found that this product is very good and I purchased it..”

Verified user

SR system engineer at a retailer with 11-50 employees

[Read full review](#) 

“In the past, I have worked with Fortinet but less with Palo Alto. With Fortinet, my involvement included both security and developing an SD-WAN SASE solution, as we deployed Check Point in the cloud, which was the solution provided to our customers..”

ErezZelikovitz

E VP, Chief Product And Revenue Officer at a tech services company with 51-200 employees

[Read full review](#) 

“Other than Check Point, I did not evaluate other options or vendors extensively. I played a little bit with Acronis, which has a similar solution, but I had only done tests with it. They are mainly a backup solution but have also expanded into other services. Comparing Check Point Harmony Email & Collaboration to Acronis, Acronis still has a couple of improvements to do, but Check Point Harmony Email & Collaboration works pretty well on the detection of emails..”

ThiagoRibeiro

Cloud And Integration Coe Architect at Reply

[Read full review](#) 

“For AWS, we are not using any email security solution. We are using Bitdefender and currently have more than 1,100 licenses. In the firewall, we are using pfSense by Netgate. We use different solutions for different purposes. For SIEM, we are using Wazuh. For backup, we are using Acronis. For storage, we are using Synology NAS..”

Harish (Kumar)

Cybersecurity And Information Governance Head at Aeren

[Read full review](#) 

“We are using Fortinet firewalls and ZTNA. For vulnerability management, we are considering a solution such as Lacework, which I understand is a SIEM solution. We are also using Check Point Harmony Email & Collaboration, specifically Check Point Email Gateway..”

SreejeshSoman

[Read full review](#) 

Technical Consultant at Vertex Techno Solutions (B) Pvt Ltd

“I represent other brands including Check Point and Palo Alto. Several brands are represented by our company because we are more than just the sales boxes of products—we are a consulting company as well. Depending on the customer necessity, we can find a solution for that customer based on what they want, what they need, and the cost that they are able to spend.

For a small company, I do not think Check Point Harmony Email & Collaboration is the best fit because small companies are always looking for a cheaper product. However, for medium and larger companies, it is better..”

ROI

Real user quotes about their ROI:

“I observe that it is possible to see ROI with Check Point Email Security (formerly Harmony Email & Collaboration); you will definitely get results in nine to ten months..”

Mohan Janarthanan

Associate Vice President at Novac Technology Solutions

[Read full review](#) 

“In terms of ROI, Check Point Harmony Email & Collaboration effectively brings ROI to my clients. It suits both SMB and enterprise customers because it is an affordable solution that performs well, resulting in satisfied customers..”

Verified user

Cyber Security Engineer at a retailer with 201-500 employees

[Read full review](#) 

“I have definitely seen a return on investment since using Check Point Harmony Email & Collaboration because it does an amazing job at catching malicious emails without us having to do anything and without any input from our team..”

Verified user

[Read full review](#) 

Security Engineer at a government with 51-200 employees

“I have definitely seen a return on investment with Check Point Harmony Email & Collaboration. On the administrative side, both my team and I used to spend much less time troubleshooting phishing, malware, and other email-related issues because of that solution. We gained much more time to address other issues beyond troubleshooting..”

ThiagoRibeiro

[Read full review](#) 

Cloud And Integration Coe Architect at Reply

“This solution cannot generate business. It is a safeguard or guardrail for our email solution. It is expensive, without doubt. However, if we compare it with other solutions such as Proofpoint, Mimecast, or Cisco, those are more expensive. Barracuda is less expensive, but Proofpoint is the enterprise leader and is more expensive than Check Point Email Security (formerly Harmony Email & Collaboration)..”

Harish (Kumar)

[Read full review](#) 

Cybersecurity And Information Governance Head at Aeren

“Measuring ROI for Check Point Harmony Email & Collaboration is quite difficult due to the nature of security solutions, but Check Point Harmony Email & Collaboration's ROI is much better than other OEMs because it secures our network and reduces the number of attacks. If I would measure it in percentage, I believe attacks have reduced by around thirty percent based on the effectiveness of the solution..”

SreejeshSoman

Technical Consultant at Vertex Techno Solutions (B) Pvt Ltd

[Read full review](#) 

Use Case

“The primary use case for Check Point Email Security (formerly Harmony Email & Collaboration) is to protect our organization's email environment from phishing, malware, ransomware, business email compromise (BEC), and other advanced email-based threats. We use it to secure both inbound and outbound email traffic, ensuring safe communication across the organization..”

Abuzar Khan

Cybersecurity Engineer at Gigabit Technologies Pvt Ltd

[Read full review](#) 

“The major use case for Check Point Email Security (formerly Harmony Email & Collaboration) was Business Email Compromise, CEO fraud, and vendor impersonation. Phishing attacks were also a major issue, as sophisticated phishing attacks are occurring nowadays. This solution is not a traditional solution but rather an API-based deployment, which made it easy to deploy without disruption of any email flow. When we deployed it, it was completed within a day, and within a few minutes of that process..”

Harish (Kumar)

Cybersecurity And Information Governance Head at Aeren

[Read full review](#) 

“I have been using Check Point Email Security (formerly Harmony Email & Collaboration) for the last two years.

“My main use case for Check Point Email Security (formerly Harmony Email & Collaboration) is to protect my emails and M365 accounts.

“I am using Check Point Email Security (formerly Harmony Email & Collaboration) to secure my M365 account exclusively..”

Verified user

SR system engineer at a retailer with 11-50 employees

[Read full review](#) 

“I work with a cloud deployment model and we are using their SaaS solution.

The deployment itself is quite seamless; you can use their temporary licenses for the deployment, just for testing. If I remember correctly, it's a three-month free of charge license, then you have to purchase the license from one of their distributors, which is quite an easy process. Basically, we are reselling the solution of Check Point.

The time spent on the deployment process isn't just about Check Point Email Security (formerly Harmony Email & Collaboration); it's part of a full stack of capabilities including a firewall, anti-spam, anti-bot, IDS, and IPS. The installation itself on a virtual machine takes less than an hour, and it's quite easy.
.”

ErezZelikovitz

E VP, Chief Product And Revenue Officer at a tech services company with 51-200 employees

[Read full review](#) 

“I use Check Point Email Security (formerly Harmony Email & Collaboration) for protecting my phishing email against my critical users, and it acts as a critical email gateway. I have MS 365 and reroute the traffic to Check Point Email Security (formerly Harmony Email & Collaboration).

From my personal experience, the biggest advantage of the product is its protection against phishing and the significance of safeguarding my business email from compromise. My CFO and CEO are the targets for phishing mails, so protecting against these threats is very important and critical. If email is compromised, they can control access and gain complete visibility. Email is one of the weakest links people often check and use, making it the easiest way to hack, so protecting against it is crucial..”

Mohan Janarthanan

Associate Vice President at Novac Technology Solutions

[Read full review](#) 

“The main use case for Check Point Email Security (formerly Harmony Email & Collaboration) is phishing protection from anti-malware, account takeover, and data loss prevention.

“A typical phishing scenario is when an attacker sends a BEC style email, a domain look-alike asking finance to urgently process a wire transfer. In terms of DLP protection, an employee attaches a spreadsheet containing customer ID numbers, card details, and emails either to a personal Gmail account or shares it via a OneDrive link with anyone with the link. Check Point Email Security (formerly Harmony Email & Collaboration) DLP engine scans outbound mail and file sharing events using pattern matching or prebuilt compliance templates..”

GeorgeKamau

Technical Presales Engineer at Tano Digital Solutions Group

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“The initial setup process for Check Point Harmony Email & Collaboration was pretty easy to set up on the Microsoft side, both for the proof of concept and for the production environment..”

ThiagoRibeiro

Cloud And Integration Coe Architect at Reply

[Read full review](#) 

“In most cases, phishing emails are identified and removed within seconds. If we were getting 100 phishing emails before deploying Check Point Email Security (formerly Harmony Email & Collaboration), after deployment that number was reduced to 15. This represents 85 percent efficiency..”

Harish (Kumar)

Cybersecurity And Information Governance Head at Aeren

[Read full review](#) 

“My experience with the initial setup and deployment process of Check Point Harmony Email & Collaboration is that it is minimalized, completing in fifteen minutes. However, since it is AI-based, it requires one day to synchronize and learn all mailboxes before policy setup can begin..”

Verified user

[Read full review](#) 

Cyber Security Engineer at a retailer with 201-500 employees

“The initial setup was relatively straightforward, especially because it is a cloud-native solution. We integrated it with our Microsoft 365 by configuring the required permissions and base security policies. Check Point provides clear documentation and deployment guides, which made the process smooth. Most of the effort was in validating the configuration, fine-tuning policies to match our organization's requirements, and testing to ensure legitimate emails were not blocked. Overall, I would describe it as efficient and much simpler than deploying a traditional on-premises email security gateway..”

Abuzar Khan

[Read full review](#) 

Cybersecurity Engineer at Gigabit Technologies Pvt Ltd

“Setup is very simple since it is API based. I do not require anything. I just have to enter the credential of Microsoft tenant ID and password or Google super admin username and password and the process is very simple due to artificial intelligence and machine learning technology. It will implement automatically. If I have some knowledge, I can implement the policies and have custom policies as well. In DLP, they have given already many pre-configured policies for data loss prevention. Apart from that, if I would like to have my own policy, they also give that facility where I can put my own policy..”

PRADIPJOSHI

[Read full review](#) 

Owner at Shree Atharva Sales Corporation

“In terms of the deployment model, it varies case by case; mostly, we deploy it on the cloud, but some customers might have specific requirements. Usually, we suggest deploying on Check Point Harmony Email & Collaboration's cloud or AWS due to better implementation capabilities.

“The deployment for Check Point Harmony Email & Collaboration is complex and not straightforward. The biggest challenge in deploying the product is setting up the dashboard for customer use cases, as that customization is more complicated compared to other solutions..”

SreejeshSoman

[Read full review](#) 

Technical Consultant at Vertex Techno Solutions (B) Pvt Ltd

Customer Service and Support

“The customer support for Check Point Harmony Email & Collaboration has been excellent; they have been very proactive in adding new features and helping with any issues..”

Verified user

Security Engineer at a government with 51-200 employees

[Read full review](#) 

“They have TAC that can help, and you can open a case for assistance. We are in Israel, so they have Hebrew speakers, which makes it quite easy, and we received good support.

I would rate the support of Check Point at eight. .”

ErezZelikovitz

E VP, Chief Product And Revenue Officer at a tech services company with 51-200 employees

[Read full review](#) 

“I rate the technical support by Check Point as one out of ten because I did not use Check Point support as we had no problems when we deployed the solution. Once the solution was already in production, it worked properly and never failed. To be honest, I have never worked with Check Point support..”

EmilioPalma

Cybersecurity & Networking Professional at Quantic Technology

[Read full review](#) 

“The customer support for Check Point Email Security (formerly Harmony Email & Collaboration) is good.

“I would rate the customer support a 10 out of 10..”

Verified user

[Read full review](#) 

“Overall, my experience with Check Point support has been positive. We have not needed to contact them frequently because the platform has been stable, but on the occasions we did, the support team was responsive and knowledgeable. They helped troubleshoot configuration and policy-related questions and provided clear guidance along with their relevant documentation and knowledge base articles..”

Abuzar Khan

Cybersecurity Engineer at Gigabit Technologies Pvt Ltd

[Read full review](#) 

“I mostly communicated with the consultants representing Check Point rather than with their technical support. I only communicated with them mostly about the firewall side, not Harmony, for most things. After everything was set up and in production, my communication was mainly for improvements and questions about new functionalities that were introduced later.

“I did not have such serious issues that required me to reach out to technical support or customer support for Check Point Harmony Email & Collaboration. The one time was when a user was looking for some emails that were not arriving. When we checked on Check Point Harmony Email & Collaboration, we discovered the issue was on the Microsoft side, which was blocking the email. However, since Harmony integrates well with the security services of Microsoft, we can unblock those emails directly from Harmony..”

ThiagoRibeiro

Cloud And Integration Coe Architect at Reply

[Read full review](#) 

Other Advice

“Check Point Email Security (formerly Harmony Email & Collaboration) has made my life easier in terms of email security, and it covers all the items that I have discussed. I would rate Check Point Email Security (formerly Harmony Email & Collaboration) a seven out of ten..”

GeorgeKamau

Technical Presales Engineer at Tano Digital Solutions Group

[Read full review](#) 

“I have not used the AI-powered threat intelligence feature for blocking email threats; I know they are working on integrating AI capabilities into the system, and I believe they will introduce it in the next versions, but that is not something I have experienced..”

ErezZelikovitz

E VP, Chief Product And Revenue Officer at a tech services company with 51-200 employees

[Read full review](#) 

“Check Point Email Security (formerly Harmony Email & Collaboration) saves me about five to ten percent of time, as I previously spent considerable time with my teams on email protection.

I gave this review a rating of nine out of ten..”

Mohan Janarthanan

Associate Vice President at Novac Technology Solutions

[Read full review](#) 

“The data privacy challenge is significant because Check Point Email Security (formerly Harmony Email & Collaboration) is not a traditional in-line solution. It connects with Google Workspace using API permission and can access email, attachments, sender, recipient information, links, and all metadata is with Check Point. Data storage and everything else is with Check Point, which is the challenge. The overall review rating for this product is eight out of ten..”

Harish (Kumar)

Cybersecurity And Information Governance Head at Aeren

[Read full review](#) 

“Check Point Email Security (formerly Harmony Email & Collaboration) is currently the very best product. It has all the features we need based on current technology, and I am completely surprised by some of its features, making it a very mature product.

“Check Point Email Security (formerly Harmony Email & Collaboration) follows all the governance and security standards, and it is the very best.

“Regarding Check Point Email Security's AI capabilities, all things will be good in

terms of accuracy and reliability of output.

“If you want to go with an advanced security solution for your M365 accounts, you can go with Check Point Email Security (formerly Harmony Email & Collaboration). This is very beneficial. You can connect your admin and authorize the app, accessing all your data. Check Point Email Security (formerly Harmony Email & Collaboration) will secure all your data, emails, collaboration, and accounts. If any account is compromised or shows unusual behavior, it will detect it and automatically block it. That feature is very good, and you can go through it as it is a very best product.

“I give this product an overall rating of 10 out of 10..”

Verified user

SR system engineer at a retailer with 11-50 employees

[Read full review](#) 

“My advice would be to start by understanding your organization's email security requirements and the planned deployment carefully. Take the time to configure and fine-tune your security policies during the initial rollout to balance strong protection with minimal impact on legitimate business emails. I also recommend running the solution in monitoring or audit mode where possible before enforcing strict policies, so you can identify any false positives and make adjustments.

A good example was when Check Point Email Security (formerly Harmony Email & Collaboration) detected and blocked a sophisticated phishing campaign targeting multiple employees. The email closely mimicked a trusted vendor attempting to steal Microsoft 365 credentials through a fake login page. The solution's AI-powered phishing detection identified the malicious indicators and quarantined the emails before they reached users' inboxes. The incident was clearly visible in the management console, allowing our security team to review the attack, confirm that no accounts were compromised, and quickly notify the users.

In addition to protecting against phishing and malware, Check Point Email Security (formerly Harmony Email & Collaboration) provides URL and attachment analysis, business email compromise protection, and monitoring of suspicious email activity. It provides centralized visibility into email threats, making it easier to investigate incidents and fine-tune security policies. The standard features include AI-powered phishing and business email protection, business email compromise protection, advanced URL and attachment analysis with sandboxing, ThreatCloud threat intelligence, seamless Microsoft 365 integration, centralized management, and detailed reporting.

I would rate this solution a nine out of ten overall..”
