Collibra Platform

Collibra Platform Recap

Collibra Platform is preferred for workflows, data lineage, and a user-friendly interface. It enhances metadata management with robust collaboration, flexible customization, and powerful reporting, aiding organizations in effective data management.

Collibra Platform provides dependable solutions for metadata management, data lineage, and governance. It strengthens data governance with cataloging, glossaries, automation, and integration, supporting compliance and data quality management. Despite challenges with integration and metadata ingestion, the platform is vital for data governance programs, offering comprehensive AI capabilities and streamlined processes for enterprise data management.

What are Collibra Platform's key features?

- **Workflows:** Enhances process efficiency with customizable workflows.
- **Data Lineage:** Tracks data movement across systems for accountability.
- **User-friendly Interface:** Simplifies interaction with intuitive design.
- **Metadata Management:** Manages and organizes metadata for better insights.
- **Collaboration Features:** Fosters teamwork with integrated tools.
- **Cataloging and Glossary:** Improves governance and traceability.

What benefits should be sought in reviews?

- **Improved Business Processes:** Drives efficiency with automation and customization.
- **Enhanced Data Governance:** Facilitates compliance with comprehensive traceability tools.
- **Robust Integration:** Ensures seamless data flow across various systems.
- **Advanced Reporting:** Provides insights for data-driven decisions.

In industries, Collibra Platform supports IT teams through metadata management and data quality assurance. It is widely used for compliance initiatives like GDPR, speeding up digital transformation and enforcing policy management. Organizations employ it to consolidate business and technical metadata, ensuring effective enterprise-scale data management in diverse sectors.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

“Collibra Platform has increased the discoverability and productivity of employees by at least 30 percent, which is great.”

Aditi Kamra

Senior Consultant at Morgan Stanley

“Through the business glossary, the data discovery time, such as the data search time gets reduced by almost 50%.”

Souvik Choudhury

Data Governance And Quality Consultant at a consultancy with 1,001-5,000 employees

“Collibra Platform has had a positive impact on structure, transparency, and alignment around data in my organization.”

Verified user

Master Data Manager at a recruiting/HR firm with 51-200 employees

“Collibra Platform has impacted my organization positively because it provides comprehensive data governance functionalities for enterprises.”

Sharonquispe Crisa

Data Analyst at Banco Bci

“Collibra Platform provides a great user experience for the first time someone is entering Collibra Platform, as they have a few things that are already packaged for you, so you don't have to start from scratch.”

Shivayadav Yato

Software Engineer at DATAECONOMY

“We have seen a return on investment, as previously it took weeks or even months to find the actual data owner, while now it takes just seconds or a few minutes, indicating a significant increase.”

Verified user

Senior IT Consultant at a tech services company with 201-500 employees

“Collibra Platform has positively impacted my organization in all the ways I mentioned, as the benefits and user adoption for different data stewards and data custodians were easier because it has a very nice GUI.”

Technical Manager at a recruiting/HR firm with 11-50 employees

What users had to say about valuable features:

“The best features Collibra Platform offers include the business glossary.

“What I appreciate about the business glossary is that it is where all of the key data elements are defined, making it easy to find the understanding of where the data is coming from. You simply search for that data element and then you can see its lineage.

“Collibra Platform has positively impacted my organization by helping identify quicker when we have data quality issues and their root cause. This has made a difference in saving time, reducing errors, and improving decision-making. Once the data quality issue is resolved, management can trust that data..”

Servane Chou

Head Of Risk And Finance Data Governance at Sumitomo Mitsui Banking Corporation – SMBC Group

“Collibra Platform offers an intuitive user interface that allows you to navigate easily even without prior experience. The API functionality for ingesting metadata is also part of the core features.

“When I need to register data sets manually, I can input API credentials and create BigQuery tables, modify schemas, and manage the records of every table through the API. Collibra Platform's APIs are very well documented, which makes the process smooth and motivates me to collaborate more.

“Collibra Platform has impacted my organization positively because it provides comprehensive data governance functionalities for enterprises. It centralizes policies, ownership, business definitions, and rules, resulting in fewer inconsistencies and standardized terminology across the organization..”

Sharonquispe Crisa

“The best features I utilize in Collibra Platform are the data catalog, which serves as a central searchable inventory for data sets. I also use the shopping-like experience under the data marketplace. The data lineage shows end-to-end visibility of the data flow and their dependencies. Business glossaries provide common business definitions. The AI governance feature allows me to work with AI models and agents built on top of it. I also use the data notebook for querying and working with data inside Collibra Platform.

“The most utilized features in Collibra Platform are the data catalog, the data quality and observability, and the data search. I also heavily use data governance workflows and the data marketplace.

“Positively, Collibra Platform has helped me in my day-to-day data governance and data cataloging-related activities, which boils down to faster data discovery of the assets, whether they be technical assets or business assets. There is more trust being added to the data. There is reduced dependency on the SMEs, stewards, or data owners. It breaks down data silos and improves data governance. I have also experienced improved compliance and risk management. There is enablement for data products, which is an additional benefit..”

Senior Data Engineer at a pharma/biotech company with 10,001+ employees

“I think the best feature of Collibra Platform is its easy-to-use UI. It's an integrated platform where we can have an enterprise level of elements catalog assigned to different owners and track the lineage. We also have a business lineage and technical lineage for different types of users, which is really helpful in understanding different use cases in different scenarios. The UI is really easy to use.

Business lineage is important when we are showing this to someone who is at a very senior level and we want them to understand what kind of data we are using and what kind of insights we are deriving, but they are not very versed with the schema or the technical terms related to that dataset. They can understand and clearly see what the dataset is really about and how it is being connected from top to bottom. That's been really helpful. Technical lineage is mostly used by the engineering teams to track the source of the data and to understand if there are any breakages in the data pipelines. That's helpful. The easy to use UI means that if any business user is using it and is not very technical in nature, they are able to quickly pick up at least the glossary part of Collibra Platform and the navigation is also not much. Everything is just right there. It doesn't take much time to get well-versed with it. You just know what to do when you see it.

I have seen return on investment. Basically, earlier the team was cataloging using Excel and there was no automated process. The Excel had to be shared with everyone else and multiple users had to be deployed on that. Now with Collibra Platform, we can use it very quickly. We can share it with multiple users and the users are able to see everything in one space at one time without any glitches and without any changes. It has been really streamlined. The return on investment has been great. I think the employees have become more productive. They are able to take on a lot more work, which is really required. There's a lot of work. Collibra Platform has made the employees 20 to 30 percent more productive. Collibra Platform has increased the discoverability and productivity of employees by at least 30 percent, which is great..”

Aditi Kamra

Senior Consultant at Morgan Stanley

“I think Collibra Platform is a really great tool that is user-friendly, and the person using it does not need much technical background. The user should be smart enough to know data governance rules, but a technical background is not mandatory. For banks, which are heavily regulated with regulations such as Basel IV and GDPR, Collibra Platform proves to be useful for regulators in controlling data. It provides end-to-end traceability and allows us to define exact definitions of certain rules across departments, which brings out the actual value in banking.

The best features Collibra Platform offers include traceability, audit readiness, and making data defensible. It is great for regulatory compliance, clearly showing data lineage, applying access rules, defining a business glossary, and having a data catalog. It also includes workflow automation, which differentiates it from other data lineage tools, and provides data quality monitoring. For me, the top features would be data cataloging and glossary, lineage and workflows, and compliance.

With Collibra Platform, workflow automation allows us to request analysts to access customer transaction data. It can auto-trigger workflows, starting a predefined approval process with step-by-step approvals from the data owner to compliance and IT security. It includes automated checks verifying if data is sensitive or if the user has the required role or training. Access is granted or rejected, and everything is logged, making workflow automation a way to turn governance policy into executable processes.

After implementing Collibra Platform, we maintained a consistent definition for customer balance across all banking departments such as finance, retail, and risk. Earlier, teams had different calculations that led to inconsistent reports. Collibra Platform helps us achieve faster decision-making, improve data trust and accuracy, and reduce conflicting reports. It also provides full transparency of data lineage, where everyone can see the entire lifecycle of the data. After introducing Collibra Platform, our operational efficiency increased, reducing manual processes and cutting data access approval times significantly..”

“Collibra Platform offers best features including a velocity pack where some of the workflows are already provided when you enter into the platform. These are very specific to Collibra Platform, which no other vendors such as Alation or Purview provide. Collibra Platform provides a great user experience for the first time someone is entering Collibra Platform, as they have a few things that are already packaged for you, so you don't have to start from scratch.

Within Collibra Platform, if you go to the documentation section within the workflows, you can find several workflows which you can utilize. These are already present there, which helps you to start from ten to twenty percent rather than starting from zero. These are workflows that help get you ahead.

In terms of features, the UI experience is great, whether it is lineage, governance section, or navigating from one domain to another. It is very useful in terms of the features. The settings sections have multiple options where you can add user groups. Everything is very well configured, and you can change the number of attributes a definition has. It is very configurable in that sense. The UI is also very configurable in terms of what you intend to have, and you can get your logo up on the website.

Improvements in efficiency is one of the outcomes thanks to Collibra Platform because previously users used to search for data and had to wait for a certain amount of time to get a reply from another user. Now with Collibra Platform in place, the user can automatically search for the data and determine whether he or she has access to it. It has become very user-friendly, saving time and energy for the different departments. It has increased cross-departmental support, as people are less reliant on each other because there are certain checks already in place.

When we talk about the impact of Collibra Platform, our company does consulting for other companies. We have some out-of-the-box solutions that we offer, and apart from that, if a client has some requirement, we try to fulfill that in terms of our function as an organization. We are more focused towards providing workflows which require certain skills, and those companies that don't possess those skills reach out to us to get these features onto their platform..”

Collibra Platform really stepped up and we were able to get the licensing at our desired prices. That's why we have used Collibra Platform..”

“There has been a return on investment with Collibra Platform as a tool because you save a lot of money and a lot of headcounts that you would have had to spend on data management professionals if Collibra Platform was not there. More than money saving, the time saving is significant, as whoever is there, Collibra Platform eases their usage of data. A lot of time gets saved in data search, data discovery, and data analysis, which translates into a good return on investment..”

I have seen a return on investment with significant reductions in compliance risk and costs associated with duplicate data..”

Use Case

“My main use case for Collibra Platform is to bring key data elements into data governance compliance, which involves identifying them, prioritizing them, defining them, finding owners, identifying data quality specifications, doing data quality monitoring, and finally lineage.

“A specific example of how I use Collibra Platform for one of those steps is that on a daily basis, I upload data elements or I update data elements via an upload template..”

“My main use case for Collibra Platform is data lineage and data traceability, as it has extensive functionalities around those tasks.

“Collibra Platform is particularly powerful for enterprise data governance. Currently, my company is undergoing a migration process between one database and another, so we use Collibra Platform mostly for data governance tracking.

“When we need to find equivalences between one data platform and another, we can search among data sets and metadata. We can also assign ownership or stewardship..”

“My main use case for Collibra Platform is for a banking client in the Netherlands, who wanted to create a centralized system to organize data assets, define ownership, ensure data quality, and enforce governance policies.

This was for a banking client in the Netherlands, and Collibra Platform is used to govern the customer balance. Without Collibra Platform, we faced issues because retail and risk and finance teams all calculated the balance differently, resulting in inconsistent reports. With Collibra Platform, we defined the correct customer balance in a business glossary and assigned a data owner such as the head of retail or head of finance. It helped us show the lineage from core banking to data warehouse reports and apply access rules, authorizing teams to see sensitive data related to the customer. Basically, it was for reporting, risk analysis, and regulatory compliance..”

“I utilize Collibra Platform for data catalog, data marketplace, and data governance-related activities.

“I have multiple data sources, and I perform extraction of data from those specific data sources. For example, if I have monthly revenue data, I certify those data sources, provide business definitions, and assign a data owner and steward. These products are then added to the data marketplace. I have a customer 360 data product where I host these data products. I also use business glossaries and their data quality capabilities.

“I use Collibra Platform for multiple purposes. One of the most useful use cases is the data lineages, which I primarily use for investigations carried out from Power BI, and then I can trace back to the sources..”

“My main use case for Collibra Platform is that we use it on a day-to-day basis. We configure workflows for clients, and we have multiple clients for which we work. Our task is to manage the metadata of their company or design workflows. These two are the major components that we work with.

One specific example of how I use Collibra Platform for managing metadata or designing workflows is that some people have access to certain information only within the company. We help them configure workflows where only a few people have access to that particular data. Apart from that, whenever they have different definitions across different departments, we help them create a data dictionary and business dictionary within Collibra Platform so their data could be unified.

This is just one of the use cases, as it depends upon the client what they ask for. We have previously worked with data lineage as well, creating policies and AI governance. We have shown them how it could benefit their AI infrastructure. Those are the other core areas we have worked upon..”

Shivayadav Yato

Software Engineer at DATAECONOMY

“The main use case has been drafting business glossaries, data dictionaries, assigning ownerships, and prioritizing data elements.

Once a data element is prioritized, we assign ownership on the basis of seniority or the basis of expertise in a particular field. Then we assign the ownership and wait for the owner to confirm or approve their ownership from their end.

I have also created some data quality rules on Collibra Platform to monitor the accuracy, timeliness, and completeness of the data. Apart from that, I have also tried to create some workflows and some policy measures, tried to create some data products, and data contracts as well.

Collibra Platform has been used by my organization for various clients for internal company data cataloging. When we have governed the data, when we have cataloged the data, and given it a business glossary name, after that, we have been able to build many use cases on AI, and that has been really helpful.

Right now, we are also working with an AI use case or making an AI chatbot to answer quickly and to have the metrics quickly. To build that, we need to catalog some amount of data related to around 45 to 46 reports. First of all, we don't have to do it manually. We can enter the data element in Collibra Platform, and then we can define the data type or the data definitions..”

“Getting started with Collibra Platform was quite tough initially, as it involved change management to lift and shift to new technology. We set up as per governance policy, starting small, onboarding business data users for reporting governance, documenting reports, KPIs, and dimensions, leveraging workflows to collaborate efficiently. We identified data owners from each business domain and began with critical data elements, around one hundred to three hundred elements and their associated KPIs. Regular biweekly touchpoints helped to understand their journey, the value gained, and areas for improvement. Over roughly two years, we saw significant adoption growth from a few hundred to over a thousand users, and this journey continues..”

“I would advise others that it's really easy to use. You can have a small training provided by Collibra Platform and you are good to go. Your basic use cases are covered. Your team can use it in a very efficient way and you can have visibility of all the datasets and all the data catalogs available in your database. Collibra Platform has been a great help for any development which we are looking to do and in tracing the lineage and detecting if any datasets is broken or giving any null values or anything. It has been very important to use it. I would advise to go ahead and use it. It will not take much time. If you don't even know how to use it, you will learn it really quickly. It's a good to go product. I give this product a rating of eight out of ten..”
