Product Recap

DXC Cloud Services

DXC Cloud Services Recap

DXC Cloud Services offers comprehensive cloud solutions that cater to enterprise-grade needs, providing businesses the agility and scalability essential for optimizing operations efficiently in the digital era.

DXC Cloud Services empowers organizations with its tailored cloud solutions, designed to meet critical operational challenges. Its robust infrastructure ensures seamless integration with existing systems, while its dynamic architecture provides the flexibility required for rapid adaptation to business demands. DXC supports hybrid and multi-cloud environments, ensuring smooth transitions and effective management across different cloud platforms.

What are the key features of DXC Cloud Services?

- **Hybrid Cloud Management:** Integrates on-premise and cloud resources seamlessly
- **Analytics and Insights:** Provides advanced analytics for informed decision-making
- **Security and Compliance:** Offers comprehensive security features to protect data
- **Automation:** Enhances operational efficiency with automated processes

What benefits should you look for in reviews of DXC Cloud Services?

- **Operational Efficiency:** Increases productivity with streamlined processes
- **Scalability:** Supports business growth with flexible cloud solutions
- **Cost Management:** Optimizes expenditure for cloud resources
- **Improved Decision Making:** Through real-time analytics and data insights

DXC Cloud Services are designed for diverse industry applications, from financial services enhancing data security and ensuring regulatory compliance to retail optimizing supply chain operations and customer engagement through cloud-based insights. Its adaptable architecture allows sectors like healthcare to improve patient outcomes with efficient data management.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

“I have seen a return on investment with DXC Cloud Services, especially in terms of time saved and improved efficiency.”

Nishant Chauhan

Senior Data Engineer at LTM

“DXC Cloud Services has positively impacted my organization by allowing us to monitor a 5 to 10 percent reduction in cloud spending.”

Verified user

Senior Client Leader at a tech vendor with 10,001+ employees

“The commercial aspect of DXC Cloud Services provides a commercially attractive solution through outcome-based solutions where I orient the solution to the customer on the basis of their business KPIs and make that outcome-based.”

Verified user

Vice President, Europe at a outsourcing company with 1,001-5,000 employees

- ✓ “The best features that DXC Cloud Services offers are probably security and reliability.”

Verified user

Founder / CEO at a consultancy with 11-50 employees

- ✓ “DXC Cloud Services offers reliability and extensive operational support, which are the best features in my experience.”

Jitendra Saroj

Senior Consultant at a tech services company with 501-1,000 employees

What users had to say about valuable features:

“The best features that DXC Cloud Services offers are probably security and reliability. Coming from a legacy environment, the security aspect of legacy applications has traditionally been weak. DXC Cloud Services tends to offer really strong controls and a reliable and resilient infrastructure.

DXC Cloud Services also offers enterprise experience support for enterprises, which is definitely an added benefit. Integration wise, it is API enabled, but there has been a fair bit of integration challenges, particularly because of integration with legacy systems.

DXC Cloud Services has been used to generate documents and help with quality engineering. The AWS native AI features that are offered have been used, and the outputs have been quite professional..”

“DXC Cloud Services offers reliability and extensive operational support, which are the best features in my experience.

“What stands out to me about DXC Cloud Services is the security and the scalability. DXC Cloud Services scales effectively to support changing business and workload demands and offers the flexibility needed for our growth and demand fluctuations.

“Their reliability in infrastructure management and the strong operational support make the security capabilities of DXC Cloud Services suitable for enterprise work.

“DXC Cloud Services has positively impacted my organization by improving system stability, reducing the effort required to manage the cloud environment, enabling faster deployment, and allowing better resource utilization across projects..”

Jitendra Saroj

Senior Consultant at a tech services company with 501-1,000 employees

[Read full review](#) 

“The best features DXC Cloud Services offers in my experience definitely include the multi-cloud capability, and the orchestration of cloud services is simple. I found that the integrated ops were particularly good, and when I called, people were able to pick up promptly.

“The orchestration stood out for me because it manages various aspects of the task at the central level and orchestrates the various tasks.

“DXC Cloud Services has positively impacted my organization by allowing us to monitor a 5 to 10 percent reduction in cloud spending. With AWS and Azure, the cost aspect also helped in understanding where and what I can use. I tracked that 5 to 10 percent reduction through reports that the CFO's office had set up with those parameters..”

Verified user

Senior Client Leader at a tech vendor with 10,001+ employees

[Read full review](#) 

“In terms of the features that actually stand out in DXC Cloud Services, the first one is the CSO, which means cloud service orchestration.

“Another feature that I would like to mention is FinOps and cost governance baked in, which helps avoid bill shock.

“The positive impacts that we see by using DXC Cloud Services include speed as the first one.

“After using DXC Cloud Services, built-in SOC, built-in ISO under a different model such as 27017, zero-trust, and unified governance across multi-cloud make audits easier.

“In terms of governance and security of DXC Cloud Services, they wrap AI into their cloud services with a heavy focus on enterprise governance..”

Nishant Chauhan

Senior Data Engineer at LTM

[Read full review](#) 

“The best features DXC Cloud Services offers, based on my experience selling it, are stability, security, and sovereignty.

“The topics of security and sovereignty stand out as top features for DXC Cloud Services because they are at the very top of all decision-makers in the industry at the moment, especially with respect to what is ongoing in the markets and developments in North America. This puts a high emphasis and priority on security, but also sovereignty to ensure that data stays local where it is intended to stay and that no one who should not have access to that data and those solutions has access.

“DXC Cloud Services has positively impacted my organization and my clients' organizations in terms of two important elements: stability and the commercial aspect in terms of providing a commercially attractive solution.

“The commercial aspect of DXC Cloud Services provides a commercially attractive solution through outcome-based solutions where I orient the solution to the customer on the basis of their business KPIs and make that outcome-based. By doing that, I am typically able to provide attractive solutions..”

Other Solutions Considered

“I have been extensively working with AWS and also with Google Cloud Services, which are the two other main partners I previously used before choosing DXC Cloud Services..”

ROI

Real user quotes about their ROI:

“I have seen a return on investment because DXC Cloud Services saves both time and money. That is why we are using it. The time is its main feature, as it is quick and responsive..”

Jitendra Saroj

Senior Consultant at a tech services company with 501-1,000 employees

[Read full review](#) 

“The full return on investment has not yet been seen because a lot of the time has been spent in building the infrastructure, but the applications on the layer on top of it are yet to be fully operational. There is still some time to assess what the return on investment has been. The journey of transition has been quite smooth so far, and it is still too early to tell if a return on investment has been seen..”

Use Case

“DXC Cloud Services hosts our in-house product on their cloud infrastructure. We use our portal to host our internal payment portal on DXC Cloud Services infrastructure. I am new to this, and this is my first project, so I do not have much else to add about my main use case, but I am exploring other products, integrations, or processes we might run through DXC Cloud Services..”

Jitendra Saroj

Senior Consultant at a tech services company with 501-1,000 employees

[Read full review](#) 

“DXC Cloud Services is relied upon for managed AWS environments. One of the projects involved a large scale migration and rebuild of insurance back office applications in a cloud based environment. The applications were hosted on AWS, and AWS was provided by DXC, and the development environment provided by DXC was also used to build the applications. All of the infrastructure on the new platform is hosted in AWS and managed by DXC..”

“The main use cases I see my clients using DXC Cloud Services for are application modernization, re-platforming, and shifting from on-premises solutions into the cloud.

“Regarding application modernization, those are typically applications that have been grown over decades, where customers decide to initiate a modernization. As of today, modernization efforts very often leverage AI tools to support the shift from the old on-premises, private cloud, or other solutions to a modern cloud-based, AI-generated software environment..”

Vice President, Europe at a outsourcing company with 1,001-5,000 employees

“As a point of the enterprise, my main use case for DXC Cloud Services is that we move, build, and run workloads on AWS, Azure, and Google Cloud and private hybrid clouds.

“One of the specific examples of a project where DXC Cloud Services made a difference for my team is the United Airlines legacy app modernization.

“Another example related to BAE Systems comes to my mind, where the problem was that 110,000 employees across defense projects needed secure, scalable IT..”

Nishant Chauhan

Senior Data Engineer at LTM

[Read full review](#) 

“My main use case for DXC Cloud Services is for the CFO to experiment with multi-cloud and integrated FinApps.

“A specific example of how I used DXC Cloud Services for the CFO is a use case from the CFO's office for financial operations, their dashboard, and governance for cost. We wanted to try this with AWS and Azure, which aligned with my experience.

“Regarding my main use case and how it has helped the CFO's office, they are able to see that it can operate across multi-cloud environments. The orchestration was particularly strong, which helped them make decisions about the cost aspect related to cloud spending..”

Other Advice

“If you are looking for a reliable, managed cloud platform, then you are at the right place with DXC Cloud Services. DXC Cloud Services offers a strong combination of operational support, security, and scalability. I would rate this solution an eight out of ten..”

Jitendra Saroj

Senior Consultant at a tech services company with 501-1,000 employees

[Read full review](#) 

“My advice to others looking into using DXC Cloud Services is to consider using the multi-cloud capability and a good orchestration layer to see how they can implement it, along with a good reporting system, which I would recommend. I would rate this product a 7..”

Verified user

Senior Client Leader at a tech vendor with 10,001+ employees

[Read full review](#) 

“I would advise others looking into using DXC Cloud Services to check their background in integration with legacy environments and also their experience in the insurance sector, particularly their experience in large scale deployments across commercial insurance and how long those have been in production.

Improvement is needed in the areas previously mentioned. Although it is early days with DXC and AWS, there is still a journey ahead. Especially in the commercial insurance industry, DXC Cloud Services has not really had very established use cases. There is a lot of learning to be done. The overall review rating for DXC Cloud Services is 6 out of 10..”

Verified user

Founder / CEO at a consultancy with 11-50 employees

[Read full review](#) 

“In terms of accuracy and reliability of DXC Cloud Services for AI capabilities, I want to add that DXC does not train its own LLMs such as GPT-4.

“I advise others looking into DXC Cloud Services to be honest about why they are choosing it versus [AWS](#) or [Azure](#) directly.

“I would rate this product an 8 out of 10..”

Nishant Chauhan

Senior Data Engineer at LTM

[Read full review](#) 

“The security aspect, and that includes AI, is addressed and provided in a fine manner.

“Regarding the accuracy and reliability of output of DXC Cloud Services' AI

capabilities, I would say it is fairly competitive with the other providers in the market. I have not tested it in all areas and may not have a fully comprehensive overview, but it is fine.

“My advice to others looking into using DXC Cloud Services is to focus on the AI capabilities and how to leverage that with new modern platform solutions.

“I gave this review a rating of 9 out of 10..”

About PeerSpot

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
