Product Recap

Protegrity's Data Protection Platform

Protegrity's Data Protection Platform Recap

Protegrity's Data Protection Platform helps organizations protect sensitive data through tokenization, masking, encryption, and centralized access policies across cloud, on-premises, and hybrid environments.

Organizations use Protegrity's Data Protection Platform to limit access to customer, business, and personal data while supporting compliance, secure analytics, testing, and data sharing. A web interface supports data-element creation and policy configuration, while APIs and Protectors extend protection to different applications. Data discovery, classification, access auditing, and detailed logs help teams identify sensitive information and track its use. Reviews also point to areas worth evaluating, including deployment complexity, integration coverage, key management clarity, support for older versions, vulnerability remediation, initialization reliability, alerting, audit reporting, and performance at scale.

What are the key features of Protegrity's Data Protection Platform?

- Tokenization and data masking: Reduce exposure of sensitive values in applications, analytics, and test environments.
- Encryption and database protection: Help secure stored data, including data in SQL Server environments.
- Centralized policies and fine-grained access controls: Apply consistent protection rules across cloud, on-premises, and hybrid systems.
- APIs and Protectors: Integrate protection with applications, including those that cannot use APIs directly.
- Discovery, classification, and auditing: Identify sensitive data and maintain logs of access and activity.

What benefits and ROI should buyers look for in reviews?

- Reduced data exposure: Assess whether masking and tokenization limit access to sensitive values without disrupting approved use.
- More consistent governance: Look for evidence that centralized policies reduce manual work across environments.
- Compliance support: Evaluate how discovery and audit logs help teams document data handling and access.
- Operational efficiency: Check whether integrations and policy management save time after deployment.
- Performance at scale: Review processing speed, reliability, and maintenance effort for large data volumes.

In financial services, teams can tokenize customer and transaction data for analytics and application testing. Healthcare organizations can mask personal information before sharing datasets, while retailers can protect customer records across cloud and on-premises systems. Implementations may combine API integrations, SQL Server protection, and centrally managed policies according to data flows and application requirements.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

- "I can fully recommend Protegrity's Data Protection Platform to others looking for data protection and for streamlining data operations in an organization because this is the most flexible platform for managing data in terms of security and production."

Bethanywalstad Wallister

Java Application Developer at Hexaview Technologies

- "The web interface allows me to create a data element and add that data element to the rule set, and the URL will be created so that the application team can make the API call."

VinishaP

Senior Engineer at a tech vendor with 10,001+ employees

- "Overall, I have had a positive experience with Protegrity's Data Protection Platform, as it provides strong data protection capabilities, supports compliance requirements, and helps organizations securely use sensitive data across business and analytics workloads."

What users had to say about valuable features:

"Protegrity has given us various options. For example, if your system is not compatible to do some actions, it will bend it in such a way. They provide solutions to help the system adapt to the tokenization for sensitive data. They are providing very good protection.."

VinishaP
Senior Engineer at a tech vendor with 10,001+ employees

"The best features are data masking techniques.

"Masking techniques in Protegrity's Data Protection Platform prevent us from unauthorized access of P33 data, P2 data, SSN, and CVV types of data that we usually work with. This is really helpful because it enables us to work with peace of mind that our data is protected, and we end up having more production when we work with data.

"We also have the data discovery and classification features. Protegrity's Data Protection Platform helps us to work on structured and unstructured data in any model before it is fully used.."

Bethanywalstad Wallister
Java Application Developer at Hexaview Technologies

"The best features of Protegrity's Data Protection Platform are its robust tokenization, data masking, and encryption capabilities. I also appreciate the centralized policy management and the ability to protect sensitive data consistently across the cloud, on-premise, and hybrid environments while supporting compliance requirements.

"Protegrity's Data Protection Platform has positively impacted my organization by helping me strengthen data security, reduce the risk of sensitive data exposure, and support compliance requirements.

"Although I don't have specific metrics to share, I have seen improvements in my overall data security posture and compliance readiness. The platform has helped reduce the risk of exposing sensitive data by enabling consistent data masking and tokenization. It has made it easier for teams to securely use protected data for analytics and business operations.."

"I find the features that allow for tokenization in Protegrity's Data Protection Platform very valuable, as they make the tokenization process happen very easily. I create the data elements, and it is very user-friendly.

"The web interface allows me to create a data element and add that data element to the rule set, and the URL will be created so that the application team can make the API call. It is a hassle-free transaction between the Protegrity appliance and the application, which I love. For applications that cannot use API calls, we are using the protectors, which are also very easy to use and user-friendly.

"The ability to implement fine-grained control in Protegrity's Data Protection Platform is good, and it helps with our data protection processes.

"Auditing data access and usage in Protegrity's Data Protection Platform is very important for meeting compliance requirements. It helps us track who can access sensitive data, when it is accessed, and how it is used.

"We maintain an audit server, such as Splunk or other servers, where all the logs have been transferred. Unauthorized access attempts and all logs are captured, which improves accountability and helps us identify security risks.."

Other Solutions Considered

"Protegrity's Data Protection Platform is good, and I have not used any other devices or appliances, but so far, in my experience, it is a good tool and user-friendly.."

VinishaP
Senior Engineer at a tech vendor with 10,001+ employees

ROI

Real user quotes about their ROI:

"When it comes to money, Protegrity's Data Protection Platform has saved us a lot when it comes to data protection. It comes with a clear framework for data protection that prevents us from unnecessary data losses that can cost us more in data recoveries. It also saves us time because it can prevent attacks that could cost us a lot of time in data recovery and the deployment of mechanisms to recover data, allowing our team to use more time when mapping to know where the data may be scaled. The system has saved us time.."

Use Case

"We use the solution to encrypt sensitive data like PII data. Any unauthorized person cannot find the exact sensitive value in case of data issues. We are using that tool to protect sensitive data.."

VinishaP
Senior Engineer at a tech vendor with 10,001+ employees

Read full review

"I usually use Protegrity's Data Protection Platform to secure our data to ensure that when we are testing or working on any project, our data is secure. It masks our data from any malware attacks or any cyber criminal attacks.

"When I'm working on a project, I appreciate that we can customize the data with Protegrity's Data Protection Platform. It prevents any leakages or protects the confidential data that we are working with from any unauthorized access.."

"My customers are using Protegrity's Data Protection Platform.

"We are using the database protectors for one of our SQL servers and another one for other applications where we are making API calls.

"We are not using Protegrity's Data Protection Platform's encryption feature; we are using only tokenization.."

VinishaP
Senior Engineer at a tech vendor with 10,001+ employees

Read full review

"I use Protegrity's Data Protection Platform to protect sensitive customer and business data through data masking, tokenization, and encryption while supporting regulatory compliance with secure data sharing across cloud and on-premises environments.

"I primarily use Protegrity's Data Protection Platform for data masking and tokenization for sensitive information, such as customer and business data. This helps me to protect confidential data, support compliance requirements, and securely share data for analytics while minimizing the exposure to unauthorized users.

"In addition to data masking and tokenization, I use the platform to help maintain compliance requirements and securely enable data access for analytics and business operations while reducing the risk of sensitive data exposure.."

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

"The initial setup of Protegrity's Data Protection Platform is very easy; they provided us with a guidebook and a runbook that explained each step clearly, making installation very easy.."

VinishaP

Senior Engineer at a tech vendor with 10,001+ employees

Read full review

"The initial setup is easy. We have various applications, and establishing the connection between the Protegrity and the application was quite difficult.

The deployment can be done in one week if everything is ready, including network, application, and OS compatibility.

Protegrity provided the user manual. We followed the steps that they gave. We use the Linux platform. Everything was documented, and with the help of their solution architect, we did the procedures, and it was very easy. ."

"The initial setup of Protegrity Data Security was straightforward. However, we had a few problems, it's not multi-tenanted. It does not have a hierarchy of roles and differential priorities.

To have the initial sandbox version of Protegrity Data Security up and running, took approximately one week. However, it needed to be set up in a resilient way because if it fails, then it is going to be a challenge bringing back the lost information. We have to be particular in terms of architecting it correctly which is taking us a bit of time. We are anticipating anywhere between four to six weeks to be finished.."

Customer Service and Support

"I would rate the technical support by Protegrity a ten because they are very proactive. We have a monthly call with them, and even if I send an email without creating a support case, they respond to me. They will also create a support ticket, and if I raise a support ticket, they act quickly based on the priority.."

VinishaP
Senior Engineer at a tech vendor with 10,001+ employees

"The customer support for Protegrity's Data Protection Platform has been very reliable. They foresee the success of their product in our organization by deploying it and making follow-ups. They keep monitoring performance, and when we raise an issue, they respond very quickly. They are usually available 24/7. I can chat with them anytime, and they receive our calls very fast.."

Other Advice

"My clients purchased Protegrity's Data Protection Platform directly from the vendor.

"I would rate Protegrity's Data Protection Platform an 8.5 overall.."

VinishaP
Senior Engineer at a tech vendor with 10,001+ employees

Read full review

"For people who are operating only on structured information, Protegrity Data Security would work very well. If they have information that is unstructured, semi-structured, such as video images, then this solution is not the tool for them.

I rate Protegrity Data Security an eight out of ten.."

Vinoth Raj Prabhakaran
Senior Data Architect at Tata Consultancy Services

"The AI governance and security capabilities are aligned with enterprise requirements, providing policy-based control, data protection, and compliance support for AI, analytics, and workloads.

"Overall, I have had a positive experience with Protegrity's Data Protection Platform. It provides strong data protection capabilities, supports compliance requirements, and helps organizations securely use sensitive data across business and analytics workloads.

"Protegrity's Data Protection Platform is a strong and reliable protection platform that helps secure sensitive data and support compliance. With some improvements in usability and reporting, it would be even better. I give this product a rating of eight out of ten.."

"Protegrity is an easy-access tool, and its team will help you from the beginning of the architecture. They will tell you about the bugs or errors from the application point of view that can be rectified from your end. The Protegrity team will give all this information. Until the completion of implementation, they will stay with you, and post-implementation also, they will help you.

I will give the topmost rating because of the easy UI, supporting and troubleshooting document, and the upgrade guide. Everything is perfect. Whatever the changes they are making in their environment, they are updating us over email. If you forget to let them know that your issue is not resolved. They will send you continuous emails even after 10 or 20 days. They keep on following up on your issue in a very decent manner. Their support is also perfect, even on Saturday and Sunday. They do not hesitate to help you. They will Understand your issue and its severity and help you.

Overall, I rate the solution a ten out of ten.."

"The performance of Protegrity's Data Protection Platform has been flexible, and I have no other additional feedback. We are beneficiaries because we have benefited from the data protection integrity, and I can say that we are still working to see if we can get some improvements later, but for now, the performance has been excellent.

"I can fully recommend Protegrity's Data Protection Platform to others looking for data protection and for streamlining data operations in an organization because this is the most flexible platform for managing data in terms of security and production.

"I can see that Protegrity's Data Protection Platform is very reliable when it comes to protecting data in an organization. It makes the entire data ecosystem secure, and it is very good for enterprise growth. I can really recommend it.

"I gave this review a rating of 8 out of 10.."

About PeerSpot

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
