Product Recap

Aikido Security

Aikido Security Recap

Aikido Security is the no-nonsense platform that empowers developers by centralizing code-to-cloud security issues and providing rapid guidance for fixing vulnerabilities.

With over 6,000 teams utilizing its features, Aikido Security prioritizes effective security management by consolidating 11 comprehensive scans into one platform. This approach translates complex vulnerabilities into understandable insights, targeting non-enterprise SaaS businesses with engineering teams of 10-500 developers. It focuses on delivering security management without excessive costs or complexity through a product-led growth model.

What are the standout features of Aikido Security?

- SAST: Secures code as it is written.
- DAST: Monitors surfaces, dynamically tests for vulnerabilities with OWASP ZAP.
- IaC: Detects infrastructure vulnerabilities.
- CSPM: Real-time detection of cloud infrastructure risks.
- Container Scanning: Assesses container environments for risky packages.
- Secrets Detection: Identifies exposed API keys, passwords.
- Open Source Dependencies: Analyzes dependencies to avoid vulnerabilities.
- Open Source License: Maps and exports SBOMs to manage license risks.
- Malware Detection: Protects from supply chain attacks.
- Runtime Protection: Secures apps with an embedded firewall.
- Custom Scans: Integrates with existing tools like SonarQube.

Why should you consider Aikido Security?

- Easy Adoption: Setup takes less than 3 minutes with clear UX.
- Cost Efficiency: Offers a comprehensive 9-in-1 solution at competitive pricing.
- Accurate Results: Best false positive reduction in the market.

In industries like software development and cloud services, Aikido Security is implemented to provide clear insights, enabling teams to focus on rapid product growth while maintaining robust security. Its product-led growth strategy, including a freemium offering, allows developers to experience benefits firsthand without initial investment.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

“Aikido Security nests directly in our development workflow and it catches security issues before they reach production.”

Tarunn Goswami

GEN AI Engineer at a educational organization with 51-200 employees

“My advice for others looking into using Aikido Security is that if the codebase and everything need to be audited and recorded in a single forum, and if they want a unified solution to scan both the code and the image, they can definitely use it.”

ParthasarathyT

Senior Infrastructure Engineer at Publicis Sapient

“Aikido Security has positively impacted my organization by allowing us to rely on a single tool for scanning, which saves us money, time, and reduces overhead, making it more cost-optimized for our environment.”

Eucharia Okafor

DevSecOps Engineer at a tech vendor with 1,001-5,000 employees

- ✓ “Aikido Security has positively impacted my organization significantly because initially we were thinking it would take a month for us to achieve SOC 2 compliance again, and with Aikido Security, we were able to get all codebase vulnerability fixes within a week for all our 13 or 14 repositories that we had.”

Samir Patil

Co-Founder & CTO at Mango Giraffe

- ✓ “Aikido Security offers the best features including being very easy to use, allowing even a normal tech person with some hands-on experience to use this tool and clearly get the results they want.”

Verified user

Security Researcher at a tech vendor with 10,001+ employees

- ✓ “We were able to close 90% of issues with the help of Aikido Security tools, providing a return on investment.”

Verified user

Technical leader at a government with 5,001-10,000 employees

“Aikido Security has positively impacted my organization because we feel more secure, we have a good monitoring system for vulnerabilities, and we are able to show our clients our security posture and the security posture of our internal systems.”

Arhernandez Hernandez

Information Security Analyst at FREDERIC SCHAD

What users had to say about valuable features:

“In my opinion, the best feature Aikido Security offers is checking CVEs. Some CVEs are being bypassed by multiple tools, but here, Aikido Security scans it at a granular level, which is a valuable utility it provides.

“Aikido Security has positively impacted my organization by helping to save time in terms of redeployment. Post-deployment, it is very difficult for folks to quickly check each and every test case, but when I use this tool, it helps me remediate all the bottlenecks of security and vulnerabilities over a single UI..”

ParthasarathyT

Senior Infrastructure Engineer at Publicis Sapient

[Read full review](#)

“In my opinion, the best features Aikido Security offers include how easy it is to implement and how fast you can have it running on day one.

“When I say it is easy to implement, basically, I just had to run a template in my AWS account and give it access to GitHub; with those two steps, 80% of the implementation was already done.

“Aikido Security has positively impacted my organization by reducing the time spent chasing vulnerabilities and increasing the visibility of our issues internally, making them easier to track down and pinpoint an origin for them, while also alleviating a lot of pain we had when reaching out to developers about security issues..”

Francisco Pulido

[Read full review](#) 

SecOps Engineer at a real estate/law firm with 501-1,000 employees

“Aikido Security offers the best features including being very easy to use, allowing even a normal tech person with some hands-on experience to use this tool and clearly get the results they want. If we go for DAST also, it is very good.

The ease of use of Aikido Security helps my daily workflow since I can upload my whole codebase, and it will identify at each line where the vulnerabilities are present and provide recommendations to fix and related vulnerabilities, detailing what those vulnerabilities are and how they will impact the whole code or the infrastructure.

Aikido Security has positively impacted my organization by reducing a lot of work to manually check each line of code; the process goes on and on. Iterations have increased due to manual work, but the iterations which earlier took around seven to eight are now only taking two to three. Using that, a lot of our time gets saved.

For a secure code review or SAST, usually we are taking around seven to ten days, but using Aikido Security, we complete the activity within two to three days..”

Verified user

[Read full review](#) 

Security Researcher at a tech vendor with 10,001+ employees

“One of the best features Aikido Security offers is the ability to scan everything in the same place, allowing us to check for vulnerabilities in our source code.

“Aikido Security scans our source code for security issues, checks open-source libraries for known vulnerabilities, scans Docker images, checks AWS and cloud configurations for misconfigurations, and finds hardcoded passwords or API keys. It combines multiple security tools in one platform, making it unnecessary to have separate tools for each type of scan, which is particularly helpful for developers and DevSecOps engineers.

“Aikido Security has positively impacted my organization by allowing us to rely on a single tool for scanning, which saves us money, time, and reduces overhead, making it more cost-optimized for our environment. We have been able to save at least 60% of our overall costs because we use one tool to capture different vulnerabilities across various areas on a single platform..”

Eucharia Okafor

DevSecOps Engineer at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

“The best features Aikido Security offers include code supply chain scanning, cloud container security to monitor for misconfigurations or runtime threats, automated penetration testing, and the Autofixes feature, which is a new addition in recent versions and helps fix most security issues.

“The feature I find myself relying on the most is code and supply chain scanning, which makes it easier to automate the detection of any security issues, helping to fail the build if there is any malicious code.

“Aikido Security has positively impacted my organization by improving overall code quality, enabling us to develop a secure product, and drastically improving our reputation among customers. We now have all types of reports and dashboards, allowing any stakeholder or management to easily check how much work has been done and the product's security status.

“The biggest outcome I have seen from using Aikido Security is improved code quality..”

Verified user

[Read full review](#) 

Technical leader at a government with 5,001-10,000 employees

“The best features Aikido Security offers are the ability to generate reports aligned with security frameworks and how well we accomplish alignment with those security frameworks.

“The level of detail and the way Aikido Security matches every topic from frameworks make the reporting and alignment with security frameworks stand out. It divides the report topic by topic of the framework.

“I can assign to my developers the things I want them to change, which is an important feature of Aikido Security.

“Aikido Security has positively impacted my organization because we feel more secure. We have a good monitoring system for vulnerabilities through Aikido Security, and we are able to show our clients our security posture and the security posture of our internal systems.

“Since using Aikido Security, it has become easier for us to show evidence about compliance. For example, when auditors want to check those kinds of things, we are able to show them how we are in compliance with ISO 27001 and in compliance with development best practices.

“Aikido Security's governance and security capabilities are great. It is quicker to access the features and easiest to get accurate information regarding vulnerabilities and changes we need.

“The accuracy and reliability of output from Aikido Security are excellent. It is very accurate, and we always have the latest information from the topics we are working on..”

Arhernandez Hernandez

Information Security Analyst at FREDERIC SCHAD

[Read full review](#) 

Other Solutions Considered

“Aikido Security is the first solution for the company regarding development vulnerabilities. Before choosing Aikido Security, I did evaluate other options, but I do not remember the other ones because it was three years ago..”

Arhernandez Hernandez

Information Security Analyst at FREDERIC SCHAD

[Read full review](#) 

“We explored other options like Checkmarx for static application security testing and Prisma Cloud for container and cloud security, but they were either too expensive or too complex to set up and manage with more engineers. Aikido Security was easier to implement, more affordable, and covered all the key scanning capabilities we needed..”

Eucharía Okafor

DevSecOps Engineer at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

“Before choosing Aikido Security, I evaluated other options such as TruffleHog, which is also free, and I also assessed Snyk, Checkmarx, Black Duck, and Veracode..”

Verified user

[Read full review](#) 

Technical leader at a government with 5,001-10,000 employees

“Before Aikido Security, we used SonarQube and Trivy scanning. However, we realized that those solutions incurred more resource costs, took more time to scan, and functioned within our day-to-day CI/CD flows less efficiently. Switching to Aikido Security helped us achieve a single straightforward approach, reducing the scanning time..”

ParthasarathyT

[Read full review](#) 

Senior Infrastructure Engineer at Publicis Sapient

“Before choosing Aikido Security, I evaluated other options such as Checkmarx, Semgrep, and SonarLint. These are in the market, but Aikido definitely performs better than all of them, and its customer support is very good. That's why I chose Aikido Security. I compared online reviews, and Aikido seems to be very promising in that nature, so I chose Aikido Security from my point of view..”

Verified user

[Read full review](#) 

Security Researcher at a tech vendor with 10,001+ employees

“Before using Aikido Security, we had a combination of separate tools like Sneak for open-source dependency scanning, SonarQube for static security analysis, and Trivy for container scanning. Managing these three platforms with different dashboards, alerts, and CI/CD integrations was time-consuming and often led to issues falling through the cracks, which is why we switched to Aikido Security for its consolidated capabilities..”

Eucharia Okafor

DevSecOps Engineer at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

ROI

Real user quotes about their ROI:

“I have seen a return on investment; I already shared earlier that our biggest ROI is the time needed in chasing vulnerabilities, which has been reduced by roughly 70%..”

Francisco Pulido

SecOps Engineer at a real estate/law firm with 501-1,000 employees

[Read full review](#) 

“Aikido Security is an investment that saved my time by automating security checks and helping identify issues early before they become costly problems..”

Abdulmunafz Mct

Full Stack Developer at Sri Krishna Arts and Science

[Read full review](#) 

“I can tell that I have seen a return on investment from the QA end, where they save time monitoring and checking the vulnerabilities at the code level, which also helps them to follow everything in line with our organization restrictions..”

ParthasarathyT

Senior Infrastructure Engineer at Publicis Sapient

[Read full review](#) 

“There is absolutely a return on investment with Aikido Security; After implementation, we saw a 35% reduction in vulnerabilities reaching production, and our security review time per deployment dropped significantly as issues were caught much earlier in the development process..”

Eucharía Okafor

DevSecOps Engineer at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

“You can say we have seen a return on investment in time saved. Regarding pricing, I don't know how much ROI we have saved, but you can say the task, which usually took around seven to eight days, now takes two to three days, hardly three days. Within that, we just complete the task using Aikido Security, so we save around three to four days..”

Verified user

Security Researcher at a tech vendor with 10,001+ employees

[Read full review](#) 

“The return on investment with Aikido Security was very clear and measurable across multiple dimensions. First and most significant is the cost of prevented breaches. Aikido Security caught a critical remote code execution vulnerability in my Python machine learning pipelines before it reached production. Industry estimates put the average cost of a data breach for a small to mid-sized company at anywhere between one hundred thousand to five hundred thousand dollars. When you factor in incident response, legal costs, customer notification, and reputation damage, preventing even one such incident more than justified my entire annual subscription many times over. The second one is developer time savings. Before Aikido Security, my senior developers spent roughly six to eight hours per week manually reviewing code for security issues and triaging vulnerability alerts from multiple tools. After Aikido Security, that dropped to approximately one to two hours per week, a saving of nearly seventy-five percent of security review time. Across a team of five developers, over a year, that translated to hundreds of recovered engineering hours redirected towards actual product development. The third one is tool consolidation savings. I replaced Snyk and a separate secret scanning tool with Aikido Security alone. That consolidation saved approximately four hundred to five hundred dollars monthly in subscription costs while actually improving our security coverage..”

Tarunn Goswami

GEN AI Engineer at a educational organization with 51-200 employees

[Read full review](#) 

Use Case

“My main use case for Aikido Security is vulnerability scanning of our internal applications. We have a development department, and we scan those applications for vulnerabilities and other security issues.

“In addition to my main use case, we have samples where clients want to see security information reports from our internally developed systems. We generate those reports with Aikido Security, and then we are able to show them how we are aligned with best practices and frameworks such as ISO 27001..”

Arhernandez Hernandez

Information Security Analyst at FREDERIC SCHAD

[Read full review](#) 

“My main use case for Aikido Security is a centralized place where I can manage all of my security posture across my company.

“For that main use case, I use mainly Aikido Security to check that my cloud accounts are safe, that there are no critical vulnerabilities around, and that all of the best practices are applied across the board.

“Regarding my main use case for Aikido Security, it helps me a lot in my day-to-day life because it has automated built-in reports for Jira and Slack, so having this kind of information instantly alleviates a lot of pressure..”

Francisco Pulido

SecOps Engineer at a real estate/law firm with 501-1,000 employees

[Read full review](#) 

“My main use case for Aikido Security is to scan our code base for vulnerabilities, threats, CVEs, code practices, approved patterns, and general code scanning from the developer end. Aikido Security helps to check both the code and is integrated with our CI tool.

“A quick specific example of how I have used Aikido Security in my work is when it helped me catch credentials that people may have directly hardcoded in the code. Using Aikido Security, I am able to get that removed and sorted out.

“Aikido Security handles bypasses or advanced threats by providing a unified environment for both code and Trivy scanning. In general, when we want to use any tool for our CI codebase, we need to have separate tools for coding and one for the container. Aikido Security unifies this by allowing code and image or container registries, so we can have it all in one..”

ParthasarathyT

Senior Infrastructure Engineer at Publicis Sapient

[Read full review](#) 

“My main use case for Aikido Security is to perform SAST, security code review of codes provided by developers, and SCA determination or dependency checks.

I used Aikido Security during an engagement where I performed SAST on a code to review what flags or vulnerabilities are part of the codebase. I identified many critical and high-level vulnerabilities, which helped to further mitigate those so that in production, there are no such issues.

Additionally, I perform SCA determination with Aikido Security to check that dependencies are not vulnerable in nature, ensuring all are safe and no vulnerabilities are present in the dependencies..”

Verified user

Security Researcher at a tech vendor with 10,001+ employees

[Read full review](#) 

“My main use case for Aikido Security is to consolidate all our application security scanning into one platform, primarily to manage multiple tools more efficiently. I use it to scan our code for vulnerabilities with SAST, check for open-source dependencies with SCA, scan our Docker images, detect hardcoded secrets, or API keys in our database, and integrate it directly into our CI/CD pipeline so that every code commit is automatically scanned before reaching production.

“During the microservice migration to AWS, Aikido Security flagged critical vulnerabilities and detected hardcoded API keys, allowing us to fix both issues before they reached production..”

Eucharía Okafor

DevSecOps Engineer at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

“My main use case for Aikido Security is detecting security issues and triaging, and if there is any security risk, we detect and fix those security fixes.

“I use Aikido Security for detecting and fixing security risks by implementing a DevOps pipeline using a static application security testing tool, which helps automate the detection of exposed secrets and checks for any malicious open-source packages, making it easier for developers to prepare a list of issues they need to fix. Our goal is to ensure all repositories are free from any security issues, monitor cloud configurations that are not done correctly, scan images for runtime threats, and perform automated penetration testing to simulate real-world attacks, detecting any loopholes. It also helps improve developers' productivity by filtering out false positives and generating AI fixes with a single click for identified vulnerabilities.

“The main use case for Aikido Security is to perform static application security testing whenever a developer checks in code to ensure there is no malicious code checked in..”

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“My experience with Aikido Security's pricing, setup cost, and licensing is that pricing is very straightforward, its information is publicly available on the website, setup cost was none basically, and the licensing is included within the price..”

Francisco Pulido

[Read full review](#) 

SecOps Engineer at a real estate/law firm with 501-1,000 employees

“My experience with the pricing, setup cost, and licensing was very easy, as all information is already public. They have their pricing tiers publicly available to everyone. We also had help from our customer success manager who was with us the whole way..”

Francisco Pulido

[Read full review](#) 

SecOps Engineer at a real estate/law firm with 501-1,000 employees

“I purchased directly through Aikido Security's website. The signup and onboarding process was very straightforward. Connecting my GitHub organization, I was scanning within minutes, with no complex procurement process needed. Aikido Security's pricing setup follows a repository-based pricing model. The cost scales with the number of repositories being scanned. For small teams, the entire price is very reasonable. The setup cost was essentially zero, with no professional services or implementation fees. The self-service onboarding took less than thirty minutes to connect all repositories and configure scan rules. Licensing is a straightforward annual or monthly subscription, with no per-user fees, which is developer-friendly. Overall, it is one of the most transparent and accessible pricing models I have seen in the security tools space..”

Tarunn Goswami

[Read full review](#) 

GEN AI Engineer at a educational organization with 51-200 employees

Customer Service and Support

“My experience with customer support has been good. We had some issues, and they responded very quickly. Their solutions and suggestions have been acceptable based on standard practices..”

ParthasarathyT

Senior Infrastructure Engineer at Publicis Sapient

[Read full review](#) 

“Customer support is good; if you raise a query, hardly within a day, your issues get resolved, and designated teams contact you instantly, with tickets getting created and all the tracking happening very smoothly..”

Verified user

Security Researcher at a tech vendor with 10,001+ employees

[Read full review](#) 

“The customer support experience has been very positive; they are responsive, knowledgeable about their product, and provide clear guidance on configuration and integrations. They also offer a solid documentation library for common questions, though 24/7 support for enterprise customers would be an improvement..”

Eucharía Okafor

DevSecOps Engineer at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

“The customer support for Aikido Security is unbeatable; they are really easy to talk to, very friendly, and their response time is ridiculously low.

“I would rate the customer support a 10 out of 10..”

Francisco Pulido

[Read full review](#) 

SecOps Engineer at a real estate/law firm with 501-1,000 employees

“The customer support experience was genuinely positive, especially for a relatively young company. Onboarding support was excellent. Their team proactively reached out after signup to ensure we were set up correctly. Response time for support tickets averaged twelve to twenty-four hours, which is faster than most enterprise security tools. The documentation is clear and well-maintained. Their changelog is also very transparent, with regular product updates and clear explanations. I would rate support an eight out of ten, one of the better support experiences in the developer tools space..”

Tarunn Goswami

[Read full review](#) 

GEN AI Engineer at a educational organization with 51-200 employees

“Customer support for Aikido Security is incredibly efficient. I can get an answer to a question within two or three minutes.

“I chose a rating of ten because after reviewing several other products, Aikido Security was the easiest to use, the easiest to onboard, and the one with the most active customer support. I have a Slack channel with them where I can ask whatever I need and they will respond within minutes, which really helps us..”

Francisco Pulido

SecOps Engineer at a real estate/law firm with 501-1,000 employees

[Read full review](#) 

Other Advice

“Regarding Aikido Security's accuracy and reliability of output, I can say its reliability is 80 to 90%. It definitely works and delivers very good results, easily identifying if you need clarification with the type of vulnerability it has identified and providing a more detailed review of each of them.

If a person is looking for a SAST, DAST, and a complete combination of a pack of security tools, then Aikido Security is best. It helps to perform SAST, DAST, which is dynamic application testing, and most tools don't combine all of them in one. You can also scan your cloud and your infrastructure as code things, covering all the wide areas of your project, so that type of person can definitely choose Aikido Security.

I would rate my overall experience with Aikido Security as an 8 out of 10..”

Verified user

Security Researcher at a tech vendor with 10,001+ employees

[Read full review](#) 

“My advice for anyone considering Aikido Security is to proceed and try it as the onboarding process is straightforward and can be completed within a day. Start by connecting critical repositories and integrating with CI/CD pipelines from day one for automatic scanning, and prioritize alerts systematically to avoid feeling overwhelmed.

“My overall impression of Aikido Security is very positive; it simplifies the life of a [DevSecOps](#) engineer by consolidating tools into one platform, making application security accessible and manageable without a large dedicated team. I would recommend Aikido Security for any organization serious about shifting security left and embedding it into their development lifecycle. I give this product a rating of 8..”

Eucharia Okafor

DevSecOps Engineer at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

“My advice for others looking into using Aikido Security is to take into account that they will get a robust solution with AI capabilities and a perspective aligned with a security framework, which is very important.

“A specific example of how I use Aikido Security in my workflow is that when we have a new build for an application developed internally, we scan that build and then proceed to see what happens and what the Aikido Security results from the scan are. I then communicate to the development team the things they have to update, create, or change to be able to mitigate those breaches.

“I would rate this solution a ten out of ten..”

Arhernandez Hernandez

Information Security Analyst at FREDERIC SCHAD

[Read full review](#) 

“We were able to close 90% of issues with the help of Aikido Security tools, providing a return on investment.

“I would advise others looking into using Aikido Security to evaluate several options based on their specific requirements for [SAST](#), DAST, and [SCA](#), including how much they want to automate and their budget for security tools. While there are better options available, some might be expensive, and there are free options that don't provide the same features as Aikido Security.

“I would rate this review an eight overall..”

Verified user

Technical leader at a government with 5,001-10,000 employees

[Read full review](#) 

“I find myself checking Aikido Security for these issues daily.

“I use Aikido Security daily since I received daily reports of usage and compliance across the board, which means I need to check it daily and even several times a day.

“I think Aikido Security's AI capabilities are scoped correctly; it only affects a few parts of the applications, so not everything is governed by AI, just a few features.

“Regarding Aikido Security's AI accuracy and reliability of output, I think its AI capabilities are all right, but it can miss the point sometimes; it is good to have a fast and cheap overview, but I would not rely 100% on it.

“My advice to others looking into using Aikido Security is to get it as soon as possible; right now, it is a very good tool for a very good price, and you will see a return on investment in less than six months. I have given Aikido Security an overall rating of 10 out of 10..”

Francisco Pulido

SecOps Engineer at a real estate/law firm with 501-1,000 employees

[Read full review](#) 

“I would add that Aikido Security will be integrated into a platform where we can check both the coding and image scan, which is very beneficial.

“I would add that the integration done with other tools such as [Git](#) and CI/CD [Jenkins](#) pipeline is seamless.

“I can share that we can deploy an additional two more deployments with Aikido Security. Usually, it takes four deployments per day, but now we can have two more, which makes it six deployments per day, allowing QA to navigate the security threats easily within the window.

“Regarding Aikido Security's AI capabilities, I think its governance and security are quite secure. We get to use our cloud-native tool, which is seamless. Aikido Security's database is well managed by us rather than relying on SaaS.

“Regarding Aikido Security's AI capabilities, I find it very reliable. Aikido Security's output is as expected.

“My advice for others looking into using Aikido Security is that if the codebase and everything need to be audited and recorded in a single forum, and if they want a unified solution to scan both the code and the image, they can definitely use it. I would rate my overall experience with Aikido Security a ten out of ten..”

About PeerSpot

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
