Product Recap

Barracuda SecureEdge

Barracuda SecureEdge Recap

Barracuda SecureEdge is a comprehensive security platform designed to provide robust protection, streamline operations, and ensure compliance. It caters to businesses looking for secure and efficient network solutions.

Barracuda SecureEdge offers a range of tools to enhance security across your infrastructure. It integrates seamlessly with existing networks, managing risks through advanced threat intelligence. Known for its user-friendly experience, it aids businesses in maintaining security standards while optimizing network performance.

What are the essential features of Barracuda SecureEdge?

- **Advanced Threat Protection:** Utilizes real-time threat intelligence to protect against emerging threats.
- **Comprehensive Network Security:** Provides state-of-the-art firewall and VPN services to secure network traffic.
- **Cloud Integration:** Offers seamless integration with leading cloud platforms for enhanced scalability.
- **User Access Management:** Ensures secure user access with identity-based policies.

What benefits should users seek in Barracuda SecureEdge reviews?

- **Improved Security Posture:** Enhanced protection across network endpoints.
- **Cost Efficiency:** Reduction in operational costs with streamlined management.
- **Scalability:** Easily adapt to growing network demands.
- **Ease of Deployment:** Quick and simple implementation process.

In industries like finance and healthcare, Barracuda SecureEdge can be instrumental in meeting compliance standards while ensuring data integrity. Its deployment strategy aligns well with the requirements of sectors needing high security and regulatory adherence. Efficient threat detection and mitigation capabilities are crucial for these sensitive fields.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

“Most of us will have multiple complaints, but in this instance, Barracuda SecureEdge is a very solid tool that keeps abreast of cyber threats and is constantly improving their applications.”

Esther Sultaana

Storage Consultant Storage at Hewlett Packard Enterprise

“My advice to others looking into using Barracuda SecureEdge is that if the product meets your requirements and provides a unified platform to manage networking as well as security, then Barracuda SecureEdge is one of the best options in terms of pricing and administrative management of this product.”

Verified user

OT Cybersecurity Analyst at a government with 10,001+ employees

“Overall, it has improved productivity for both our IT team and end-users while strengthening our organization's security and network management capabilities.”

karan rathod

network security engineer at a outsourcing company with 11-50 employees

- ✓ “Barracuda SecureEdge has provided a good balance of security, connectivity and ease of management.”

Sandip Ade

Network engineer at a outsourcing company with 11-50 employees

- ✓ “I have seen specific outcomes since using Barracuda SecureEdge, such as tool consolidation that combines multiple tools like VPN, firewall, secure web gateway, and SD-WAN into one solution, resulting in around a twenty to thirty percent reduction in security tool costs, improved operational efficiency, and increased efficiency around twenty-five to forty percent.”

Samir Paul

Security Practitioner at a tech vendor with 10,001+ employees

- ✓ “Overall, it has strengthened our security posture and improved the business's operational efficiency significantly.”

Sufiyan Shaikh

Senior Technical Support Executive at digital track

- ✓ “Barracuda SecureEdge has positively impacted our organization by making it easy for end users, as they do not have to enter their credentials manually to connect to the traditional VPN, which previously required Cisco AnyConnect.”

Neil Naguna

Infrastructure & Support Senior Specialist at a retailer with 51-200 employees

What users had to say about valuable features:

“The standout features of Barracuda SecureEdge are secure remote access, centralized management, and consistent security policy enforcement. Barracuda SecureEdge provides excellent visibility into user activity and network traffic, making administration straightforward. We also value it for ease of deployment and cloud-based management capabilities. The features help improve security, simplify operations, and support a seamless user experience.

“Barracuda SecureEdge has demonstrated strong accuracy and reliability in security monitoring, policy enforcement, and secure capabilities. Barracuda SecureEdge consistently delivers the visibility and control needed to manage security. Overall, we have found it to be a reliable and trustworthy solution for our environment. Its dependable performance helps ensure a smooth user experience while maintaining security standards..”

Sufiyan Shaikh

Senior Technical Support Executive at digital track

[Read full review](#) 

“The best feature in Barracuda SecureEdge is that access for end users is limited by their roles, allowing us to specifically provide access to what they need for their day-to-day work.

Being able to limit access by role with Barracuda SecureEdge has made it easier and safer for my organization since we have different departments, which allows us to limit their access accordingly. End users are unable to access other resources that are explicit, and only higher limit access roles can be provided to end users that have higher roles.

Barracuda SecureEdge has positively impacted our organization by making it easy for end users, as they do not have to enter their credentials manually to connect to the traditional VPN, which previously required Cisco AnyConnect. Since switching to Barracuda SecureEdge, I have noticed specific outcomes, including a huge difference with fewer alerts regarding unauthorized access on the servers..”

Neil Naguna

Infrastructure & Support Senior Specialist at a retailer with 51-200 employees

[Read full review](#) 

“The best features Barracuda SecureEdge offers include the Zero-Trust network that is designed to give communication by aligning with the zero-trust strategic mindset. The second thing is that it offers network segmentation, IPS detections, and virus and anti-malware signature protections. It also helps you to protect against malicious content and phishing threats. These are the main features of Barracuda SecureEdge that help us with the day-to-day operations, and we are very confident that the single unified appliance is giving you the networking as well as the security features in a single platform.

“It provides a SASE platform, making the cost-benefit one of the most important benefits we get. Time-saving is one of the factors, and the most important thing is that the administrative side is very familiar and easy to manage. There is no complexity in managing this product as it is very straightforward. Additionally, emerging threats are evolving day by day, and Barracuda has good, advanced potential threat engines, which give leverage to customers against any potential threats..”

Verified user

OT Cybersecurity Analyst at a government with 10,001+ employees

[Read full review](#) 

“What I appreciate about Barracuda SecureEdge is the next-generation firewall capability. When I compare it to Azure firewall, Barracuda SecureEdge does not convert the source IPs, so I can determine what the source of each request is. Azure firewall cannot provide this information, and I cannot find out where a request is coming from. The extra features of Barracuda SecureEdge stand out because of this.

“When you test something, you can easily find out where a connection does not work. When it is a routing issue, you see not only that it is not working, but you can also see that the rule is successfully going through while the answer is not coming back. You can see the response, and if the response is not coming, then you have to wait until timeout occurs, and then you receive a timeout connection error, but the rule was successful.

“The networking around it makes it easier to find out where the issue is..”

Gerald Zelger

Information Technology Technical Consultant at SoftwareONE

[Read full review](#) 

“Barracuda SecureEdge offers centralized cloud management, Zero Trust Network Access and secure SD-WAN as its best features. Together they make it easy to manage security policies, securely connect remote users and maintain reliable connectivity across multiple locations from a single platform.

Centralized cloud management has had the biggest impact for me. It simplified policy management, reduced the time spent on administration and gave us better visibility across all locations. As a result, our team can respond to issues faster and manage the environment more efficiently.

Barracuda SecureEdge has provided a good balance of security, connectivity and ease of management. The platform is very easy to use, and the centralized management capabilities have helped simplify our day-to-day operations. We especially appreciate having networking and security features integrated into a single solution which reduces complexity and improves visibility across the environment.

Baracuda SecureEdge has positively impacted my organization by improving operational efficiency. It has simplified network management, reduced administrative effort, enhanced visibility and helped us maintain consistent security across our environment..”

Sandip Ade

Network engineer at a outsourcing company with 11-50 employees

[Read full review](#) 

“The best features Barracuda SecureEdge offers in my experience include application control, which you can use for thousands of cloud and local applications; for example, it prioritizes Zoom or it can block high bandwidth entertainment. Zero trust verification is also vital, as in this age of cyber attacks and cybersecurity, you can check for user identity and device health, which is something you really want within the cloud realm in particular, as well as sandboxing. With the cloud, if there are any kind of strange files or suspicious links, which are frequent unfortunately, it works for that.

“Out of those features, I would say that application control has had the biggest impact for me, especially when you are working with Microsoft 365, as you do want to have that control when you may have thousands of users from a global perspective, and then you have a lot of malicious intent, so having that kind of singular control stands out, which I think many administrators or engineers would agree on.

“Barracuda SecureEdge has positively impacted my organization with its granular application control, allowing you to identify users with local apps or cloud from a global perspective, prioritizing a lot of tools or blocking high bandwidth, and zero trust verification lets you check user identity while continuously evaluating risk to block any threats before granting access. I particularly appreciate the sandboxing feature because many people still click on links, and with this feature, you have a secure virtual cloud environment before they can even get to a user, which I think is a really nice feature for Barracuda SecureEdge..”

Esther Sultaana

Storage Consultant Storage at Hewlett Packard Enterprise

Other Solutions Considered

“We did not use another solution before Barracuda SecureEdge. Before that, we depended on traditional next-generation firewalls hosted in our data centers. This is the first cloud security solution we have used..”

Verified user

OT Cybersecurity Analyst at a government with 10,001+ employees

[Read full review](#) 

“We tried Trend Micro before, but Microsoft solutions are not the only products we are using. We have explored other vendor software as well, including Cisco, Oracle, Palo Alto, Sophos, and Fortinet..”

Gerald Zelger

Information Technology Technical Consultant at SoftwareONE

[Read full review](#) 

“Before choosing Barracuda SecureEdge, I wasn't directly involved in evaluating other options, but I know that multiple leading networking and security vendors were considered. The final decision was based on functionality, ease of management and overall fit for our requirements..”

Sandip Ade

Network engineer at a outsourcing company with 11-50 employees

[Read full review](#) 

“I did use other solutions before Barracuda SecureEdge, as when you are working in MSP, you can have a lot of different things within the infrastructure. NordLayer was something that was used, as well as Palo Alto, Fortinet, and Cloudflare, all depending on the customer and environment, because it was an MSP situation. However, Barracuda SecureEdge was brought in specifically for Microsoft 365 cloud and Azure..”

ROI

Real user quotes about their ROI:

“We have seen a return on investment with fewer employees needed, which has really saved our time on troubleshooting many things regarding the VPN and especially on the security side..”

Neil Naguna

Infrastructure & Support Senior Specialist at a retailer with 51-200 employees

[Read full review](#) 

“Our experience with the pricing and licensing has been positive overall. The licensing model is straightforward and easy to understand, and the setup process did not require significant additional cost or complexity. Considering the security features and centralized management capability it provides, we feel it offers good value for the investment..”

karan rathod

network security engineer at a outsourcing company with 11-50 employees

[Read full review](#) 

“We have seen a return on the metrics since implementing Barracuda SecureEdge. It has positively impacted our organization. A lot of time has been saved. Barracuda SecureEdge has reduced the administrative effort, supporting a reliable and seamless user experience. It has enhanced visibility into user activity and helped enforce consistent security policies across different locations. Overall, it has strengthened our security posture and improved the business's operational efficiency significantly..”

Sufiyan Shaikh

Senior Technical Support Executive at digital track

[Read full review](#) 

“I have seen a return on investment from Barracuda SecureEdge, as it is very easy to set up, featuring zero-touch configs for physical branches and built-in multi-link internet optimization, which I think is great. Many admins give it a high rating, and I have not seen anyone rate it as a five, six, or seven—if an administrator or engineer gives an application an eight or more, then it is very good, which it really is. Most of us will have multiple complaints, but in this instance, Barracuda SecureEdge is a very solid tool that keeps abreast of cyber threats and is constantly improving their applications..”

Esther Sultaana

Storage Consultant Storage at Hewlett Packard Enterprise

[Read full review](#) 

“We have seen a positive return on investment, primarily through time saving and reduced operational overhead rather than directly headcount reduction. The centralized management platform has significantly reduced the time spent on routine administration, policy updates and troubleshooting. While I don't have exact financial figures, I estimate that routing network administration and policy management activities require roughly 30 to 40% less effort than before, allowing our team to focus on higher priority projects rather than day-to-day maintenance..”

Sandip Ade

Network engineer at a outsourcing company with 11-50 employees

[Read full review](#) 

“I have seen a return on investment with Barracuda SecureEdge as these are security devices. The ROI can be viewed in how we are protecting our environments from evolving threats. If we protect our environment and feel confident that it is safe, that is the ROI for us. In terms of money savings, if we consider it from a procurement perspective, there is definitely money saving because it is a unified platform. It is not hardware, and we did not receive hardware-intensive equipment. We are not responsible for hardware. This is a cloud-based security solution, so everything is managed by AWS..”

Verified user

OT Cybersecurity Analyst at a government with 10,001+ employees

[Read full review](#) 

Use Case

“My main use case for Barracuda SecureEdge is secure connectivity for branch offices and remote users. We use it to manage network security policies centrally, secure VPN access and ensure consistent protection across multiple locations..”

Sandip Ade

Network engineer at a outsourcing company with 11-50 employees

[Read full review](#) 

“Our primary use case for Barracuda SecureEdge is secure remote access and network security management for all users across different locations. It helps us provide secure connectivity to business applications and resources while maintaining consistent security policies. Barracuda SecureEdge has simplified network security and improved overall visibility..”

Sufiyan Shaikh

Senior Technical Support Executive at digital track

[Read full review](#) 

“Our main use case for Barracuda SecureEdge is to eliminate the traditional VPN connection for those people working remotely, so they will be automatically connected to the network.

Barracuda SecureEdge works to make it simpler for our end users to access our internal resources. It is more secure for them to access their resources, and we can also monitor it..”

Neil Naguna

Infrastructure & Support Senior Specialist at a retailer with 51-200 employees

[Read full review](#) 

“My main use case for Barracuda SecureEdge is for Microsoft 365, as it secures user access to applications like Salesforce, AWS, and Microsoft 365, but primarily it was used with Microsoft 365 when I utilized it.

“Barracuda SecureEdge helped with securing user access to Microsoft 365 by filtering internet content and blocking websites, as sometimes employees attempt to access sites they shouldn't. It protects us and a lot of the applications, and some of the other things we used it for would be deploying internet to new branches, whether it was a temporary site or a permanent one.

“My use case with Barracuda SecureEdge includes that it is really good for rapid office onboarding, as once you deploy internet, it is good for centralizing security control so you can have a small IT team manage and update security policies for thousands of users all over the world from just one dashboard, which is pretty good and actually excellent..”

Esther Sultaana

Storage Consultant Storage at Hewlett Packard Enterprise

[Read full review](#) 

“My main use case for Barracuda SecureEdge is a scenario in which we have a head office and some branches that need it. From the offices and from remote users who want to access some applications, we are using Barracuda security appliances because it is a good SASE platform. This gives the privilege to the users and the branch office users to access the application with Zero-Trust architectures. It also has good security inspection engines, including next-generation firewall features, IPS, IDS, antivirus, and malicious content detection. In this way, it is a very good platform, so we are using it for inspection for security purposes because it gives you a combined platform for network security as well as networking.

“Barracuda SecureEdge handles remote user access for our organization by providing a secure tunnel for remote users who want to access some applications hosted in cloud services, which gives the confidentiality and integrity of the data. We are very confident that the data is secure and that the user is accessing the application in a secure and CIA manner. In this way, we are compliant with some ISO 27001 compliance standards.

“We have many users across Dubai accessing the applications through Barracuda security gateways. Similarly, we have different branches in the Emirates accessing the applications through this appliance's security gateways. We are pretty confident that we are using it in our branch offices as well as for remote access to give us secure communications. It has very good capabilities, and it gives a unified platform from networking and security perspectives. This is a platform that gives you networking as well as security features, which the next-generation firewall provides..”

Verified user[Read full review](#) 

OT Cybersecurity Analyst at a government with 10,001+ employees

“Barracuda SecureEdge serves as our primary solution for providing secure connectivity and centralized network security for remote users, branch offices, and cloud applications.

“On a day-to-day basis, we rely on it for secure remote access, web filtering, policy enforcement, and monitoring network traffic.

“The centralized cloud management portal makes it easy to manage security policies, monitor user activity, and troubleshoot connectivity issues.

“It has helped us improve security, simplify network management, and provide reliable access to business applications for our users, regardless of their location.

“One practical example of how we use Barracuda SecureEdge for secure connectivity and policy enforcement in our organization is securing remote access for employees working from home or traveling.

“We use Barracuda SecureEdge to ensure that users can securely connect to internet applications and cloud resources through encrypted connections.

“Only authorized users are allowed to access sensitive business applications, while access to risky or non-business websites is blocked through web filter policy.

“The centralized management portal allows us to monitor traffic and apply security policy consistently across all locations, which has helped improve both security and operational efficiency across our organization.

“Another important aspect of our main use case for Barracuda SecureEdge is the simplicity of managing security and connectivity from a single cloud platform..”

karan rathod

network security engineer at a outsourcing company with 11-50 employees

Other Advice

“I would recommend Barracuda SecureEdge to other companies because of their security features, and the pricing is really good compared to other providers. I rated this review an eight..”

Neil Naguna

Infrastructure & Support Senior Specialist at a retailer with 51-200 employees

[Read full review](#) 

“My advice to others looking into using Barracuda SecureEdge would be to evaluate it against your business requirements and run a proof of concept. In our experience, it is easy to manage, scalable, and provides strong security and visibility. I would rate this product an 8 out of 10..”

karan rathod

network security engineer at a outsourcing company with 11-50 employees

[Read full review](#) 

“I would advise others looking into using Barracuda SecureEdge to run a proof of concept and focus on how the platform fits their operational needs. The centralized management and integrated security features are strong benefits, especially for organizations managing multiple sites or remote users. It is a solid solution that is straightforward to deploy and manage. I would rate this solution an 8 out of 10..”

Sandip Ade

Network engineer at a outsourcing company with 11-50 employees

[Read full review](#) 

“I would clearly assess your remote access and network security requirements before implementation. Barracuda SecureEdge is easy to deploy, simple to manage, and provides strong visibility and centralized control. Its cloud-based architecture helps an organization maintain consistent security policies while supporting a seamless user experience. Overall, it is a strong choice for an organization looking for a modern and scalable access solution.

“Barracuda SecureEdge has provided a valuable addition to our security infrastructure. It provides reliable secure access, centralized management, and strong visibility into Barracuda SecureEdge network. We are very satisfied with its performance and would confidently recommend it to organizations looking for a modern, secure access solution. I would rate this product a ten out of ten..”

Sufiyan Shaikh

Senior Technical Support Executive at digital track

[Read full review](#) 

“My advice to others looking into using Barracuda SecureEdge is that if the product meets your requirements and provides a unified platform to manage networking as

well as security, then Barracuda SecureEdge is one of the best options in terms of pricing and administrative management of this product. I would definitely recommend it because it offers good security features, including the Zero-Trust network, firewall-as-a-service, and provides IPS and IDS inspections as well.

“Regarding Barracuda SecureEdge's AI capabilities, I think its governance and security are strong. Nowadays, threat engines are integrated with intelligence threats. Barracuda's threat feeds come from universal, well-known entities such as CISA, which gives the privilege to the client to detect any malicious content and suspicious activities.

“Regarding Barracuda SecureEdge's AI capabilities, it does give detections for false positives. However, it is essential that human oversight remains important. Because of AI, you cannot rely on it one hundred percent. Barracuda makes decisions based on AI capabilities, so sometimes actual threats are detected while sometimes false negatives occur. Therefore, human intervention and oversight should always be a part of the process. I would rate this product an eight out of ten..”

Verified user

OT Cybersecurity Analyst at a government with 10,001+ employees

[Read full review](#) 

“Barracuda has added some major updates, including generative AI that gives admins the ability to track shadow AI tools and content inspection, among other things they have expanded their global infrastructure with access to POP regions in India, Germany, and maybe a few other countries.

“I chose a rating of nine out of ten for Barracuda SecureEdge because it is a phenomenal product, and I really appreciate working with it, especially with all the various features and the improvements they have made or additions, particularly with AI. I believe they have enhanced [ZTNA](#) capabilities, which will add multi-tunnel support, meaning users will be able to connect to resources across multiple

cloud points of presence in a single session, which is impressive.

“Regarding Barracuda SecureEdge's AI capabilities, it has shadow IT controls that can catalog unauthorized SaaS apps being used by employees and gives the IT team a chance to block them, which is necessary to prevent cyber attacks. You have AI tool management that inspects internal and external traffic, mapping out AI usage risk, allowing administrators to block or restrict generative AI prompts and prevent uploads of any proprietary files from the company. Additionally, data loss prevention monitors outbound traffic, detecting and stopping unauthorized transmissions of sensitive data.

“I do not have an issue with Barracuda SecureEdge's AI capabilities; the AI content filtering is really good as it looks at the text and queries from search engines, quickly categorizing risks such as harassment or reputation damage for a company. Profile accuracy is solid, and it is highly accurate, which means it can scan dynamic text pages. One of the biggest things is shadow AI, as it uses DNS telemetry to identify AI tools being used by employees.

“I was not involved in the pricing, setup cost, and licensing of Barracuda SecureEdge, as my involvement was focused on testing it.

“My advice for others looking into using Barracuda SecureEdge is to definitely do your due diligence for research and testing, and to understand your organization's needs and what it is being used for, as cost is a factor, and you have to discuss sometimes about cost versus what it would cost the company in the long run, focusing on the needs for cloud, on-site, or hybrid setups, and how many users are involved.

“For virtual appliances, Barracuda SecureEdge is very fluid for on-prem and private cloud setups, with virtual instances capable of scaling horizontally across hypervisors, and the maximum configuration ranges from the VT100 to the VT5000 instances. I would rate Barracuda SecureEdge a solid nine on a scale of one to ten..”
