 Webflow Business – Enterprise

Webflow Business - Enterprise Recap

Webflow Business - Enterprise offers a robust platform with advanced customization and high scalability, making it ideal for companies demanding flexibility in web development, efficient content updates, and superior SEO capabilities.

Webflow Business - Enterprise combines design customization without extensive coding, seamless integration capabilities, and enterprise-level security. Its staging site allows for safe content updates, while responsive design ensures compatibility across devices. The platform supports high traffic with automatic backups and advanced animations, boosting design effectiveness. Users benefit from CMS features and efficient content management, enhancing their ability to create diverse web applications like branded sites, event platforms, and marketing pages.

What features make Webflow Business - Enterprise stand out?

- **Flexible Customization:** Allows unique designs without extensive coding.
- **Staging Site:** Facilitates changes without affecting the live site.
- **Enterprise Security:** Manages high traffic with robust security measures.
- **Automatic Backups:** Ensures data safety and security.
- **Advanced Animations:** Enhances design efficiency and creativity.

What benefits should users look for in reviews?

- **Increased Lead Generation:** Enhanced designs improve lead potential.
- **Lower Bounce Rates:** Superior SEO leads to better engagement.
- **Streamlined CMS:** Facilitates quick development and content updates.
- **Efficient SEO Targeting:** Improves searchability and online presence.
- **Agency-Level Support:** SLAs and customer service offer critical assistance.

Companies utilize Webflow Business - Enterprise for its ease of use in diverse sectors like education and marketing. They find the SEO capabilities integral for launching dynamic web solutions without needing complex coding. Agencies appreciate its potential for creating customizable, responsive designs tailored to specific industry needs.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

“This is the best case scenario that I have because they went from a website that barely had 300 views in a year to a website that had 300 views in a month.”

Vanessa Silva

Manager, Digital Content & Global Project Management Specialist at CMA/CGM

“Webflow Business – Enterprise is an excellent tool where we can create complex designs and customizations while reducing almost 50% of work.”

Sarojini Gampala

Senior Web Flow Developer at NxtWave

“I am very happy with how Webflow Business – Enterprise works.”

Manavee Mondal

Senior Digital Content Specialist at Mobex

- ✓ “Webflow Business – Enterprise positively impacts my organization because we started with the CMS plan and then switched to the business plan, resulting in more leads and users.”

Mohamed B

Senior Product Designer & Webflow Expert at Lainsoft

- ✓ “Webflow Business – Enterprise has impacted my organization positively by providing a tool that gives a quick alternative to using WordPress because the whole WordPress hosting and server setup, doing mail SMTP, getting all the core plugins installed, it is good, but it is just a lot.”

Caleb Miller

WordPress architect and Full stack engineer at a marketing services firm with 1-10 employees

- ✓ “Without Webflow Business – Enterprise, if we were spending 10 million, we could save half with Webflow Business – Enterprise, spending only 5 million, and the time saved is significant as well because using manual processing takes more time compared to passing tasks through Webflow Business – Enterprise, which reduces time by about 70%.”

Purushothaman Manchu

data engineer at TECKPROS LLC

“Webflow Business – Enterprise is a perfect platform and I don't think we need to change anything.”

Verified user

Owner at a non-tech company with 51-200 employees

What users had to say about valuable features:

Webflow Business – Enterprise has impacted my organization positively as the Google PageSpeed scores went higher, but the mobile web scores went down. The decrease occurred because optimization needs more focus and more code to make it optimized. The web section improved and I saw faster loads for desktop users..”

Verified user

Marketing Director

“One of Mobex's web pages involved creating a comprehensive pricing page where we built multiple slider pages within one parent page displaying all their current pricing offerings to customers. This allows any user to visit, check out their pricing, and either contact or make payment via the website.

I can point to two measurable outcomes that have resulted from using Webflow Business – Enterprise. First, we experienced faster website deployment and increased leads. It is very easy to make changes and publish them before deploying to the main domain. You can also check it on the Webflow site to see what changes you made and how they are loading and appearing. After using Webflow, our bounce rate came down significantly. When we had the WordPress website, it was very dull and not a lot of content was rendering due to JavaScript issues. When people don't see an attractive website, they typically bounce off. Now we have many leads incoming, with many people filling our forms, checking out their pricing, and contacting us. We also checked our website using the LLMO Chrome extension that Adobe offers and saw that we have 100% readability for AI search engines or large language models, which is a very good score. All of this is credited to Webflow Business – Enterprise. .”

Manavee Mondal

Senior Digital Content Specialist at Mobex

[Read full review](#) 

“The best features Webflow Business – Enterprise offers is the ability to create web pages quickly without using customized code and to create web pages as if I were painting a picture or creating a diagram.

When I say it is like painting a picture or creating a diagram, I mean that I can come up with ideas in my head and I can put them down on the paper quicker, as long as they are not complex. I would not want to build an actual app in Webflow, but if I have an idea for a very simple design, something that does not utilize a bunch of elements jumping around the page, then I can do that easily using Webflow. I really would love to look into using it more in the future for quick builds; I work for somebody right now and might use it for them.

Webflow Business – Enterprise has impacted my organization positively by providing a tool that gives a quick alternative to using WordPress because the whole WordPress hosting and server setup, doing mail SMTP, getting all the core plugins installed, it is good, but it is just a lot. I feel that Wix is a little too basic. Webflow offers a nice intermediate value product where I do not feel like I am playing with Duplo bricks, but I am not building a 15,000 piece Lego set either. .”

CalebMiller

WordPress architect and Full stack engineer at a marketing services firm with 1-10 employees

“Webflow Business – Enterprise is a very great platform; with Webflow Business – Enterprise, we have created so many websites and it really helps us maintain the data, plus it has a great feature for taking backups automatically after some time.

“Webflow Business – Enterprise is a very time-saving platform because when we create a website, almost all templates are created in Webflow Business – Enterprise, allowing us to save time, and we do not need to add any custom coding for animations as the interaction options in Webflow Business – Enterprise help us make those animations.

“Webflow Business – Enterprise is very fast and it gives us two options of staging and live, so we can make our changes in a staging site and check the best possibilities and results before implementing the changes on the live site.

“We implement the code in the staging site in Webflow Business – Enterprise, so it does not affect the live site; the live site works fine as usual while we make changes in the staging site, and if everything is working fine, then we implement the changes on the live site..”

Verified user

Owner at a non-tech company with 51-200 employees

“Webflow Business - Enterprise is an excellent tool where we can create complex designs and customizations while reducing almost 50% of work. When we do traditional coding, it takes almost 10 days to build a sample webpage, but if we use Webflow Business - Enterprise, we can get it done in about 3-5 days, allowing quick delivery by reusing components. Many features contribute to this efficiency, including interactions, animations, and the recent GSAP animation integration for lightweight animation, along with LLM accessibility updates and automatic schema updation.

The best features Webflow Business - Enterprise offers, which have made the biggest difference for us, are its unique flexibility for both developers and low-code developers. We can quickly drag and drop things and add custom logic where needed, unlike Framer, where we cannot customize sitemaps or robots.txt files. We found WordPress to be complex in designing compared to Webflow Business - Enterprise, which is a great tool.

An interesting feature I would like to highlight about Webflow Business - Enterprise is the CMS-alone publishing capability, which allows our SEO team to quickly publish blogs without taking the entire site live while having other changes in the same project. The functionalities of the CMS, components, symbols, and interactions are all excellent..”

Sarojini Gampala

Senior Web Flow Developer at NxtWave

[Read full review](#) 

“Since I work with content and I create content all the time, I would say that the pages are one of the things that I feel are the most important for me. Of course, I'm a content creator. The bandwidth is also valuable because sometimes people have traffic spikes. And of course, since people are working hard on the SEO aspects of the website and they want people to come to the website, they will want that bandwidth because imagine if something clicks and people come to the website in mass. We don't know when that is ever going to happen, but we need to be prepared in that case. I feel that that's really important. On the other side, I feel that if I put myself in the shoes of the owners of the website or the business, I would feel that the security would be the most important in that specific case. Of course, as a content creator, that's not really my focus because I will assume that the subscription that I'm paying has that already. But in this case, if I was on the client side, I would think that security is main and it is key to know that no information is going to leak and that clients are safe. Their information is not going to be anywhere else and they know that they can navigate the website without having any problems. And I can, of course, having client areas and everything else, track what they are doing. I can improve my KPIs. I can do tests on the website and everything else. Security goes hand-in-hand with creating content. Although it's a bit far-fetched what I'm saying because I'm really reaching for that, but it makes sense if there is increased security on the website, people will feel more comfortable navigating, creating an account, and actually having a profile there. Then people can actually see what they're doing and track what they're doing and see where the areas are in which they can improve and upgrade things.

For starters, there is Webflow AI, but AI is already available in the paying plans to begin with. That helps a lot. For example, one can say I want a website with these many elements, a static page with these many elements and this is the text, this is a website about X and Y, and it will create a website or a landing page on the fly. Creating landing pages on the fly is extremely valuable. I feel that most companies don't even know how valuable it is to have a landing page for their products. That's one of the massive things that I would say is extremely valuable. Another one is the bandwidth because sometimes when people have a ton of traffic and it can happen, either because people have bots visiting their website to lower their time

on page, which has been happening a lot in the last couple of years, they need that bandwidth and it helps a lot to counter excess visitors on the website that are not usually normal for the website. Also, the pages, there are tons of pages available. I believe it is 300 or 400 pages that one can add. So people can have highly complex websites or can create highly complex elements within the website and it works pretty well. When it comes to the elements on the CMS, that's valuable, but that's from a developer side. I will not say that I have used most of them or ever exceeded them. But I'm not a developer, so I cannot dive too much into that. Other than that, I would say the security that one has with that plan and the fact that people can actually have priority access to support as well helps a lot. Also for websites that are really big, let me imagine for example a store or something like that. Although stores, I would say, would be better in other platforms. But this is a good way to actually have that safety. People have the SLAs to ensure that everything is respecting the guidelines. There is the security that is valuable, extremely valuable nowadays, especially once again, with the bots accessing websites to try to search for vulnerabilities as well as lower the time on page. There is that side of the security that is really important for most clients and especially clients that deal with sensitive information and client information and bookings and everything else. I feel that it is extremely valuable. In our case, we had a client area, so it was extremely valuable to have that client area safeguarded in some capacity. I believe that the company in question no longer has that client area because they no longer are accepting anything or any bookings through their website, but they had in the past. Since I left, I believe they changed that, so that's a pity. I would say the things that are most important in the enterprise side are the SLAs, the enterprise security for sure, and the support, because the support is invaluable. Sometimes one doesn't know what one is doing, sometimes some things may go awry and people don't know actually how to counter those and having help on the fly helps a lot..”

ROI

Real user quotes about their ROI:

I have seen a return on investment with Webflow; after switching, clients started to find us on Google or reach out to us after they liked how we presented our company, our website, our case studies, and started to reach out to us. From here, we could convert these prospective clients into customers.

Owner at a non-tech company with 51-200 employees

[Read full review](#) 

“My main use case for Webflow Business – Enterprise is to build websites using quick technologies rather than having to spin up an entire WordPress instance or having to utilize complex HTML wireframes.

I used Webflow Business – Enterprise to develop a website when I wanted to get a website off the ground quickly, and also, my friend had created the website in Webflow for me originally, so I saw no need to transfer out.

I created a website, caleb-miller.webflow.io, which is my personal music website, just as a hobby website. I intentionally did it in Webflow because the first person who did it built it in Webflow. In Webflow, I did the entire site in about three eight-hour days. If it was a WordPress site, to get the same front-end functionality, it would have been at least another day's worth of work to spin up the whole infrastructure and then probably another day to build it out in Elementor just because Elementor is more technically complex. Webflow is quick, so I would say it saved me about two days of development time for a standard six-page user website. .”

CalebMiller

[Read full review](#) 

WordPress architect and Full stack engineer at a marketing services firm with 1-10 employees

“I have been using Webflow Business – Enterprise since 2023. It was a suggestion by one of my friends who is a web developer. He said that it was an amazing opportunity to explore something that was fairly easy to use and fairly easy to understand when it comes to having a CMS that is quite able and that provides ample opportunity for people that don't know how to design websites to actually have a really neat website without having too much hassle. Additionally, when it comes to the business side, it actually provides ample opportunity to create a lot of things without spending too much and delivering amazing quality when it comes to speed and page speed insights and everything else when it comes to basically working by the rules of Google to rank and everything else when it comes to SEO.

Last year I was working with a client who is an agency. Up until then, they were using Wix as their primary option, which was not really that capable. When it came to exporting the content, it was not working at all. It was a hassle to actually move things from one side to the other. The opportunity that I gave them was to move to Webflow Business – Enterprise because that's the best opportunity for them to have a website that works well. They don't need too much to keep up with updates and everything else because the updates are already done by the system. As soon as they have a template, for example, for the visual of the website, if they don't have the money to design a website, it's fairly easy to set up and have everything working. It is a newcomer friendly platform, although it feels like it isn't, because it allows people to design when they don't even know how to design and code without seeing the code and without feeling overwhelmed. It was not really that difficult to convert the client to move to Webflow as soon as they saw the advantages and the safety that Webflow provides and how the price that they are paying is actually something that they are getting for time that they save. They don't need to worry about current updates because this is not anything like WordPress. They don't need to update plugins all the time. They don't need plugins at all. Therefore, it is much safer. Things are done in the back office. So there are not many worries for someone who is managing the website itself and doesn't know exactly how to code or how to design a website.

That agency's website, because what they had before looked like an amateur blog. For a digital agency, that's a bit weird, and what we wanted to achieve with

Webflow Business - Enterprise was to give it a more professional vibe, to make it so that people look at the website and understand that this is really a digital agency that takes things seriously because of their design. It is awesome and super sleek and works really well. Especially when it comes to that specific agency, they were selling websites and web design. If they were selling that and they were providing that information through a Wix website, which was not working that well, that would deter people from hiring them to design their websites. When we changed that and I was in charge of the change and the migration of everything manually, because unfortunately, Wix doesn't let people do a bulk export of blog articles, for example, I had to manually import everything. After doing everything from the setup to the integrations and then importing the content, it was fairly easy to manage and keep. It was fairly easy to teach everyone within the team how to use the platform because it's not that hard and not that complex. It may seem like it, but if people look at the back end, they will understand easily that it is fairly easy to manage everything and do everything there. This is the best case scenario that I have because they went from a website that barely had 300 views in a year to a website that had 300 views in a month. By March, they already had skyrocketed to twice as many views as the year before, and without putting that much effort into creating content because at that time we were still migrating the content. It made a massive difference when it came to the rankings, when it came to the performance, and when it came to people seeing the website and being that they are serious about it.

When it comes to web traffic, as I mentioned before, we went from what I believe was 350 visitors for the full year 2024 and four leads, or let me say four emails that they received. In the time that I was with them, I was with them for 11 months working freelance. In the first month since changing to Webflow Business - Enterprise, they had 300 and something visitors on the website in just one month. By the time that I left the company, they had over 4,000 visitors on the website and they had at least 15 form subscriptions or form submissions asking to work with them. Most were spam, but still, we had a couple of leads there that turned into business. I don't know how many because I was not part of that side of the business. When it came to the traffic, we saw the differences and it was massive how we were consistently getting more views and the content was already starting

to rank organically on Google without us basically doing much because Webflow is already created in a way that it is going to rank as long as people create valuable content and useful content and have everything when it comes to the SEO aspects, meta tags, and everything else. If people have that set really well, Webflow does the rest of the job for them..”

“When I was not part of the company, they were using WordPress, and the moment I joined, there was a migration to Webflow. This was a huge shift because WordPress is very outdated. Using Webflow unlocked new levels of creativity within the team. As the sole person dedicated to their social media, digital marketing, content marketing, and website creation, I initially faced a learning curve, but once I got the hang of it, it became very easy to use.

Webflow holds webinars that you can attend, and they are continuously evolving. I recently attended a webinar where they were integrating AI into Webflow, which is very beneficial. It helps you build websites more quickly and efficiently. Being in touch with the latest technology is something I have seen Webflow doing consistently. I have encountered very few problems in the two years, maybe two or three times. When I reached out to the team, they were very helpful and stayed in contact with us continuously, even checking in and following up after the issue was resolved. That support experience was excellent. .”

Other Advice

“My advice to others looking into using Webflow Business – Enterprise is that first, they need to decide what they want to use, and second, they should hire a webmaster. I would rate this product a 6 overall..”

Verified user

Marketing Director

[Read full review](#) 

“I would offer two pieces of advice. First, have patience because learning how to build pages and websites on Webflow is a learning curve, especially for someone who has not used it before. In my personal experience, when I started using Webflow two years ago, I had no prior experience. It was a definite learning curve for me, and only after receiving some guidance and learning on my own by experimenting with elements, containers, and layouts was I able to build pages efficiently.

Second, go for Webflow Business – Enterprise if you have a large business. When we started, our business was very small with only a few customers, so using the beginner levels of plans that Webflow offered was the most logical choice. As we moved forward and grew our customer base, we received many leads and customers, which allowed us to upgrade to the enterprise plan that Webflow offers. My overall rating for Webflow Business – Enterprise is nine out of ten. .”

Manavee Mondal

Senior Digital Content Specialist at Mobex

[Read full review](#) 

“The advice I would give to others looking into using Webflow Business – Enterprise is that if you are not a bonafide web developer, having not learned HTML, JavaScript, PHP, and other programming fundamentals, then go with Webflow. Honestly, it is fun, and you are going to have a fun time with it. Chances are, you are not really going to be able to make a super competitive site. One of the more important things that I have to say about it is that the version that I saw was not really competitive, in that it did not provide the same capabilities as other websites I saw. I see Webflow as a toy product still, just because it just has not reached that level. It is good; that is the angle. I do not want to give mixed signals here, but Webflow should not try to make another WordPress, another Shopify, or another Wix. They should do exactly what they are doing and just minutely hone it, because once you break into that A-list threshold doing your thing, then your product is really going to take off. It has already taken off, but it is not quite there for me yet; that would be my advice. I would give this product a rating of 8..”

CalebMiller

WordPress architect and Full stack engineer at a marketing services firm with 1-10 employees

“A specific example of a project we built using Webflow Business – Enterprise is our NxtWave website, ccbp.in, where we generally publish our blogs requiring the CMS plan. We took the Enterprise plan when we reached 1 million plus traffic on our site, as Webflow Business – Enterprise plan could cater to the traffic allowances when our site scales. We are also excited about the branching features that are available on Webflow Business – Enterprise.

I would suggest those looking into Webflow Business – Enterprise start with a basic plan depending on their traffic needs. If higher traffic or blog functionality is required, the CMS plan is necessary, and only larger entities needing simultaneous project work should consider the Enterprise plan.

I would also mention additional features such as localization and image optimization. Webflow Business – Enterprise has recently incorporated built-in image compression, eliminating the need for external tools such as Imgix that used to cost us \$105 a month to optimize images.

I would rate this product a 7 out of 10 overall..”

Sarojini Gampala

Senior Web Flow Developer at NxtWave

“Know exactly what one wants with their website. I know that the website is scalable and everything else, but people need to come with an idea, a specific idea of what they want. Do they want to have a full-on design unique to their website or are they just going to start with a template and develop the website from there? Do they need all the functionalities? If they don't need all the functionalities, maybe it's not the plan for them. Only invest in the plan if it makes sense. Are they just starting? Maybe it's not their plan or are they starting but the company is already big or has big ambitions and they know that it's going to deliver? Maybe this is their plan. It's all a matter of knowing their business to know if they need this plan

in specific.

I work mostly with content. If one were to dive a bit deeper, I believe a developer would be the better person to do that. They saved a lot of time. They are managing their content without needing someone to be a content manager for the website in specific because that was my task and I'm no longer with them. When it comes to the metrics, they had good performance on the website and everything else.

As a content creator, that's the thing that bothers me the most: the fact that there are no metrics whatsoever. They should have, in some capacity, something that Semrush has to help guide content towards matching SEO metrics or to have a better SEO score in terms of the writing itself. That could be a really interesting tool that they could bring to actually help people when they are creating blog content, to see if that content is actually hitting a specific keyword, if people have the density that it needs, if people have everything done correctly. I feel that's the thing that would be missing there.

I provide a review rating of 8 out of 10 for Webflow Business – Enterprise..”

“I have mentioned all the things about the features of Webflow Business – Enterprise.

“Webflow Business – Enterprise is a perfect platform and I don't think we need to change anything.

“There is no need to improve Webflow Business – Enterprise; it's working very great.

“We are using Webflow Business – Enterprise on the public cloud as well as our own premises.

“It's a great experience with the pricing and other things; Webflow Business – Enterprise is a great platform and provides us with the best price to work on the premium features.

“Webflow Business – Enterprise is a very time-saving platform; creating a website does not take that much time because of the many features and the inbuilt builder.

“Webflow Business – Enterprise is a great platform, and you should switch from other platforms because it's a time-saving platform with a lot of features we are using for our work and websites.

“Everything is fine with Webflow Business – Enterprise.

“Everything is fine; I don't think there is anything I should change for the future.

“I give this review a rating of nine out of ten..”

About PeerSpot

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
