TeamViewer

TeamViewer Recap

As a leading global technology company, TeamViewer offers a comprehensive suite of digital solutions, anchored by its industry-leading secure remote connectivity platform—enabling users to access, control, manage, monitor, and support any device, across platforms, from anywhere.

TeamViewer connects to a broad range of PCs, servers, and platforms globally. Available in over 30 languages, TeamViewer is a leading remote desktop tool with over 30,000 new downloads every hour. Currently, there are over 2.0 billion live TeamViewer IDs that access the world's largest and fastest remote connection network. We're serious about security, and we put our customers and their clients first when it comes to protecting them with the latest in technology.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

“Previously we spent around three hours to troubleshoot or resolve P1 issues, but now it takes around 45 minutes.”

Shubham-Agarwal

Manager - Projects at Cognizant

“During the initial phase of using it continuously, I realized this has been by far the most efficient and seamless working software for my organization and it was the best fit.”

Begaya Morris

Lead Software Engineer at BD

“TeamViewer Business is one of the best tools that we use in my organization for support, especially when our customers troubleshoot.”

Arun Moolchandani

Human Resources Manager at TP

- ✓ “There is a relevant return on investment, especially when my previous organizations assisted with remote access features, as rather than needing to go on-site, we could connect remotely, making it easier for those who are not tech-savvy, thanks to TeamViewer Business's user-friendly features, which helped immensely, especially when assisting elderly clients, and ensured we met metrics effectively, creating a significant positive impact.”

JIMRALD ABASANTA

IT NETWORK ENGINEER at KFUPM

- ✓ “Ever since we have been using TeamViewer Business, because of how quick it is to connect to a user across the globe, we have been able to close tickets rapidly.”

Tebogo Leshotho

IT Back Office Engineer (Cloud) at Digicall Group

- ✓ “One of the best features of TeamViewer Business is the security and respect for privacy, since you can connect to a specific computer using a unique confidential code, ensuring that security and safety are maintained with no problems.”

Ihafidhou Ext

Senior Application Support Consultant at Talentia Software

“TeamViewer has positively impacted my organization because it has helped us in saving a lot of time, as the process of conveying instructions is much simpler now, and we are able to provide better online training to our new staff.”

VishalRanjan

Chief Technology Manager at Doto Services

What users had to say about valuable features:

“The best feature of TeamViewer is that I can transfer software from my system to my client's system in just a few minutes. TeamViewer has positively impacted my organization by saving my time and improving client satisfaction. I save time because I don't need to visit the client's home or office, as I can do whatever the client wants while sitting in my office. TeamViewer saves me time each week, at least several hours compared to visiting clients in person..”

ChandanKumar8

IT Manager at Vedan Consultancy

[Read full review](#)

“The best features TeamViewer Business offers in my opinion are collaboration, templates, a high level of security, and session recording. Collaboration allows me to collaborate remotely with my team members. Besides reconnecting automatically, it provides a high level of security, protecting from cyber attacks and aids in providing assurance in regulated environments through two-factor authentication and end-to-end encryption features. It also allows recording live sessions, which can be replayed as needed for future reference.

“TeamViewer Business has positively impacted my organization as collaboration has enhanced, especially remote collaboration by 60 to 70 percent. I have been able to collaborate with clients and other team members seamlessly. Enhanced workflow efficiency includes faster approvals and a lowered risk of data loss, misuse, and leak through robust features like two-factor authentication and end-to-end encryption. It also facilitates compliance using documentation and auditing through recordings and logs..”

Begaya Morris

Lead Software Engineer at BD

[Read full review](#) 

“First of all, I can connect to any team or person using TeamViewer, and it is easy to access whatever functionality I want to use.

“The simplicity is what I find especially helpful, and apart from it, file accessibility and all that are very useful.

“I appreciate that its cross-platform compatibility is what I prefer the most. I can use TeamViewer on Mac or Windows and even on my Android phone. From anywhere, I can connect to any system, and it has rich features such as multi-monitors support, session recording, and remote printing, which I think are very good features.

“TeamViewer has helped us in collaboration and saved us a lot of time traveling between different locations. Without traveling to another location, we can directly access the system and accomplish whatever the requirements are per business needs, so it has saved a lot of time and money in that case..”

Verified user

[Read full review](#) 

Security Researcher at a tech vendor with 10,001+ employees

“In my opinion, the best features TeamViewer offers are, first and foremost, its screen sharing. The second best feature is video conferencing, and the third best feature is multiple-channel audio connectivity.

“Regarding how the multiple-channel audio connectivity has helped my team, we need to connect with our team members who work in different parts of the country. Sometimes we need to connect with them all together, and TeamViewer helps us in connecting with them with the help of audio and video calls all at once. That is why we prefer using this software for conducting online business meetings.

“TeamViewer has positively impacted my organization because it has helped us in saving a lot of time, as the process of conveying instructions is much simpler now, and we are able to provide better online training to our new staff. That is why TeamViewer is one of the strongest team management tools that we have used until now.

“I estimate that TeamViewer has helped us in saving approximately thirty to forty percent of our daily time expenses that we used to have before in complete training and giving instructions to employees of different domains. Now, everything is done through online channels and meetings before they attend the office..”

VishalRanjan

Chief Technology Manager at Doto Services

[Read full review](#) 

“TeamViewer Business provides a fast and secure connection along with a reliable chat feature for a smooth support section. I also appreciate the monitoring and asset management capability, which enhances the remote access experience for my team and me.

“TeamViewer Business provides seamless communication capability, which includes a variety of options such as chat, call, and video that enhance interaction with our remote clients.

“TeamViewer Business has been really helpful in my organization, where we are able to troubleshoot any issue our clients have and resolve it as quickly as possible. It enables me to fix the problem faster. If a customer's screen is not working or a glitch happens, I can simply share their screen into my screen through TeamViewer Business and rectify the issue rather than asking them to describe the problem via email. This saves a lot of time and is helpful for our customers who are buying our products.

“The best features TeamViewer Business offers include seamless communication, efficient remote access, and fast and secure connection..”

Arun Moolchandani

Human Resources Manager at TP

[Read full review](#) 

“The main feature we are using currently in the project is the log file transfer and remote desktop connection.

“The value of the log file transfer and remote desktop connection features for our team is the speed because those are accessible by the infrastructure team. Previously, whenever any production issues came up, we always had to rely on the infrastructure team. We always reached out to them, and based on their availability, they checked the logs. Now we have TeamViewer, so we can connect to the server, the remote server by using TeamViewer, and we can check the logs by ourselves as well. It ends the dependency on the infrastructure team, which speeds up the troubleshooting steps for the project.

“Faster troubleshooting is one of the main use cases we are experiencing after adopting TeamViewer. Previously, we had to rely on the infrastructure team for each and every activity because they had the complete access on the server. Whenever we had to troubleshoot anything or look into anything on the server, we always had to reach out to them. Now, we also have access, so there is less dependency, and whenever any super urgent or business-critical issues come up during non-business hours, whoever has the permissions on TeamViewer to connect to the remote desktop can resolve the issues very quickly.

“For P1 issues, we always have to resolve those issues within one hour or two hours. Previously, when we did not have TeamViewer, we had a long approval process to troubleshoot those issues. Since we adopted TeamViewer, it has reduced the troubleshoot time. Previously we spent around three hours to troubleshoot or resolve P1 issues, but now it takes around 45 minutes.

“Regarding the time saved, I have already shared one of the examples. For every production issue, we used to rely on the infrastructure team to log in to the server and check the logs, troubleshooting the issues. Right now, we use TeamViewer to connect to the remote server, which has reduced the time spent because we do not have to rely on the infrastructure team. It really improved the time because previously, we took around two to three hours to troubleshoot any production issues, but now we invest only 40 to 45 minutes to troubleshoot any of the critical production issues, so on the time saving metrics, we see a lot of ROI..”

Other Solutions Considered

“We have not evaluated other options because organization-wide, all the teams and projects use TeamViewer only. This was adopted by the company, so we are using TeamViewer only..”

Shubham-Agarwal

Manager - Projects at Cognizant

[Read full review](#) 

“I did not evaluate any other options; there are alternatives such as AnyDesk or even Windows' own remote desktop application, but the best alternative for quick, secure connections is definitely TeamViewer Business..”

JIMRALD ABASANTA

IT NETWORK ENGINEER at KFUPM

[Read full review](#) 

“Before using TeamViewer Business, we were using a different solution.

“The main factors that made me switch from AnyDesk to TeamViewer Business were reliability, sophisticated features, and strong security..”

Arun Moolchandani

Human Resources Manager at TP

[Read full review](#) 

“I previously used AnyDesk before TeamViewer Business. The reason I switched from AnyDesk is that TeamViewer Business mobile apps are excellent with specializing in remote control, file transfer, and device switching. AnyDesk mobile apps are also functional but are less accurate for precision tasks like cursor control. TeamViewer Business keeps a detailed session history by default, which includes access time, duration of the session, and device metadata, while AnyDesk has a limited storage protocol unless manual intervention is present..”

Begaya Morris

Lead Software Engineer at BD

[Read full review](#) 

“First, we used a product called AnyDesk, and the reason why we switched is because I did not find it corporate, because it lacked things like policies that one can set up. It also lacked integration services because we deploy our applications using InTune and sometimes using group policies. When we researched, we found that TeamViewer Business had at least more options for us to be able to use it for the entire organization.

“The only one that we worked on was AnyDesk, nothing else..”

Tebogo Leshotho

IT Back Office Engineer (Cloud) at Digicall Group

[Read full review](#) 

“If you are using any other solution, I believe that from my point of view, I have actually tried a couple of software on a personal level and a corporate level. For corporate, I would recommend TeamViewer Business because of their team that is always working to innovate and also have new features available. For the mere fact that so far, or by far, TeamViewer Business when you configure it correctly, it will give you full access and you will not have any problems connecting to the client. There are features such as Quick Support, which are cross-platform. File transfers are easy to do, and also, as an administrator, it is easier for me to track who is consuming licenses and how they are consuming licenses, because I can have granular permissions and actually assign permissions as I feel is right. Depending on your experience and depending on your role in the company, you can manage devices, put them into groups, and manage custom modules. It makes it so much more corporate friendly because you can also add branding to your configurations. That is something that is very important, especially now in the era of cyber attacks. If you install an application on the user's desktop and when they open it, they see the company logo, it makes them trust the company and trust the application that it is actually a company application, so you can only get that if you are using TeamViewer Business..”

Tebogo Leshotho

IT Back Office Engineer (Cloud) at Digicall Group

[Read full review](#) 

ROI

Real user quotes about their ROI:

“If I take an estimation of one month, I save around eighty to ninety hours just because of TeamViewer. The traveling time it saves when traveling between different locations definitely has an impact, so it has impacted the efficiency part as well..”

Verified user

Security Researcher at a tech vendor with 10,001+ employees

[Read full review](#) 

“The ROI was great. TeamViewer helped us in conducting business meetings and conveying information in a much easier and smoother way. We are now able to do all these events by conducting online meetings and sharing our screens. That is why we are able to save a lot of time and money after installing TeamViewer in our company..”

VishalRanjan

Chief Technology Manager at Doto Services

[Read full review](#) 

“I have seen a return on investment. This tool has enabled us to enhance workflow efficiency with faster approvals and lowered risk of data loss, misuse, and leak. It has facilitated compliance using documentation and auditing through records, recordings, and logs, and has boosted collaboration, especially with our clients and team members remotely or in the office..”

Begaya Morris

Lead Software Engineer at BD

[Read full review](#) 

“At this moment, I really cannot say I have seen any ROI. All I can just say is that there is some time saved, especially knowing that I have got devices already deployed on my admin portal. It is easy for me to update or upgrade certain things for the devices, so it saves you a lot of time, especially when you have to deal with upgrades for the application. I would think that is a very valuable feature from TeamViewer Business..”

Tebogo Leshotho

IT Back Office Engineer (Cloud) at Digicall Group

[Read full review](#) 

“There is a relevant return on investment, especially when my previous organizations assisted with remote access features. We were in very tight schedules to resolve issues, and it did save a lot of money. Rather than needing to go on-site, we could connect remotely, making it easier for those who are not tech-savvy, thanks to TeamViewer Business's user-friendly features. This has helped immensely, especially when assisting elderly clients, and ensured we met metrics effectively, creating a significant positive impact..”

It really improved the time because previously, we took around two to three hours to troubleshoot any production issues, but now we invest only 40 to 45 minutes to troubleshoot any of the critical production issues, so on the time saving metrics, we see a lot of ROI..”

Shubham-Agarwal

Manager - Projects at Cognizant

[Read full review](#) 

Use Case

“My main use case for TeamViewer is for client software installation in the client system. I connect remotely to the client's computer and handle the installation from start to finish. I connect with the client system through TeamViewer and operate the system to smoothly install all software in the client system..”

ChandanKumar8

IT Manager at Vedan Consultancy

[Read full review](#) 

“Our main use case for TeamViewer Business is that we use this tool on a daily basis to provide remote support to our clients, usually to solve issues with their software, to give training sessions, and being able to record the session with multiple users. I control their computer to help them install and execute new updates and configurations. It works very well with us and also our clients since it is easy to download, install, and use..”

Arun Moolchandani

Human Resources Manager at TP

[Read full review](#) 

“I use TeamViewer to connect to a remote system and gain access to the system to troubleshoot whatever issues clients or teams are facing and resolve them. Sometimes, we also need to connect to some critical systems which we directly cannot access, so we use TeamViewer as a mediator to communicate between us and that system.

“Around two months back in March, I had to directly access a system where a data breach had happened, and I needed to get details of that system and access it. At that moment, I was not at that location; it was far from my current location and was a remote location. I directly used TeamViewer and connected to that system, and with the help of this, I saved a lot of time and effectively resolved that issue within a short time.

“To connect with my team who are at different locations and guide them on how to use the different types of software that come into the market, TeamViewer is very handy..”

Verified user

Security Researcher at a tech vendor with 10,001+ employees

[Read full review](#) 

“My main use case for TeamViewer is that it is a software that helps us in sharing our screen with different types of other team members working in our company.

“We used to share our mobile and laptop screens with the help of this tool to discuss different services and real-time challenges.

“A specific example of a time when I used TeamViewer to solve a real-time challenge occurred when we provide doorstep car detailing services to our customers. This generally happens whenever our team member visits our client's address and gets stuck while executing the services. We connect with them with the help of TeamViewer and share each other's device screens so that we can give them proper assistance, and all the services can be done properly and gently.

“I definitely use TeamViewer for team training, as sharing the screen is one of the integral parts of our business. TeamViewer helps us in sharing details and our devices' screens with each other. We train our new interns by sharing our mobile device and conveying all the real-time data with them..”

VishalRanjan

Chief Technology Manager at Doto Services

[Read full review](#) 

“My main use case for TeamViewer Business is that it is a very reliable, fast, and secure remote access software. I have been using this for eight years and above for remote access. I typically use this to collaborate with the back end for guiding me through specific templates, labeling, and meeting quality standards. It lets me switch between devices easily, which is very convenient. I do not have to wait for any approval to log into the systems at any time.

“Besides, it reconnects on its own once the remote machine reboots and comes online. It provides a high level of security, protecting from cyber attacks and aids in providing assurance in regulated environments through two-factor authentication and end-to-end encryption features.

“A specific example of when I use TeamViewer Business for remote access or collaboration with the back end is when I was working on a LaTeX formatting of a math problem where I faced some issues with spacing the character. One of the back-end team members connected me via TeamViewer Business, took control of my system, and explained the spacing in characters to me in real time. It was amazing to learn in real time, ask questions, and watch them perform the task on my system. I also added the session notes where I could refer later. That really gives a lot of confidence.

“I also appreciate that notes can be added once the session ends, which gets logged as well with history. This helps in differentiating one session from another in case of multiple back-to-back sessions..”

Begaya Morris

Lead Software Engineer at BD

[Read full review](#) 

“We typically use TeamViewer to connect to the remote desktop because we are using Airflow and Snowflake, so all are deployed to different servers. Whenever we have a requirement to troubleshoot any production issues or review the logs, we connect to those servers via TeamViewer and troubleshoot the production-related issues.

“Recently, we connected to the remote desktop for troubleshooting one of the production issues, as one of the data pipelines was failing in the production. When we tried to troubleshoot by using Airflow, TeamViewer was not showing any error, so ultimately, we had to review the Apache logs to troubleshoot that issue, but that is hosted on a different server. We always connect to the remote desktop or the remote server by using TeamViewer. At that time, we checked the logs, downloaded the logs, or transferred the logs to our local system, and then we transferred it to our infrastructure team. The infrastructure team reviewed those logs and found out the exact reason regarding the issue. This is the use case we used recently last week.

“In the past, we used TeamViewer for the screen recording and the screen sharing sessions as well because we have different teams, like the development team, the QC team, and the clients. Whenever we have to collaborate to troubleshoot any issue or look into any specific area related to the server, we quickly jump on a call and share the screen through TeamViewer. This speeds up the troubleshooting and, during the call itself, we can resolve the issues very quickly..”

Shubham-Agarwal

Manager - Projects at Cognizant

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“My experience with pricing, setup cost, and licensing for TeamViewer Business is minimal. I mainly used it and was provided with a license, so I did not see anything about costs and pricing..”

Verified user

[Read full review](#) 

Senior IT Support at a tech vendor with 1,001-5,000 employees

“Using TeamViewer Business allows fewer employees to be needed because it enables solving many issues remotely, thus saving costs, as there is no need to send consultants to the client's site every time..”

Ihafidhou Ext

[Read full review](#) 

Senior Application Support Consultant at Talentia Software

“My experience with pricing, setup cost, and licensing is that the price is competitive and relative, but it is a very user-friendly and affordable tool. Compared to the features it offers, this tool is more cost-effective. It is also very easy to set up, especially through the help of customer support, which is very proactive, easy, and professional..”

Begaya Morris

Lead Software Engineer at BD

[Read full review](#) 

“The pricing, setup cost, and licensing for TeamViewer Business are relatively very competitive and cost-effective. Any size of organization can afford this tool, making it very cost-effective. It is also easy to set up, and I have had no issues with that, especially because the customer support is very proactive and provides timely assistance when needed..”

Arun Moolchandani

Human Resources Manager at TP

[Read full review](#) 

“Currently, we are just using TeamViewer Business on a public cloud basis, where we just prepare TeamViewer Business Host configurations and then deploy them via InTune or by manually installing the application. There are not any extreme configurations that are actually done..”

Tebogo Leshotho

IT Back Office Engineer (Cloud) at Digicall Group

[Read full review](#) 

“The reason we opted for TeamViewer Business is because of the security and compliance. A simple installation of an application usually takes ten to fifteen minutes, but when we connect with TeamViewer Business, we can do it in a minute, or usually, we can install it in a five-minute timeframe..”

Muralidhar K

IT Manager at SignDesk

[Read full review](#) 

Customer Service and Support

“Customer support for TeamViewer is quite slow. They do reply, but the reply timing is more than forty-eight hours, which is not acceptable for any service industry..”

VishalRanjan

Chief Technology Manager at Doto Services

[Read full review](#) 

“The customer support for TeamViewer Business has not been a consideration for me because everything worked well, so I never talked with their support team..”

Verified user

Senior IT Support at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

“I have not had to reach out for help with TeamViewer right now because it is quite stable. During the initial setup, our infrastructure team reached out to the support executive of TeamViewer because we faced some issues, and we got full support from them..”

Shubham-Agarwal

Manager - Projects at Cognizant

[Read full review](#) 

“Since 2007, I have not needed to reach out to TeamViewer Business's customer service or support team because I have not experienced any issues with the application, which speaks volumes about its reliability..”

JIMRALD ABASANTA

IT NETWORK ENGINEER at KFUPM

[Read full review](#) 

“My experience regarding pricing, setup cost, and licensing for TeamViewer Business is fluid, as the commercial team is very available to assist and provide services, and we are all satisfied to have TeamViewer Business..”

Ihafidhou Ext

Senior Application Support Consultant at Talentia Software

[Read full review](#) 

“I once reached out, especially when I wanted to find out about TeamViewer Business, especially with the integration of Microsoft Teams, where I found out that you can actually use TeamViewer Business as an app on Microsoft Teams. That got me interested, and then I just reached out just to find out how it works and the support was happy to assist me. They showed me how it would work and then that is also a great feature that I really like, the Microsoft Teams app for TeamViewer Business..”

Tebogo Leshotho

IT Back Office Engineer (Cloud) at Digicall Group

[Read full review](#) 

Other Advice

“TeamViewer is a great platform for service-related businesses, and all the service industry owners should try it. I have provided a review rating of nine for this product..”

VishalRanjan

Chief Technology Manager at Doto Services

[Read full review](#) 

“Regarding TeamViewer's AI capabilities, the security is absolutely adequate. TeamViewer's AI capabilities are absolutely different from others; other viewer apps do not match its accuracy and reliability of output. I advise others looking into using TeamViewer to switch from other software to TeamViewer. I gave this review a rating of 7..”

ChandanKumar8

IT Manager at Vedan Consultancy

[Read full review](#) 

“If you are choosing TeamViewer to use, check your pricing because sometimes its pricing can be a little high for your organization if you have a very tight budget. But if you have a budget, then definitely it is the best tool to use in the market for remote connections to any system; I think it is better than its alternatives in the market. I would rate this product an eight out of ten..”

Verified user

Security Researcher at a tech vendor with 10,001+ employees

[Read full review](#) 

“I started with the trial version for seven days. During the initial phase of using it continuously, I realized this has been by far the most efficient and seamless working software for my organization and it was the best fit. TeamViewer Business is a reliable, fast, and secure remote access software. I would rate TeamViewer Business eight out of ten based on its security, ease of use, cost-effectiveness, and facilitation of collaboration even in remote areas.

“My advice to others looking into using TeamViewer Business is to start with the trial version to experience the software firsthand and determine if it is the right fit for your organizational needs..”

Begaya Morris

Lead Software Engineer at BD

[Read full review](#) 

“My advice for others looking into using TeamViewer is that if you are going to implement it in your project, there should be a proper authentication mechanism. If there are multiple developers in your team, access should not be given to each and every user, as this can breach security and create other issues. Before connecting to the remote server, a proper authentication mechanism and approval

process should be in place. Only authorized persons should be able to connect to the remote server, and there should be a proper internet connection because without it, you can see a lot of lag or frequent disconnectivity issues.

“I have already shared all the details, but one advice I want to give regarding multiple sessions is that whenever we connect to multiple remote sessions to different servers, sometimes it is quite hectic to jump from one server to another server. If they can improve in that area, it will be quite helpful. I give this review a rating of 9 out of 10..”

Shubham-Agarwal

Manager - Projects at Cognizant

[Read full review](#) 

“I use [Amazon Web Services](#) for our hybrid deployment.

“TeamViewer Business is one of the best tools that we use in my organization for support, especially when our customers troubleshoot. It is very fast.

“We do not require physical onsite support as it can be managed remotely, which makes a positive impact. I do not need to send an engineer to the remote location on a monthly basis to check our clients' devices if they are working. This has greatly saved us time and cost for traveling since we can manage it on our side remotely. Improved productivity by fixing issues instantly is a significant advantage. TeamViewer Business has been really helpful in increasing productivity with clients due to ease of access to their systems. Virus scanning while files are shared is not provided, which is a concern because we frequently deploy new applications in client systems. That is something that should be improved. A connection between two teams is much easier, saving time. Lastly, it improves the efficiency of the team and reduces office visits for simple tasks. It is also a convenient tool with multiple use cases.

“I would give TeamViewer Business a rating of eight out of ten.

“I chose eight out of ten because TeamViewer Business is an industry standard, widely used remote access tool with excellent security controls. It is easy to work with instead of explaining how to do the installation. We are able to cater to our clients in a timely manner when they troubleshoot on our side, enabling us to resolve their issues promptly. It makes it easier when I get issues on our laptops that need urgent attention and assistance from the tech and IT teams to remotely connect to our PCs in order to troubleshoot any issues easily, saving a lot of time. It is also a very appropriate tool for team meetings and stand-ups.

“TeamViewer Business is well-suited for small, medium, and large-scale organizations looking for a remote support solution. It will help the technical team to remotely support company employees and clients for system-related issues, providing them with advantages in remote support experience.

“My company is a customer of this vendor with no other business relationship.

“This tool has increased our productivity by allowing us to troubleshoot and fix system-related issues remotely. It has improved our remote support experience and enabled us to access and control various devices, including PCs, Macs, smartphones, and tablets, easily..”

About PeerSpot

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
