Product Recap

Jamf Protect

Jamf Protect Recap

Jamf Protect provides comprehensive security for Apple devices, aiding in malware protection, threat prevention, CIS benchmarks, and USB blockages while supporting local accounts and password sync.

Designed for managing Apple devices, Jamf Protect offers robust security features, such as malware detection and prevention, unauthorized data transfer blocks, and enhanced security profiles. It allows seamless deployment and upgrades of applications, coupled with efficient endpoint management. The tool ensures zero performance impact while providing real-time notifications for password updates and comprehensive data protection across all Mac OS versions.

What are Jamf Protect's most notable features?

- **Quick OS Updates:** Ensures devices are always up-to-date with the latest OS releases.
- **Zero Performance Impact:** Doesn't strain CPU resources, ensuring smooth laptop performance.
- **Real-time Notifications:** Delivers timely alerts about password updates and security threats.
- **Comprehensive Data Protection:** Guards against malware, data transfers, and external drive threats.
- **Zero-touch Integration:** Simplifies deployment and device management without manual intervention.

What benefits do users see in reviews?

- **Enhanced Security:** Significant reduction in malware and unauthorized data transfer incidents.
- **Efficiency:** Streamlined device management and application deployment save time.
- **Performance:** Lightweight design ensures devices run smoothly without slowing down.
- **Proactive Threat Detection:** Early detection and prevention of potential threats safeguard data integrity.

Industries such as education, healthcare, and finance leverage Jamf Protect to maintain stringent security standards, streamline application deployment, and ensure devices meet compliance requirements. They benefit from real-time threat alerts, comprehensive data protection, and zero-touch integration, enhancing overall operational efficiency.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

“Jamf Protect has had a positive impact on my organization, as it has been one of the best tools that protects against malware.”

Nick Rudman

Project Manager at Wells Fargo

“The features I find most valuable in Jamf Protect are amazing because any malware or any viruses can harm the entire fleet, and Jamf Protect takes action and protects against any alerts, and we are safe from any viruses and any attacks from the entire world.”

Amira Youssef

Server Administrator Coordinator at Cairo American College

“Jamf Protect has had a very positive impact on my organization; it has improved my visibility into endpoint activity across my macOS fleet, strengthened my security detection capabilities, and reduced the time required to investigate and respond to security incidents.”

Chetan Chawla

Lead Product Security Architect at a tech vendor with 1,001-5,000 employees

- ✓ “Jamf Protect impacts my organization positively by creating an ecosystem that delivers a massive shift in both risk reduction and operational speed.”

Yousef Almomani

Systems Engineer at a consultancy with 51-200 employees

- ✓ “If some other organization is using Jamf Pro, they should definitely go for Jamf Protect, as that will streamline many things for them.”

anonymous1

Endpoint Engineer Manager at a tech vendor with 10,001+ employees

- ✓ “If your fleet consists completely of Apple devices, Jamf Protect is the best solution for you.”

Amira Youssef

Server Administrator Coordinator at Cairo American College

- ✓ “Jamf Protect offers next-generation antivirus and Apple specific defense features, with real-time updates that block or look for any malicious software on the device, such as Trojans or crypto miners, so people feel secure and we feel secure as administrators that end users are protected from ransomware and other kinds of malicious software.”

Ahtisham Mirza

Senior System Administrator at a computer software company with 11-50 employees

What users had to say about valuable features:

“Jamf Protect offers protection for Mac devices among its best features.

“I find especially valuable aspects in threat protection, deep scans, and deep native macOS integration with Apple's own security firmware.

“Jamf Protect has positively impacted my organization by reducing malware, spam, and these kinds of threats from our company. It saves time for our IT team when we deploy this, as it reduces the noise and we do not have to worry about those threats..”

Verified user

Systems & Cloud Architect at a computer software company with 11-50 employees

[Read full review](#) 

“In my opinion, the best features Jamf Protect offers are security and compliance.

“What stands out about the security and compliance features for me in Jamf Protect is the immediate alerting of the system while users have their freedom of using the devices.

“Using AI tools recently, Jamf Protect has positively impacted our organization because many AI tools have some security holes, so it is helping us to be safe while users are exploring AI tools.

“We did have an instance recently where ChatGPT blocked some versions because of security concerns, so once this happened from the vendor, Jamf Protect took the actions and blocked these app versions and enforced the users to update to the newer version..”

Amira Youssef

Server Administrator Coordinator at Cairo American College

[Read full review](#) 

“The best features Jamf Protect offers include the unified endpoint security framework integration, Mac-specific behavioral analytics, integrated mobile threat defense, and web filtering.

“The unified endpoint security framework integration and Mac-specific behavioral analytics help my organization because both of these features work together to solve what used to be a massive headache for our IT and security team. Mac security tools had to use kernel executions or KEXTs, which essentially provide deep system access that resides in the most sensitive layer of the operating system. If the security agent had a bug, conflict, or any error, it would cause a kernel panic, and the Mac would experience a kernel panic, which is similar to the blue screen of death in Windows, causing the user's computer to crash instantly.

“Jamf Protect impacts my organization positively by creating an ecosystem that delivers a massive shift in both risk reduction and operational speed..”

Yousef Almomani

Systems Engineer at a consultancy with 51-200 employees

[Read full review](#) 

“Jamf Protect offers good telemetry and auditing capabilities. We can use Jamf Protect for auditing purposes and for meeting our minimum compliance requirements. We can also use Jamf Protect for whitelisting USB devices. The one limitation is that you cannot replace the antivirus completely with Jamf Protect, so you cannot consider it as a complete antivirus solution. However, you can use a few features of Jamf Protect.

We use Jamf Protect for telemetry and auditing because we collect telemetry data and hand it over to the security team. Regarding how beneficial it is, the security team has said that the previous application we were using for auditing and telemetry did not provide data that was as granular. I do not audit anything myself because I am in the engineering part. However, the security team has been continuously saying that the data we get from Jamf Protect is quite granular and quite helpful. After using Jamf Protect, they have been able to put many restrictions in place that they previously thought were not necessary. They have come to us asking whether we can implement this feature or that feature into the process. There were many things that we were previously allowing, thinking they would not cause any issues in the environment. However, using the data from Jamf Protect, they came to the conclusion that certain features could be a big issue in the coming days or could be a threat. They have asked us to stop those features on the Mac. I am not sure about the specifics of how they are using the data because there is a specific security team that manages all of these details.

If some other organization is using Jamf Pro, they should definitely go for Jamf Protect. That will streamline many things for them..”

anonymous1

[Read full review](#) 

Endpoint Engineer Manager at a tech vendor with 10,001+ employees

“The features I find most valuable in Jamf Protect are amazing because any malware or any viruses can harm the entire fleet. Jamf Protect takes action and protects against any alerts, and we are safe from any viruses and any attacks from the entire world.

“The real-time monitoring of Jamf Protect has helped to identify threats swiftly as this morning I just got about 200 alerts from ChatGPT. Recently, they announced that they have some revokes, and fortunately, Jamf Protect was able to detect this threat and take action immediately, blocking the ones that would harm the machine and alerting us for those that have warnings.

“I assess Jamf Protect's endpoint telemetry data as enhancing our threat detection process a lot because without Jamf Protect, we would be unsafe at all.

“I use Jamf Protect's advanced analytics to get reports about future threats and any malware detections coming in the tech field, so it helps me analyze and see if we need to be more protective and apply more rules to the clients to be safer.

“I assess the integration with Jamf Pro for improving security policy enforcement as great because the reports I'm getting from Jamf Protect help me take action in Jamf Pro.

“Jamf Protect's compliance automation has helped us adhere to industry standards, as for our standards, it matches very well. I have tailored some of the policies and rules based on the environments we are in, but in general, it's very compliant for our environment..”

Amira Youssef

Server Administrator Coordinator at Cairo American College

[Read full review](#) 

“The best features that Jamf Protect offers are basically real-time visibility. It gives insights into suspicious activity, attacker techniques, and helps to detect emerging threats and unusual behavior. It has behavior-based threat detection that is really helpful. Another valuable offering from Jamf Protect is integration with SIEM tools and SOAR workflows.

“The behavior-based detection is particularly valuable because it focuses on suspicious activities rather than relying solely on malware signatures. In my environment, this helps me identify emerging threats, unauthorized tools, and potentially malicious behavior that traditional signature-based solutions might miss. For example, Jamf Protect can alert on unusual process execution, privilege escalation attempts, persistent mechanisms, or suspicious network connections. This gives my security team early visibility into potential threats and reduces the risk of undetected compromise.

“Regarding SIEM and SOAR integration, I forward Jamf Protect telemetry and alerts into my centralized SIEM platform, which is QRadar, where they correlate the logs from EDR, identity, cloud, and network security tools. This provides a complete view of security events across the organization and helps analysts investigate incidents more efficiently. On the SOAR side, I have automated workflows to enrich alerts, assign incidents to appropriate teams, and trigger predefined responding actions.

“Jamf Protect has had a very positive impact on my organization. It has improved my visibility into endpoint activity across my macOS fleet, strengthened my security detection capabilities, and reduced the time required to investigate and respond to security incidents. The centralized monitoring and integration with my security operation tools have increased operational efficiency as well. Overall, it has enhanced my security posture while allowing me to manage and secure macOS devices more effectively at scale..”

Chetan Chawla

Lead Product Security Architect at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

Other Solutions Considered

“I previously used to have some level of limited platforms such as McAfee antivirus before Jamf Protect, but it was mainly for viruses, not compliance and security, so this is a huge change when using Jamf Protect to protect our device fleet..”

Amira Youssef

Server Administrator Coordinator at Cairo American College

[Read full review](#) 

“I think Jamf Protect is the best option on the market thus far for the Mac ecosystem. If we were in another ecosystem like Windows, I don't think Jamf Protect would work since it doesn't actually work in the Windows environment..”

Amira Youssef

Server Administrator Coordinator at Cairo American College

[Read full review](#) 

“I evaluated several endpoint security options before choosing Jamf Protect. The products I looked at included CrowdStrike Falcon, Microsoft Defender for Endpoint, SentinelOne, and VMware Carbon Black..”

Chetan Chawla

[Read full review](#) 

Lead Product Security Architect at a tech vendor with 1,001-5,000 employees

“We did evaluate other options before choosing Jamf Protect. Those were CrowdStrike Falcon for Mac, SentinelOne, Defender, and Kandji. We chose Jamf Protect because it was a native Apple ecosystem fit..”

Verified user

[Read full review](#) 

Systems & Cloud Architect at a computer software company with 11-50 employees

“I have not been working with MetaDefender. I think someone took me wrong in a previous conversation. I have been working with Defender for quite long, about three to three and a half years. However, I have not worked on any Meta products. I have worked with Microsoft Defender, not MetaDefender..”

anonymous1

[Read full review](#) 

Endpoint Engineer Manager at a tech vendor with 10,001+ employees

“Before Jamf Protect, I relied primarily on a combination of traditional endpoint security tools and native macOS security controls. While those solutions provided baseline protection, they did not offer the same level of macOS-specific visibility, behavior analytics, and threat detection capabilities. I evaluated Jamf Protect because my Mac footprint is growing, and I needed a solution that was purpose-built for Apple devices and integrated well with my existing management and security ecosystem. The main reasons I switched were improved visibility into endpoint activity, stronger macOS-focused threat detection, better integration with my security operations workflow, and the ability to gain deeper telemetry for investigation and threat hunting..”

Chetan Chawla

Lead Product Security Architect at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

ROI

Real user quotes about their ROI:

“I have seen a return on investment because, as I mentioned before, when I receive an alert, Jamf Protect works to solve the alert. It saves a lot of time..”

Yousef Almomani

Systems Engineer at a consultancy with 51-200 employees

[Read full review](#) 

“I have not seen return on investment since our school is a nonprofit organization, but from the security perspective, I have. If you imagine you have 1,000 computers to protect, if any harm happened to these 1,000 computers, that is an ROI because it would damage our assets, affect our environment, and impact the budget as well..”

Amira Youssef

Server Administrator Coordinator at Cairo American College

[Read full review](#) 

“I have seen a positive return on investment from Jamf Protect, although the biggest benefits have been risk reduction and operational efficiency rather than direct headcount reduction. From a time-saving perspective, I have reduced the time required to investigate macOS security alerts by roughly 30 to 40%. Analysts can quickly access the endpoint telemetry and contextual information without manually gathering data from multiple sources..”

Chetan Chawla

Lead Product Security Architect at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

“It is value for money. For example, for just \$4 or \$5 per user license, I get endpoint protection, including some DLP capabilities like screenshot tracking. Normal antivirus doesn't offer that.

They also provide zero-hour protection. If new malware emerges, they quickly push an update to all endpoints. No other product I know of offers that kind of speed and support.

Microsoft takes a week, Apex three to four days, but Jamf, because of their close partnership with Apple, gets it done much faster. I don't think any other MDM solution for Mac comes close to what Jamf provides.

Intune and others work with various platforms, not just Mac. Jamf Protect is specifically designed for Apple devices..”

Hitesh Sharema1

IT Compliance Project Specialist at Avizva

[Read full review](#) 

Use Case

“My main use case for Jamf Protect is endpoint security and threat detection for Apple devices: iPad, iPhone, and Macs. We use it to monitor, detect, and respond to Mac threats..”

Verified user

Systems & Cloud Architect at a computer software company with 11-50 employees

[Read full review](#) 

“My main use case for Jamf Protect is to provide purpose-built endpoint detection and response, antivirus, and mobile threat defense specifically for macOS and Apple devices. Jamf Protect guarantees day-one operating system upgrade and network layer threat defense while providing cellular cost savings..”

Yousef Almomani

Systems Engineer at a consultancy with 51-200 employees

[Read full review](#) 

“I installed Jamf Protect on my Mac devices and set it up to protect them from malware and other issues. I use Jamf Protect in Jamf Pro as part of our antivirus solution. Jamf Protect is deployed in my organization on public cloud. We were using MS Defender before Jamf Protect. I decided to switch from MS Defender to Jamf Protect because of the Jamf Pro integration and Jamf Protect being specifically for macOS. As it is already integrated with Jamf Pro, Jamf Protect is always good for me, so I do not have any kind of recommendations for improvement..”

Ahtisham Mirza

[Read full review](#) 

Senior System Administrator at a computer software company with 11-50 employees

“My main use case for Jamf Protect is to protect our fleet.

“I mainly use Jamf Protect to protect against malware, viruses, and hacks to the devices, and it also applies compliance to the device. If a user is using any breach password, we will be alerted and take action immediately.

“Our main concern is to protect the applications users are using as well with Jamf Protect. Because we are giving them power privileges to install apps, this is quite a concern for us if they install inappropriate apps or apps that are not safe enough for them. I will immediately get alerts from Jamf Protect if any applications are not safe to have on the devices..”

Amira Youssef

[Read full review](#) 

Server Administrator Coordinator at Cairo American College

“ ”

I initially started using Jamf Protect for telemetry and auditing purposes. However, because we have other DLP products and antivirus in our organization, we have slowly and gradually started using a few more features of Jamf Protect, including DLP, which has made the process much smoother. The earlier process of DLP was quite complex in our environment, but since we started using Jamf Protect, it has become much easier for us to use those features that were very complex before. The first example I can give you is using a third-party USB. Previously, whitelisting the USB in our environment was a significant challenge because we are a large organization with approximately 10,000 Macs. Every now and then, people come to us saying they need a specific USB to work for a client. Since we started using Jamf Protect, that has become quite easy for us to handle. There are other compliance features that we are trying to use. I have just completed my certification with Jamf Protect, so we are trying to implement some compliance features using Jamf Protect. However, as of now, we are using very limited features of Jamf Protect..”

anonymous1

[Read full review](#) 

Endpoint Engineer Manager at a tech vendor with 10,001+ employees

“My primary use case for Jamf Protect is endpoint detection and response and threat monitoring for macOS devices. I use it to gain visibility into endpoint activity, detect malicious behavior, monitor security events, and investigate potential threats. It also helps me to enforce security policy, identify risky applications or processes, and support incident response activity. Additionally, I use Jamf Protect alongside my broader security stack to improve overall security posture and maintain compliance requirements across my macOS fleet.

“A recent example of how I use Jamf Protect in my day-to-day work was during the investigation of a suspicious process execution on several managed MacBooks. Jamf Protect generated an alert for an unsigned application attempting to execute and establish outbound network connections. Using the telemetry and process visibility provided by Jamf Protect, I quickly identified the affected devices, reviewed the process tree, and determined the activity originated from unauthorized software installed by the user. I used the alert data to validate the threat, isolate the impacted endpoints through my security workflow, remove the application, and update my security policy to prevent similar installation in the future. Jamf Protect played a key role by providing real-time visibility into endpoint activity and reducing the time required to investigate and respond to the incident. On a day-to-day basis, I also use Jamf Protect to monitor security alerts, review endpoint behavior, validate compliance with security policy, and investigate any anomalous activity detected on macOS devices.

“In addition to threat detection and incident investigation, I use Jamf Protect for security posture monitoring and compliance support across the macOS environment. It helps me identify potential risky behavior, monitor application activity, detect outdated software, and ensure endpoints comply with internal security standards..”

Chetan Chawla

Lead Product Security Architect at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“With Jamf Protect it is easy to manage, so fewer employees are needed, with just one administrator managing the whole product, and it is easy to deploy and manage..”

Ahtisham Mirza

[Read full review](#) 

Senior System Administrator at a computer software company with 11-50 employees

“A specific example of how we use Jamf Protect for VPN access is that my organization uses it to secure the MacBook devices that have been provided to us. When we were signing up for this, we received our laptop devices and with the initial setup, Jamf Protect was configured to avoid breaching any sensitive information..”

Verified user

[Read full review](#) 

Software Engineer at a tech vendor with 501-1,000 employees

“Jamf Protect is deployed in my organization as a SaaS-based portal.

“I would describe the ease of integration of Jamf Protect with our existing IT infrastructure as very easy, since Jamf Protect integration with Jamf is very natively supported..”

Verified user

[Read full review](#) 

Systems & Cloud Architect at a computer software company with 11-50 employees

“It is easy to implement and easy to manage.

“It was very easy to implement by following Jamf's documentation, and our security team is very happy with how it monitors threats..”

Nick Rudman

[Read full review](#) 

Project Manager at Wells Fargo

“The product's initial setup phase has very simple steps. If you have Jamf Pro in your environment, you don't have to do any migration. If you buy Jamf Protect separately, it can be installed very quickly and doesn't take much time.

The solution can be deployed if you are using Jamf Pro. I don't think that you need something else apart from Jamf Pro to deploy Jamf Protect..”

Amit-Sarkar

Apple Mobility Service Manager at ZONES PVT LTD

[Read full review](#) 

“I would rate my experience with the initial setup a ten out of ten, with ten being easy.

Initially, the deployment took 15 days for the pilot phase, and then another 15 days for production. However, the actual deployment itself only took 15 days, as it was preconfigured.

So it took around one month in total. Stakeholder approval caused a delay, but the actual deployment for the facility department was only 15 days.

No maintenance is required because everything is associated. It's a cloud solution, so we only need to modify applications for the services.

So, 99.9% of the time, it's working fine..”

Dinesh Venkates

Consultant at Fujitsu

Customer Service and Support

“I would rate their technical support as a 9 because I am actually working with a reseller in South Africa who is amazing and helps me a lot. My experience with direct technical support is good as far as sending a support ticket, but online support is not always available..”

Amira Youssef

Server Administrator Coordinator at Cairo American College

[Read full review](#) 

“The technical support is good and proactive. That said, it can be improved. There is some scope to enhance the response and resolution time. From an Indian perspective, I would rate their support at seven point five out of ten..”

Verified user

Presales Engineer at a computer software company with 201-500 employees

[Read full review](#) 

“The solution's technical team has to be a bit aggressive from a support perspective. The solution's technical team needs to pay keen attention to the support part..”

Amit-Sarkar

Apple Mobility Service Manager at ZONES PVT LTD

[Read full review](#) 

“The customer support for Jamf Protect is pretty good. As I mentioned before, we are relying on the reseller, and they are great, but my only concern with the direct support is that it is only by email or support tickets, and it might take some time to be resolved. In emergencies, it is hard to wait for this time..”

Amira Youssef

Server Administrator Coordinator at Cairo American College

[Read full review](#) 

“They're the best support team I've encountered after Dell. We used to say we had the best support from another company, but now I have to say Jamf takes the cake. They have 24/7 support and resolve issues within that timeframe.

Most of the support people are from Europe, but somehow they manage to work 24/7 for us. They pick up the ticket and call you within one or one and a half hours..”

Hitesh Sharema1

IT Compliance Project Specialist at Avizva

[Read full review](#) 

“In my experience, Jamf Protect's customer support has been very positive overall. The support team is knowledgeable, responsive, and generally able to resolve issues in a timely manner. When I have opened support cases, I have typically received clear guidance and useful troubleshooting steps. I also appreciate that support engineers have strong knowledge of both macOS and the Jamf ecosystem, which helps me deal with more complex deployment and security-related questions..”

Chetan Chawla

Lead Product Security Architect at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

Other Advice

“My advice to others looking into using Jamf Protect is that it is an easy application to deploy and easy to manage. We are all satisfied with Jamf Protect. I would rate this review a 10..”

Ahtisham Mirza

Senior System Administrator at a computer software company with 11-50 employees

[Read full review](#) 

“The implementation took just one month, and then we started getting information and taking more actions from that information, which was completely missed, so it was quite an addition to our security layer at school.

“I purchased Jamf Protect directly from the reseller called Onsite.

“I would rate this product overall as a 9..”

Amira Youssef

Server Administrator Coordinator at Cairo American College

[Read full review](#) 

“Based on my experience, the accuracy and reliability of Jamf Protect detection are very good. The platform produces actionable alerts with sufficient context, and I have found that the majority of high-severity detections are relevant and worthy of investigation.

“Jamf Protect's AI-related governance and security capabilities are solid, particularly how the platform approaches threat detection and behavior analytics.

I appreciate that the platform provides transparency into the events and indicators that trigger alerts, which helps my security team validate findings and maintain confidence in the detection process. From a governance perspective, the centralized visibility, auditability, and reporting capabilities support security oversight and compliance requirements. The platform allows organizations to monitor endpoint activity consistently and maintain accountability for security events.

“My advice would be to clearly define your security objectives and understand how Jamf Protect fits into your broader security strategy before deployment. The platform provides a lot of valuable telemetry and detection capabilities, so it is important to spend time tuning policies, alerts, and integration to align with your organization's risk profile. I would also recommend integrating Jamf Protect with your SIEM and incident response workflows from the beginning. Doing so allows you maximum visibility, correlates endpoint data with other security sources, and gets more value from the platform. I would rate this product an 8 out of 10..”

Chetan Chawla

Lead Product Security Architect at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

“I think it would be great if we get the alert to the user as well. I think it is added recently to the self-service so that users can get notification that there was malware active on their device and Jamf Protect took the necessary actions to block this malware.

“From the client side, if they got alerted as well about the specific cause of the malware or viruses with Jamf Protect, that would be great so users are educated about how to use the tools and make sure that they are safe while they are using their devices.

“If your fleet consists completely of Apple devices, Jamf Protect is the best solution for you.

“Applying this security, privacy, and compliance on the devices with Jamf Protect is very crucial for us because we do not want any security holes, which is very important for our organization.

“We are using Jamf Cloud services for Jamf Protect, but I am not sure which one they are relying on.

“I would rate this product an 8 out of 10..”

Amira Youssef

Server Administrator Coordinator at Cairo American College

[Read full review](#) 

“A quick, specific example of how I use Jamf Protect in my environment is when a user downloads a fake update, Jamf Protect blocks the execution, and I receive an alert from Jamf Protect about the user device. Jamf Protect puts the user device in quarantine, and after that, the automated policy triggers. We can isolate the network and prompt the user to go to Jamf Self Service, and it runs the remediation script.

“A specific example of metrics related to risk reduction or operational speed is that

we have achieved about 80% reduction in remediation time. Before putting an automated system in place, the security alert usually meant a multi-step manual fire drill. As admins, we would get a ticket, locate the user, remote into their machine, locate the malicious files or launch the scripts, delete them, and check the system logs. This manual triage easily drains multiple hours of our time for one incident.

“Regarding Jamf Protect's AI capabilities, I find its governance and security to be slightly trustworthy because the company treats that as an enterprise architecture challenge rather than simply adding a trendy chatbot to their dashboard. Jamf Protect approaches AI from two distinct angles, both handled with a strict and compliance-first mindset.

“When I evaluate the accuracy and reliability of Jamf Protect's AI capabilities, specifically looking at how well it catches threats versus its false positive rate, it is useful to separate that into the main analytical engines: the zero-day network threat engine and the behavioral analytics engine. They score high on accuracy and reliability by threat detection, high accuracy via RAG and the machine learning feature, and the false positives are exceptionally low because it is a native framework advantage.

“My advice for others looking into using Jamf Protect is that if they have a lot of Mac devices, they must use Jamf Protect. I give this review a rating of 10 out of 10..”

Yousef Almomani

Systems Engineer at a consultancy with 51-200 employees

[Read full review](#) 

“The features I would add to Jamf Protect include scanning, endpoint security, real-time behavioral threat detection, and seamless sync with [Jamf Pro](#) for device management.

“Regarding the accuracy and reliability of output from Jamf Protect's AI

capabilities, I find it good.

“The user interface and user experience of Jamf Protect are great. It is simple and has everything you need. Sometimes you have to navigate through multiple menus, but it is acceptable as long as you find the right information.

“Jamf Protect handles updates and maintenance seamlessly.

“Jamf Protect helps us meet compliance requirements because you can set up policies and procedures in Jamf portal. You can apply configuration profiles, and using Jamf Protect, you can protect yourself effectively.

“Jamf Protect supports remote work and distributed teams because it is mainly used for security, such as malware detection and policy violation monitoring across the Apple fleet, which secures the remote workforce.

“Jamf Protect has impacted our incident response times positively, making it faster. The response and detection is faster when you have something which is natively supported compared to other antivirus solutions.

“Regarding cost and value, we have used other solutions, but we normally use Jamf Protect with [Jamf Pro](#) product, so it is bundled. The price is different, and as it is a native product of Jamf, it has better integration, better response, and better threat analysis. This is why we always prefer that combination.

“My advice to others looking into using Jamf Protect is that it is best suited for organizations already using Jamf Pro. If you are using Jamf Pro, the combined Pro plus Protect stack is extremely powerful. However, if you have a mixed environment with both Windows and Mac devices, you should consider pairing Jamf Protect with CrowdStrike or another Windows coverage solution alongside Jamf for Apple devices, so you can match your needs appropriately.

“I would rate this product eight out of ten..”
