Seemplicity

Seemplicity Recap

Seemplicity is a comprehensive platform designed to streamline workflow and consolidate security alerts, making it indispensable for security teams seeking efficiency and clarity.

Seemplicity enhances security operations by providing an all-in-one platform for managing alerts and incidents. It consolidates data from multiple sources, offering users a single dashboard to view, manage, and resolve security issues effectively. With its automation capabilities, it reduces manual interventions, accelerates response times, and keeps teams focused on high-priority tasks. Seemplicity's design ensures ease of integration and adaptability to various environments, fostering seamless security management.

What are Seemplicity's essential features?

- **Centralized Dashboard:** Offers a unified view of security alerts, enhancing visibility.
- **Automation:** Streamlines repetitive tasks, freeing up resources.
- **Real-time Updates:** Ensures timely information for proactive decision-making.
- **Integration Capabilities:** Easily integrates with existing tools for a cohesive workflow.

What benefits should be considered when evaluating Seemplicity?

- **Increased Efficiency:** Automation reduces manual workload, speeding up response times.
- **Improved Accuracy:** Minimizes human error by automating alert management.
- **Cost Savings:** Reduces operational costs through streamlined processes.
- **Enhanced Security Posture:** Provides comprehensive insights to strengthen security measures.

Seemplicity is widely implemented in industries like finance and healthcare, where streamlined security management is crucial. It aids in maintaining regulatory compliance and swift threat resolution, ensuring operations run smoothly and securely. Organizations benefit from its flexibility and scalability, adapting to their specific security needs.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

“I was also able to pay for the tool twice over by using it for tool rationalization.”

John Lodini

Vice President Of Security Architecture And Engineering at a hospitality company with 10,001+ employees

“Seemplicity is doing amazing work, and organizations were able to better meet their SLAs, better communicate to their leadership and executive level about the overall risk and exposure levels, and overall have a better understanding of what they are dealing with.”

Ami Hofman

Managing Director at Cutting Edge Security Services

“When we started with Seemplicity, we saw an 85% reduction in the number of tickets through deduplication, and that is significant for our teams who are swamped with issues.”

Yaron Blachman

Member And Investor at OpenWeb

- ✓ “Seemplicity really shines on that remediation component and being able to automate that workflow, and that's a gap where we could not find one of our existing technology partners to be able to fill that void.”

Verified user

Managing Director at a consultancy with 1-10 employees

- ✓ “The biggest impact Seemplicity has had on my organization is turning what used to be a fragmented, manual process into something structured and accountable.”

Iliyas Mohamed

Senior Manager For Info Sec at X-Press Feeders

- ✓ “Seemplicity is helping us generate immense ROI in terms of helping secure our infrastructure, applications, endpoints, and understanding vulnerabilities that we really did not have a good process of understanding before.”

Verified user

Managing Director

- ✓ “I think of Seemplicity as a fantastic company and a fantastic partner to work with.”

Antonio Russu

Global Head, Cyber Security at Edge Testing Solutions

What users had to say about valuable features:

“The interesting challenge that is solved with Seemplicity is aggregating the detections and then showcasing it according to our requirement based on our prioritization framework.

The best features Seemplicity offers include the aggregation logic, the way it is simplified to view and access, and the ability to have a view in a simpler way.

The aggregation logic in Seemplicity stands out for me because it made the features simpler for the team and the aggregation logic and other features are something useful for us in speeding up the things for the mitigation activities.

Seemplicity has positively impacted our organization, as we are still in the phase of production for all the zones, so we don't have feedback yet, but for now, it's all good..”

Sripriya Vutty

Cybersecurity specialist at a manufacturing company with 10,001+ employees

[Read full review](#) 

“The best features that Seemplicity offers include the risk finding, rule setting, and the analytics in the dashboard, where we can identify all types of vulnerabilities.

Out of those features, I find myself using the analytics in the dashboard most often because in some cases, I need to investigate the findings, while the second one is the rule setting based on the team request.

Seemplicity has a huge positive impact on our organization because once we have a vulnerability, it acts as a great assistant with its auto-mitigate feature, which can be used for a variety of different types of vulnerabilities, supporting our cybersecurity analysis.

The positive outcomes from using Seemplicity include saving our human effort, and while I cannot calculate the exact hours, it usually saves over five hours per employee, and our security posture is always up-to-date with the standard framework based on all of the vulnerability findings..”

Kate Park

applicator security architect at a financial services firm with 10,001+ employees

[Read full review](#) 

“The best features Seemplicity offers are phenomenal aggregation that reduces the total count of vulnerabilities down by a huge amount, and SEMA, the AI, is very good as well. When it comes to aggregation reducing the total count of vulnerabilities, SEMA stands out to me for its ability to troubleshoot issues directly within the platform while allowing the AI to also query things internally, providing good and accurate responses without having to use guides or third-party solutions. Depending on how it's set up with the customer and their goals, you can reduce total counts from hundreds into under ten tickets that need to be raised very quickly.

“Seemplicity has a great library of integrations. Seemplicity's AI capabilities tick all the boxes of what we need it to do in terms of governance and security. In terms of accuracy and reliability of output, I have mainly used Seemplicity for troubleshooting and querying if things are possible within the platform, and it has given good outputs that have worked, so I have no issues with it..”

Verified user

Senior Security Engineer at Resillion

[Read full review](#) 

“The best features Seemplicity offers are the data integrations, the ability to redefine rules, the custom rules to categorize or prioritize findings, and the remediation workflows that can pass the findings to the right folks.

“The custom rules feature in Seemplicity helps us prioritize findings and makes my job easier by allowing us to recategorize security findings to meet our environment-specific or deployment-specific risks, ensuring that of the 100 issues found, maybe only one or even less needs action, which helps prevent being overwhelmed by alerts.

“Seemplicity provides a variety of integrations covering most of the well-known security tools, so all the data can be easily aggregated.

“Seemplicity has positively impacted my organization by helping to reduce the meantime to resolution of security issues by categorizing the right risks, ensuring the highest risk ones are addressed first and routed to the correct team, thus avoiding delays during assignment.

“Seemplicity has contributed to my organization's readiness for regulatory audits by helping in vulnerability management SLA tracking, although we are not using it specifically for regulatory requirements..”

Verified user

[Read full review](#) 

Product Security at a manufacturing company with 201-500 employees

“Seemplicity's best feature is probably the automation and the ability to automate a lot of the workflow for prioritizing and remediating that patching, that identifying of the exposures, being able to make sure that any sort of fixes that need to be made in the environment are done as rapidly as possible. The ability to not only prioritize but automate the workflow is extremely powerful, and to do it with a lens of AI, using some AI technologies to make that workflow even faster.

The automation and AI help both our technical teams as well as our customer's technical teams execute with speed. I think the biggest challenge has been teams always don't have enough time or resourcing to prioritize properly and what Seemplicity does in working with the DataSec team and working with our clients is execute the fixes with speed and accuracy as well as understand the stacking or the ranking order of what needs to be fixed in a swift manner and in the fastest possible way.

Seemplicity has become an important partner to us from a technology perspective as we work with best implement best practices based on not only industry standards but provide sort of comprehensive security solutions that are informed and guided by our own knowledge and expertise. It's been instrumental technology in our overall ecosystem of endpoint technologies and other technologies. We're definitely delivering more to our customers that demand sort of the best options for cybersecurity.

It's difficult to quantify some of it, but in some areas, we've seen customers, one financial customer experience 20 to 30% reduction in the amount of manual fixing and remediating. We also saw another customer of ours achieve an extremely high rate of optimization by reducing the number of untouched findings from numbers in the millions down to thousands. Definitely reducing the workflow, and then there's also a time component where we've heard anecdotally about speeding the time to fix. Those security teams within our customers are feeling a much more secure posture at the end of the day.

Seemplicity's AI capabilities meet the needs today in terms of what customers expect to have. There hasn't been anything that's been a gap. I know there's lots

of concerns with our customer environments and with even our own technical teams about the use of AI and how AI will either create risk or not create risk or create help within the environment. It's meeting those needs by providing a tangible outcome..”

Verified user

Managing Director at a consultancy with 1-10 employees

[Read full review](#) 

“The best features that Seemplicity offers, from a tool perspective, are clarity, simplicity, and the capability of ranking information according to the urgency level that the client sets up. It adopts very quickly new types of challenges that the industry presents, such as the Mithos situation and the code review that they were able to do. A lot of these types of elements surprise clients and allow us to be one step ahead of the competition.

“To tell you more about how the clarity and urgency ranking have impacted my clients, in an operational environment, there are also emotions. People react in relation to something as an overwhelming event. The capability of ranking, listing, and prioritizing based on data and fact changes perspective on something that might have been emotionally draining or demanding. Clients are able today to look into a specific environment, look into the ranking of urgency, apply the remediation that is required, clean the cluttering available in that area, and then focus on the next emergency without having to look back if something was forgotten. That level of simplicity, clarity, and transparency creates a better sense of control and professionalism when actually deploying or reporting about operational performances.

“One of the key features is actually not directly related to the software but is actually the people that develop the software. Thanks to Seemplicity management, we access the people that are behind all the level of information required to not only use the tool but to explain the feature and then present them to the client in a form and shape that the client recognizes. Once this is implemented, it makes a massive difference for the client to feel comfortable about using the tool.

“When I present my organization to a client, the culture of the company, the vision of the company, and our engagement to what the client is looking for, suddenly bringing a third party into the equation, I never know how the third party will be able to integrate into the previous picture. Seemplicity embraces our culture and commitment to the clients. When we go to clients together, there is never a question of what they will say or how they will be accepted. They become part of the Resilient team, and therefore, when presenting to the client, there are not two companies around the table; there is one—Resilient—making Resilient stronger when meeting with clients about solutions such as Seemplicity.

“As for specific outcomes or metrics that show how Seemplicity has made our organization stronger or more effective, all of the above applies. Clients became very satisfied, not only by the fact that they were in control, but they were actually surprised about a number of activities that were duplicated across different environments. With Seemplicity, that duplication was immediately spotted, actions were taken to remove the duplication, and therefore the client was able to limit the amount of cluttering in front of them and start addressing the real challenges behind the whole thing..”

Antonio Russu

Global Head, Cyber Security at Edge Testing Solutions

[Read full review](#) 

Other Solutions Considered

“The vulnerability team was using a solution called Nucleus and they switched because it could not handle the scale that they were beginning to get and also really struggled with code-to-cloud use cases..”

Verified user

Data Lead at a financial services firm with 10,001+ employees

[Read full review](#) 

“Before choosing Seemplicity, I did not evaluate other options; in fact, Seemplicity happened to be the one that was love at first sight. It really clicked from a cultural, business understanding, product, and ambitions of growth perspective. I started together very quickly and deployed..”

Antonio Russu

Global Head, Cyber Security at Edge Testing Solutions

[Read full review](#) 

“This was not a one-for-one replacement. We had scanning engines and various different sources of telemetry. We were either in-house built, using Excel sheets, or native modules for VM scanners that offer some aggregation. However, we did not have anything to the extent of a single aggregator that takes feed from everything, gives us visibility and context across the board, and integrates with the back end. I see this as the next evolution in exposure management, and this tier of business logic in between is served well by Seemplicity..”

Ami-Hofman

Managing Director at Cutting Edge Security Services

[Read full review](#) 

“We didn't necessarily use a previous solution, but we evaluated other solutions from the likes of Armis and CrowdStrike and multiple other ticketing technologies that didn't really provide the full end-to-end management component and response or remediation side. Seemplicity really shines on that remediation component and being able to automate that workflow, and that's a gap where we could not find one of our existing technology partners to be able to fill that void..”

Verified user

Managing Director at a consultancy with 1-10 employees

[Read full review](#) 

“We evaluated other options from the likes of Armis, CrowdStrike, Wiz, and Nucleus. There were some other folks that were in that equation, but again, most of them could not provide a full comprehensive view of both exposure management and exposure remediation. Seemplicity really shines more on that automated remediation workflow, which seemed to be a gap with some of the other existing technologies that we have in our ecosystem as well as those that we've evaluated..”

Verified user

[Read full review](#) 

Managing Director at a consultancy with 1-10 employees

“We did evaluate other options. On one hand there were solutions such as ServiceNow with the specific modules applicable here, and on the other hand there were enhancements of VM engines such as Rapid7, Tenable, and Qualys. They all offer some level of aggregation and reporting that can help. We explored developing certain capabilities in-house through various automation tools, from using things such as Ansible to various different coding we have implemented before. The conclusion was it is not scalable, it is not reputable, and it is too costly. We lost skills over the years, and investing in one platform that covers so much ground was the right decision for us..”

Ami-Hofman

[Read full review](#) 

Managing Director at Cutting Edge Security Services

ROI

Real user quotes about their ROI:

“Seemplicity has helped us see a return on investment by reducing the need for an L1 analyst for AppSec findings through its categorization, deduplication, and automatic remediation assignments, which has significantly decreased the headcount required for initial analysis..”

Verified user

[Read full review](#) 

Product Security at a manufacturing company with 201-500 employees

“Concerning return on investment, I cannot share specific details due to confidentiality agreements I have, but I can say that the major impact was on increasing our footprint within a strategic client, having the capability to present solutions within a certain price range, and therefore allowing us to compete against competitors..”

Antonio Russu

[Read full review](#) 

Global Head, Cyber Security at Edge Testing Solutions

“The simple answer is yes. In my view, this is one of the areas, and in my experience, it is important to look for friction and pain. Seemplicity is certainly associated with a few areas where there is obvious friction and obvious pain, and as such, it was fairly easy to demonstrate value for money. Some of the recent focus areas such as remediation is obviously a slow move that requires a lot of education and multiple touch points. However, we certainly had multiple opportunities to demonstrate value for money and a good return on investment..”

Ami-Hofman

Managing Director at Cutting Edge Security Services

[Read full review](#) 

“The use has definitely created fewer employees needed. It's not so much fewer employees needed, but less need to go out and have to hire more expensive employees. Customers are coming back and saying that, including one large brokerage company that came back and said they've saved a lot of time and money from doing that. It's a bit hard to quantify, but in terms of time saved, there is absolutely time saved, fewer resources and people needed, and in terms of more visibility into the risk and exposure across the environment, whether it's in applications, whether it's in runtime environments, or whether it's in cloud environments, there's definitely a return..”

Verified user

Managing Director at a consultancy with 1-10 employees

[Read full review](#) 

“I have seen a return on investment because the time to actually do the assignment of a task is much less. The number of employees that would have had to look at a particular set of errors from different tools or vulnerabilities has decreased dramatically. I had seven different tools that sometimes produced the same message. Because one employee can do a lot more vulnerabilities, it is a lot better from a timing perspective on how many people I would need to do the work. I was also able to pay for the tool twice over by using it for tool rationalization. I was able to cut the amount of licensing from other tools to make up for what the cost of Seemplicity was times two..”

JohnLodini[Read full review](#) 

Vice President Of Security Architecture And Engineering at a hospitality company with 10,001+ employees

“While it is definitely difficult to quantify the actual ROI, I can estimate that Seemplicity is saving us at least half the time that we would spend before trying to manually triage and identify where fixes need to happen across our entire infrastructure, whether it is cloud, whether it is applications, whether it is endpoints. Seemplicity is definitely saving time, and it is obviously saving money that we would have had to spend if we would have either hired more personnel to fix the vulnerabilities or to help manually go into these systems, determine whether or not it needs a fix or not, and then take action. There is definitely value there.

In regard to return on investment, I can say that Seemplicity definitely multiplies the personnel and the amount of personnel we have. We are not a big organization, and we do not have a ton of IT security staff. Seemplicity sort of multiplies maybe 4x what we would have to spend in terms of employee hiring or actual analysts to be able to triage and remediate these vulnerabilities. There is definitely ROI there..”

Verified user[Read full review](#) 

Managing Director

Use Case

“My main use case for Seemplicity is unified vulnerability management. I use Seemplicity for unified vulnerability management by aggregating the detections from various sources which we use for performing the scans, and this provides a view for our stakeholders and for the mitigation team as well to cut the tickets and work on the process..”

Sripriya Vutty

Cybersecurity specialist at a manufacturing company with 10,001+ employees

[Read full review](#) 

“My main use case for Seemplicity is providing vulnerability data to customers via tools like Qualys. Seemplicity helps us run vulnerability data to customers by allowing us to filter all of the data from Qualys directly into the customer's ITSM platforms, enabling them to manage their remediations..”

Verified user

Senior Security Engineer at Resillion

[Read full review](#) 

“For us, the main use case for Seemplicity is to get vulnerability findings in order to remediate the issue, and then some of our teams need to automatically check the vulnerability based on our automation setting.

Whenever we find or identify new findings in Seemplicity, we set up the vulnerability rule on our end, which identifies what the previous rule setting was, and the auto-fix is based on what we configured and what we want to mitigate, using this automation setting for these vulnerabilities..”

Kate Park

applicator security architect at a financial services firm with 10,001+ employees

[Read full review](#) 

“My main use case for Seemplicity is aggregating all the security findings across the application security from SAST, secrets finding, vulnerability scanning, or cloud CSPM finding, and deduping them, as well as using rules to categorize based on the risk according to our custom policies, and then using the remediation workflow to assign it to the right folks and track those Jiras, making sure SLAs are mandated.

“In my day-to-day work, I use Seemplicity to track each product's vulnerabilities, such as upstream vulnerabilities discovered. As they are discovered, they are scanned by one of the tools, and then that finding is passed on to Seemplicity to evaluate the true risk of that finding. Once that is done, if it's not something that we need to work on, Seemplicity's rule set autonomously identifies whether the issue needs action or not, and if it does, it gets routed to the right team to ensure it does not get dropped and we minimize the response time from security risk to remediation..”

Verified user

[Read full review](#) 

Product Security at a manufacturing company with 201-500 employees

“Our main use case for Seemplicity is that we work with a number of large financial institutions as well as large enterprises, predominantly on the West Coast of the United States, and we use their exposure management and response platform to service our customers. We help them by integrating the technology into their environments, making sure that they're identifying and prioritizing vulnerabilities and exposures that need to be remedied or remediated as quickly as possible.

For example, we work with a large technology firm as well as one of the largest financial brokerage firms where we take the technology to go into their environment and identify the millions of findings and vulnerability findings that they have, and then use the technology to identify which of those millions of findings need to be addressed and prioritized for patching or fixing or remediating any sort of problem. Our technical team uses Seemplicity to work with the customer's technical team to identify those vulnerabilities and exposures, and then apply in an automated fashion the right fixing that they otherwise would not have the time to do or the means to remediate in a very quick manner.

We also use Seemplicity for reporting and dashboarding on their exposure risk and how many exposures they have and are currently servicing at any given moment, by integrating through their ticketing systems..”

Verified user

[Read full review](#) 

Managing Director at a consultancy with 1-10 employees

“My main use case for Seemplicity is that it offers a single pane of glass or SPoG, and I use them as a trusted supplier to provide it to my clients. Not only can we make use of the features and the quality of the product, they white-label it in order for me to present it to my clients and give them a unique Resilient experience.

“A quick specific example of how I have used Seemplicity in this way for one of my clients is that we meet with clients who have a certain level of complexity being corporates where multiple data sources are used in order to run their operations. These data sources are not all in the same location, being a physical building, but they can be distributed across different countries. SPoG allows us to centralize all these different data sources on one single dashboard. That dashboard is not just a passive overview of the data sources; it actually helps to rank the different types of information, create a ticketing system, and have an urgency ranking system, and therefore allows our clients to be on top of everything operational that is happening in order to find solutions and keep operations running smoothly.

“Regarding my main use case or how my clients benefit from it, clients learn more about their own operations when working with Seemplicity. The value that Seemplicity gives is not just to give us access to the product, but actually we can use and leverage their knowledge and their product experts, developers, and commercial and marketing managers join us when engaging with the clients in order to share deeper levels of knowledge and information about the tools, the features, and the benefits. We take the clients on a journey that actually helps them to learn more about their own operations and how they can discover ways to improve the day-to-day challenges that they have..”

Antonio Russu

Global Head, Cyber Security at Edge Testing Solutions

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“My experience with pricing, setup cost, and licensing is that pricing and setup costs were not in my area. The setup itself was reasonably smooth. Licensing is also not my area, as I am more of the technical, hands-on person..”

Verified user

Senior Security Engineer at Resillion

[Read full review](#) 

“Seemplicity has helped improve our risk exposure by helping us identify those vulnerable points across the applications, the cloud, and even the endpoint devices. It is absolutely helping improve our risk exposure..”

Verified user

Managing Director

[Read full review](#) 

“My experience with pricing, setup cost, and licensing was that I first purchased for one year, as I always do, just to make sure that the tool has value, and then I purchased for three years after that. The pricing did not increase dramatically from year to year because I maintained a similar number of data sources and similar integrations..”

JohnLodini

[Read full review](#) 

Vice President Of Security Architecture And Engineering at a hospitality company with 10,001+ employees

“On the integration side of Seemplicity, it has been seamless connecting it with our existing tools. We are not ripping out anything we already rely on; it just sits on top of these tools and pulls everything into one place. That vendor-agnostic approach matters a lot to us since we did not want to be locked into a scanner ecosystem, especially with a group as spread out as ours across multiple entities..”

Iliyas Mohamed

[Read full review](#) 

Senior Manager For Info Sec at X-Press Feeders

“Seemplicity has been very smart regarding pricing, setup cost, and licensing. They did not come to us with a take-it-or-leave-it price; they sat down with us, we presented our business case, and we discussed our physical presence and needs in specific geographies. They opened a conversation about how to help us build and grow the market, and now we are looking into the next generation of how to expand. From a pricing perspective, they have shown maximum flexibility..”

Antonio Russu

Global Head, Cyber Security at Edge Testing Solutions

[Read full review](#) 

Customer Service and Support

“Every time I ring or drop an email, there is immediately someone picking up or getting us an answer. I rate the customer support a 10 on a scale of 1 to 10..”

Antonio Russu

Global Head, Cyber Security at Edge Testing Solutions

[Read full review](#) 

“The customer support has been phenomenal, with Alon getting responses as quickly as possible, solving issues, and getting on calls if we need them for priority issues. I rate the customer support a nine on a scale of one to ten..”

Verified user

Senior Security Engineer at Resillion

[Read full review](#) 

“Seemplicity's customer support has been excellent. I had a TAM, so it was never an issue for me. I have never had to actually open a ticket myself, neither has anyone on my team. I called my account manager and they handled it for me. I would rate the customer support a 15 on a scale of 1 to 10..”

JohnLodini

Vice President Of Security Architecture And Engineering at a hospitality company with 10,001+ employees

[Read full review](#) 

“I want to mention that over the last few years, we had an open communication channel with Seemplicity team. We had the ability to provide feedback and request for new features, and the team overall was quite accommodating. Most of the things we have been asking for have already been implemented, and the team has been quite aligned with market demand and where the market is going, so all very positive..”

Ami-Hofman

Managing Director at Cutting Edge Security Services

[Read full review](#) 

“Customer support for Seemplicity is pretty good with weekly calls and regular support for any change requests that are prioritized immediately.

“I would rate the customer support a perfect 10 because they have consistently taken care of all requests from day one post-deployment..”

Verified user

Product Security at a manufacturing company with 201-500 employees

[Read full review](#) 

“Customer support has been first-class. They are very attentive. We've had face-to-face meetings even with our customers and with our technical teams, as well as myself, and they are whenever a concern is brought up, very attentive and very responsive. I would say it's a first-class customer experience.

The Seemplicity team is very accommodating and responsive to specific needs that our customers have and how that works with the rest of our technology stack. Pricing is very much competitive and in line. Of course, customers always demand a lower price, but setup costs and pricing overall are very much in line for the value that the technology provides..”

Other Advice

“My advice to others looking into using Seemplicity is that it is highly recommended. Regarding Seemplicity's AI capabilities in terms of governance and security, I think it's all good. Regarding Seemplicity's AI capabilities, I think its accuracy and reliability of output are good for now. .”

Sripriya Vutty

Cybersecurity specialist at a manufacturing company with 10,001+ employees

[Read full review](#) 

“My advice to others looking into using Seemplicity is to be aware that you will get more information from support than from the documents themselves, and it can take a bit of time after feeding in data to show meaningful results. However, it does show meaningful results in the end. I rate Seemplicity a seven on a scale of one to ten..”

Verified user

Senior Security Engineer at Resillion

[Read full review](#) 

“My advice to others looking into using Seemplicity is to give it a try if they have a large application security backlog, as it can definitely assist in the first level triage, prioritization, and help the security team shift left and move tasks to the corresponding owners easily.

“I have not used Seemplicity's AI capabilities much other than summarizing issues and some of the aggregated findings, and the governance of that is well within the

boundary with no issues observed.

“In my usage, Seemplicity's AI accuracy is pretty good. It captures the critical and high issues needing attention effectively when summarizing a large number of issues into one aggregated issue.

“I give this review an overall rating of 9 out of 10..”

Verified user

Product Security at a manufacturing company with 201-500 employees

[Read full review](#) 

“The automation and AI help both our technical teams as well as our customer's technical teams execute with speed. I think the biggest challenge has been teams always don't have enough time or resourcing to prioritize properly and what Seemplicity does in working with the DataSec team and working with our clients is execute the fixes with speed and accuracy as well as understand the stacking or the ranking order of what needs to be fixed in a swift manner and in the fastest possible way.

I would give them a nine on customer support.

I would give advice to know the specific pain and outcome you're looking to achieve when it comes to vulnerabilities or patching and to really understand what was missing from either existing technologies or even trying to use AI to build it yourself. Once you have an understanding of where those challenges were, the value proposition of Seemplicity will be much clearer for any organization looking to implement this type of exposure management technology.

I have given this review an overall rating of ten..”

Verified user

Managing Director at a consultancy with 1-10 employees

[Read full review](#) 

“Seemplicity contributes significantly to our organization's readiness for regulatory audits because most of our InfoSec team uses it when investigating vulnerabilities.

I would rate Seemplicity an eight out of ten. I choose eight out of ten because overall, Seemplicity is a great tool, but it sometimes has a sync issue between other applications and itself, such as Twist or some other inventory data or sources of data, indicating a need for improved functionality for synchronizing data.

While I do not quite use Seemplicity's AI capabilities a lot, I was recently informed about them and have utilized the AI for problem-solving by chatting with it to get an immediate solution or instant message, which proves to be useful.

I cannot measure the accuracy of Seemplicity's AI, but I think its reliability is around eighty percent, as I feel a bit doubtful about the accuracy since my usage has mainly been through the chat feature.

My advice for others looking into using Seemplicity is that it would be beneficial since you can clearly see the vulnerability findings. My review rating for Seemplicity is eight out of ten..”

Kate Park

applicator security architect at a financial services firm with 10,001+ employees

[Read full review](#) 

“The advice I would give to others looking into using Seemplicity is to be very open and very transparent because every time you present a clear business case, they will put heart and soul into trying to give you the best answer, and you will receive a lot of flexibility in options whenever you are not sure about how to proceed. They have a lot of experience in a number of industries and geographies that I can leverage from, and that always helps me to make the right decision at the right time.

“Regarding Seemplicity's AI capabilities, I am quite impressed by the way that CEO Yoran has set up his organization to adopt AI, put the right checks and balances in place, and the governance that is using internal and external supervision and involves us as one of their trusted partners whenever questions or suggestions need to be put on the table.

“In terms of Seemplicity's AI capabilities, I have found its accuracy and reliability of output to be top of the ranks. Everything that they said they were going to do has happened. Every time we had a question, there was an answer, so I am quite impressed by their current position.

“Seemplicity is deployed in my organization through a public cloud and on-premise because of the profile of our clients. I think of Seemplicity as a fantastic company and a fantastic partner to work with. I would rate my overall experience with Seemplicity a 10 on a scale of 1 to 10..”

Antonio Russu

Global Head, Cyber Security at Edge Testing Solutions
