Product Recap

 Sprinto

Sprinto Recap

Sprinto is a leading compliance automation platform designed to help businesses effortlessly manage and maintain their compliance status, enhancing operational efficiencies.

Sprinto targets companies looking to streamline compliance processes with automation. It simplifies complex compliance frameworks, allowing users to focus more on their core business activities rather than getting entangled in regulatory intricacies. With its robust automation capabilities, Sprinto ensures that compliance tasks are neither overwhelming nor daunting, making it easier for organizations to meet requirements swiftly and efficiently.

What are the key features of Sprinto?

- **Automated Monitoring:** Continuously tracks systems to maintain compliance without manual intervention.
- **Audit Management:** Simplifies audit processes by preparing necessary documentation automatically.
- **Framework Support:** Offers support for multiple compliance frameworks.
- **Risk Assessment:** Identifies potential risks, enabling proactive mitigation strategies.
- **Real-time Alerts:** Notifies users of compliance status changes to ensure immediate action.

What benefits can users find in Sprinto reviews?

- **Efficiency Gains:** Reduces time spent on compliance activities, allowing more focus on growth.
- **Cost Savings:** Minimizes the need for extensive manual compliance efforts, lowering operational costs.
- **Peace of Mind:** Provides assurance of near-perfect compliance adherence through comprehensive automation.
- **Scalability:** Easily adapts to growing business needs without overhauling existing processes.

Sprinto is implemented across tech-driven industries that require stringent compliance checks such as fintech, healthcare, and SaaS. Its automation capabilities make it particularly suitable for these sectors, ensuring seamless integration into existing workflows without disrupting business operations.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

- ✓ “In every IT sector or domain, compliance auditing plays a vital role, and it has literally helped us in a very good sense, up to leveraging its capabilities to a high level, providing paperless work, generating the reports quickly, having the auditing compliance things in place, checking out if all systems are following all standard best practices or not, sending out alerts, notifications, and other key metrics already in place.”

Aditya Bhatt

Sr. Project Delivery Lead | Sr. Technical Lead at a manufacturing company with 5,001-10,000 employees

- ✓ “Sprinto has positively impacted my organization by saving a lot of time, and how much is difficult to say.”

Pieter Geelen

Freelancer at geelen.io

- ✓ “Sprinto is a very good tool with no need for improvements.”

Pushpa Guddappa Chikkannanavar

Cybersecurity Analyst at a tech vendor with 501-1,000 employees

- ✓ “Specific outcomes since using Sprinto include reduced audit preparation effort by approximately 50 to 60%, significantly reduced manual evidence collection, faster remediation of compliance gaps, and improved visibility into compliance status across the organization.”

Sarthak Chavda

Trainee at Veefin

- ✓ “Sprinto has impacted our organization very positively by streamlining compliance management, reducing audit preparation effort, improving visibility into our security controls, and ensuring ongoing compliance rather than treating audits as a one-time project.”

Udit Parekh

DevOps Engineer at Veefin

- ✓ “Sprinto has positively impacted our organization by helping us to obtain certificates like ISO, which has allowed our organization to reach out to customers and acquire new clients.”

Verified user

DevOps Engineer at a transportation company with 1,001-5,000 employees

“The best features Sprinto offers are that it saves time and manual effort, reduces audit preparation stress, and a lot of manual work during audits, which improves our visibility and compliance status and enhances our security.”

Verified user

Associate Software Engineer at a tech services company with 11-50 employees

What users had to say about valuable features:

“In my opinion, the best features Sprinto offers include an accurate task list and the solution itself. For example, if someone is not able to understand what a specific task is about, there is proper guidance and a video available for that, which is quite a good feature.

“When I initially joined the organization, I didn't know about Sprinto's functionalities and how it works, but with the help of the guidance videos, I was easily able to understand how things are working and how I need to work, so that is quite helpful..”

Verified user

DevOps Engineer at a transportation company with 1,001-5,000 employees

[Read full review](#)

“The best features Sprinto offers are automated evidence collection, continuous compliance monitoring, and cloud security posture visibility, and it can be easily integrated with AWS and our SaaS platform.

“Automated evidence collection has made the biggest difference for our team. Before Sprinto, gathering audit evidence required significant coordination from multiple teams. Now most of the evidence is collected automatically.

“Sprinto has impacted our organization very positively by streamlining compliance management, reducing audit preparation effort, improving visibility into our security controls, and ensuring ongoing compliance rather than treating audits as a one-time project..”

Udit Parekh

DevOps Engineer at Veefin

[Read full review](#) 

“Sprinto offers several best features such as automated evidence collection, continuous compliance monitoring, cloud security posture visibility, audit management, integration with AWS and SaaS platforms, compliance dashboard, and reporting.

“Sprinto has helped me rely most on the features of streamlining compliance management, reducing audit preparation effort, improving visibility into security controls, and ensuring ongoing compliance rather than treating audit as a one-time project.

“Specific outcomes since using Sprinto include reduced audit preparation effort by approximately 50 to 60%, significantly reduced manual evidence collection, faster remediation of compliance gaps, and improved visibility into compliance status across the organization.

“Overall, Sprinto has helped transform compliance from a largely manual process into a continuous and automated workflow. It reduced audit stress, improved visibility into compliance posture, and allowed engineering teams to spend more time on business tasks..”

Sarthak Chavda

Trainee at Veefin

“Sprinto offers several valuable features. It provides very good authentication capabilities, and the support team consistently supports us with any requirements we have. They support us anytime we send emails, and any doubts we have are addressed through weekly scheduled calls. They support us from the beginning to the end of the process, and the support team is excellent.

“For example, in GCP, when a user enables MFA but it does not display in their system due to configuration issues, we send an email and the support team immediately connects with us to resolve the issue. After that resolution, we have not faced that issue until now, so they support us very well.

“Sprinto has positively impacted our organization because we have completed the ISO and SOC 2 renewal for the fourth time and are continuing with the same tool for an extended period.

“Specific outcomes and metrics related to ISO and SOC 2 renewals show that Sprinto provides a fast process with excellent support. When we have time, we resolve issues quickly, and they also help us by providing tips to complete ISO and SOC 2 renewals. Sprinto is a very good tool with no need for improvements..”

Pushpa Guddappa Chikkannanavar

Cybersecurity Analyst at a tech vendor with 501-1,000 employees

[Read full review](#) 

“Sprinto offers extensive integration and cloud stacks because it has the ability to plug in directly into your cloud services such as AWS or GitHub, or if you have Bitbucket or in your Workday system. That is where it acts as a game changer for us. It automatically pulls in the evidences or the access control or the encryption things, such as how things are going from each employee's system, if things are on the right side, getting authenticated properly, two-factor authentication is being enabled or if something unusual is happening, it automatically takes out the screenshot and sends us the alert if we need to check out something. We need not to manually take the screenshot or set up the alert.

“Sprinto has built-in monitoring devices where security policies are also enabled. Its multi-framework on data encryption side makes sure that all the patient information, their PHI, HIPAA, and SOC 2 Type 2 consents are in place. It eliminates almost 40 percent of the redundant work that we were previously facing. Now the team can actually focus on their current tasks and innovation. The automatic creation of the dashboard really helps us in the auditing and compliance side.

“Sprinto has positively impacted my organization by reducing time since earlier it was a manual process, taking a lot of time from each individual team or the team member spending or taking out spare time from their busy tasks. Right now they are able to have that time specified into actionable items onto their innovation side. It helped us in the auditing and compliance side to get the reports and all things in place before any audit is arriving. It also helped us in eliminating a lot of redundant work, almost more than 40 percent, which we were previously facing. A lot of paperwork is also reduced. Reports are getting generated faster and in a more seamless way..”

Aditya Bhatt

Sr. Project Delivery Lead | Sr. Technical Lead at a manufacturing company
with 5,001-10,000 employees

[Read full review](#) 

“The best features Sprinto offers include the amount of integrations, and I really appreciated that. Being a SaaS company, it was important that we could connect G Suite from Google, Cloud Identity from Google, GitHub, and also Google Cloud itself to that platform and basically have it analyzed from there and then get feedback on what we need to do to make it compliant. All those integrations were there, and also for Zoho One, the ERP platform, those integrations were available as well. It made it very easy to gather your initial base of information. Due to those integrations, that was very helpful.

“Another thing is the AI agent that helped you walk through it. It's really useful. It gives you something to interact with, and their customer support is excellent. If you have questions, you probably have an answer within a few hours.

“My experience with the AI agent made it useful for me because it's a lot of information and a lot of steps you need to do. The AI agent helps you to do it step-by-step and not necessarily needing to have the full overview of what you're currently doing. It made it feasible to churn through that workload in essence, and you can also ask it questions. When in doubt, you have something to talk to, and I perceived it as being very useful.

“A feature from Sprinto that is less obvious and I would like to add is that they package their software with partners. Those partners will help you do your certification for a specified fee that is specified beforehand. If you ever get into the thick of needing to certify your company, then you kind of know beforehand how much it's going to cost you, and I think that's also a very powerful feature that gives you more control of your budget when doing the certification process.

“Those savings impacted my startup's growth and operations by allowing us to scale faster, so our core product wasn't about compliance but about something else, and we could basically stay on track. That was very powerful and helpful with all of those things.

“Sprinto has positively impacted my organization by saving a lot of time, and how much is difficult to say. I think we saved a lot of time and a lot of money. Sprinto was substantially cheaper than the other service providers. Also, their partners are not asking top dollar, so we definitely saved about thirty or forty thousand dollars

by selecting that tool. The tool itself also saves us about two full-time equivalents in terms of workload because it automates so many steps..”

Pieter Geelen

Other Solutions Considered

“We have not used any different solution before Sprinto, as we primarily relied on spreadsheets, manual evidence collection, and internal tracking processes..”

Udit Parekh

DevOps Engineer at Veefin

[Read full review](#) 

“I previously used a different solution before Sprinto, and it involved a lot of needs to check out, do some code logic, and have a scrutinized one by one of all things, leading to a lot of manual spreadsheet work. That is where it helped us a lot, getting things in an automated way..”

Aditya Bhatt

Sr. Project Delivery Lead | Sr. Technical Lead at a manufacturing company with 5,001-10,000 employees

[Read full review](#) 

ROI

Real user quotes about their ROI:

“Sprinto has provided significant return on investment. The biggest ROI comes from reduced audit preparation time, less manual compliance work, lower operational burden on engineering teams, and faster completion of compliance requirements..”

Sarthak Chavda

Trainee at Veefin

[Read full review](#) 

“I have seen a return on investment. We requisitioned the tool, and I think it saved us twenty, thirty, or maybe forty thousand dollars by going for this provider instead of a different one. I also think we're saving about two FTE in work if we would want to do it ourselves..”

Pieter Geelen

Freelancer at geelen.io

[Read full review](#) 

“I have seen a return on investment with Sprinto because both money is saved and time being saved because employees can also focus on some urgent deliverables and the innovations we are currently doing as a part of technological advancement. That is where it has helped us a lot..”

Aditya Bhatt

Sr. Project Delivery Lead | Sr. Technical Lead at a manufacturing company with 5,001-10,000 employees

Use Case

“My main use case for Sprinto is for auditing and compliance-related tasks. I use Sprinto for auditing and compliance by enabling the S3 bucket and reviewing company policies, ensuring that all employees accept and acknowledge the company policy, along with cloud-related tasks like enabling S3, RDS backup, and similar activities..”

Verified user

DevOps Engineer at a transportation company with 1,001-5,000 employees

[Read full review](#) 

“Our main use case for Sprinto is compliance automation and continuous monitoring for our security frameworks.

“Recently, we were preparing for a compliance audit and needed to collect evidence from AWS, IAM systems, and endpoint security tools. Sprinto automatically gathers most of the required evidence from all systems and continuously monitors controls, helping to reduce the manual work required from multiple teams.

“We use Sprinto regularly to monitor compliance posture, track control failures, review security alerts, and ensure that our cloud infrastructure remains aligned with compliance requirements..”

Udit Parekh

DevOps Engineer at Veefin

[Read full review](#) 

“Sprinto is used primarily for compliance, automation, and continuous monitoring for security frameworks. Sprinto helps manage evidence collection, track compliance controls, monitor cloud infrastructure, and prepare for audits with significantly less manual effort.

“Recently, during preparation for a compliance audit, evidence was needed from AWS identity management systems, endpoint security tools, and HR platforms. Sprinto automatically gathered most of the required evidence and continuously monitored controls, reducing the manual work required from multiple teams. This helped complete audit preparation much faster than previous audit cycles.

“Sprinto is used regularly to monitor compliance posture, track control failures, review security alerts, manage audit evidence, and ensure that cloud infrastructure remains aligned with compliance requirements..”

Sarthak Chavda

Trainee at Veefin

[Read full review](#) 

“My main use case for Sprinto is that I was in the role of interim CTO for a startup, and we needed GDPR, ISO 27001, ISO 9001, and SOC 2 compliance.

“A quick specific example of how Sprinto helped me with those compliance needs is that compliance can be challenging, and Sprinto has a completely automated workflow that you can follow to accrue all the documents and to get all the processes in place. Compliance is not just a matter of certifying that you have everything in place but also doing certain things, and Sprinto provides the full breadth of that and also gives you feedback on how well you are doing. In our case, we are a SaaS company, and also lots of the software itself needs to be validated as well.

“What was very powerful about my use case and how Sprinto helped me is that the landscape of compliance is very complex, and Sprinto really helped me to navigate through that. We were a bit on a budget as well, being a startup, and we wanted to get there as easily as possible. I was really impressed with how Sprinto got me there..”

Pieter Geelen

Freelancer at geelen.io

[Read full review](#) 

“Our main use case for Sprinto involves handling GCP for Bitbucket and MFA-related issues, along with training and MFA-related compliance requirements. We are maintaining over 10 use cases as users must complete compliance training and MFA-related tasks to obtain ISO and SOC 2 certifications.

“Sprinto helps with ISO and SOC 2 certifications by maintaining use cases across all our devices. We have configured our computers used in our organization at the user level with desktop names and login information in Sprinto. When a user logs into the system, MFA must be enabled. If it is not enabled, we receive notifications in Sprinto, and we ping the user and send emails to complete MFA setup. When issues reach 900 plus during the ISO audit phase, we continuously follow up with users for completion of all requirements. Once completion is achieved, we obtain the certification from Sprinto.

“Our main use cases include MFA related to GCP, Bitbucket MFA, Infosec training, and GCP training..”

Pushpa Guddappa Chikkannanavar

Cybersecurity Analyst at a tech vendor with 501-1,000 employees

[Read full review](#) 

“My main use case for Sprinto is because we are into the healthcare and life science domain, so auditing and compliance play a vital role for us. Sprinto primarily helps us in managing the heavy load of the compliance and auditing sides and helps us in tracking things in an easier way and getting things integrated from the cloud side via the integration sector to DevOps and AWS cloud as well.

“I definitely have more to add about my main use case with Sprinto because earlier, the organization used to depend upon specific team members, it could be the IT, network, security side or the DevOps team, to have a few configurations and things in place from the security and compliance point of view, which leads to a lot of heavy paperwork. The team needs to take out some time and bandwidth from their current tasks and have to specifically allot some hours into this to make sure things are on the right side on compliance as well.

“With the integration of Sprinto, it helps us in leveraging its capabilities and making things automated so that we have reduced the amount of work which the team was individually spending into this. Now they can focus on innovation. One of the use cases I would specifically highlight is that because we operate in the life science or healthcare sector, we handle sensitive patient health information, the PHI, PII, and the HIPAA, and making the HIPAA SOC 2 Type 2 non-negotiable requirements for pharmaceutical partners. That is where it helped a lot in making things automated so that we need not to do a manual check on a regular basis, having Sprinto enabled on the cloud services. It makes things much easier for us.

“We implement Sprinto to bridge the gap between our high-speed DevOps environment and the rigorous documentation demand of global healthcare sectors for the auditing side. Even during vendor time, even when there is third-party vendor auditing or any official is coming up, we can easily generate the reports or make things in place before any auditing is happening. That is a very real-time use case it helped us with..”

“Sprinto's integrations are particularly valuable because they reduce the burden on engineering teams while keeping compliance documentation up to date.

“Sprinto's monitoring and compliance insights are generally accurate and reliable. Sprinto has proven dependable for identifying compliance gaps and tracking control status.

“For others looking into using Sprinto, the recommendation is to connect all major systems early, assign clear control owners, and leverage continuous monitoring instead of treating compliance as a periodic activity. Sprinto provides more value from the platform when more integrations are configured. Overall, this review rates Sprinto at an 8 out of 10..”

Sarthak Chavda

Trainee at Veefin

[Read full review](#) 

“Sprinto is very good, and every organization can use it. Some customization could be made that would be more useful, along with additional integrations. More

advanced automated remediation could also be provided through AI agents.

“Sprinto focuses heavily on compliance and security, making governance one of its strengths, and the platform provides strong visibility into controls ownership and compliance requirements.

“The monitoring and compliance insights are generally accurate and reliable. We find Sprinto dependable for identifying compliance gaps and tracking control status.

“I would advise others looking into using Sprinto to connect all major systems early, assign clear control owners, and leverage continuous monitoring instead of treating compliance as a periodic activity. The more integrations you configure, the more value you will get from the platform.

“I give Sprinto a rating of 8 out of 10..”

Udit Parekh

DevOps Engineer at Veefin

[Read full review](#) 

“I think as I mentioned on the advantages of Sprinto, that is basically the thing. Its deep level integration and technological capabilities are able to easily integrate with your cloud services or any internal code, such as code repository you are having, and then having the auditing and compliance things specifically on the life science or healthcare sectors, enabling the HIPAA consent, the SOC 2 Type 2, creating the automated dashboards for you.

“On a scale of one to ten, I would rate Sprinto a nine out of ten because it is really a promising tool. I choose a nine out of ten for Sprinto because of its extensibility in the kind of functionality it is providing. In every IT sector or domain, compliance auditing plays a vital role, and it has literally helped us in a very good sense, up to leveraging its capabilities to a high level, providing paperless work, generating the reports quickly, having the auditing compliance things in place, checking out if all

systems are following all standard best practices or not, sending out alerts, notifications, and other key metrics already in place.

“My advice to others looking into using Sprinto is to definitely go for it, keeping in mind what kind of key feature metrics or things they are currently looking for from the auditing and compliance perspective. If you are also in the healthcare or life science sector, or maybe any other that suffices your requirement with respect to Sprinto and its integration capabilities with your cloud services or code repository site, you can definitely go with it. It helps you a lot in generating good high-quality reports for your leadership team members, sending alerts or notifications, and ensuring that all your employees are following standard best practices in IT security and compliance. I rate Sprinto a nine out of ten overall..”
