Product Recap

Airbyte Cloud

Airbyte Cloud Recap

Airbyte Cloud is a modern data integration platform that facilitates seamless data movement across applications and warehouses with user-friendly features and robust connectors.

Airbyte Cloud offers an adaptable approach to data integration, designed to handle large-scale data synchronization efficiently. It supports various environments, providing reliable and fast data transfer. Users benefit from its open-source foundation, offering flexibility and innovation. Its architecture allows developers to create custom connectors, making it highly customizable to meet specific data movement needs.

What are the crucial features of Airbyte Cloud?

- **Open-Source Flexibility:** Leverage an open-source model for customizable solutions
- **Pre-built Connectors:** Access a wide range of connectors for seamless data integration
- **Custom Connector Creation:** Design and implement connectors tailored to unique data flow requirements
- **Advanced Scheduling:** Automate data transfers with scheduled synchronization
- **Error Monitoring:** Effective tracking and error logging for uninterrupted workflows

What benefits or ROI should users expect?

- **Reduced Integration Costs:** Optimize expenses with efficient data synchronization processes
- **Improved Data Accuracy:** Enhance data reliability through effective integration
- **Scalability:** Easily adapt to increasing data volumes with scalable infrastructure
- **Faster Deployment:** Speed up implementation timelines with pre-built features

Airbyte Cloud is utilized in sectors such as e-commerce, where quick access to real-time data is essential for inventory management, and in financial services, enabling seamless transactions and accurate data analytics. Its flexibility supports environments demanding high agility, driving transformation with minimal disruptions.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

- ✓ “Airbyte Cloud has positively impacted my organization by reducing the manpower required for managing the underlying resources of a data sync.”

ParthasarathyT

Senior Associate Infrastructure at Publicis Sapient

- ✓ “Since using Airbyte Cloud, we save approximately seventy to seventy-five percent of the time our data team was spending on manual data preparation.”

Tanisha .

Product Manager Intern at a agriculture with 11-50 employees

- ✓ “Airbyte Cloud is a strong tool for extracting and loading data from various sources to a data warehouse, which I am eager to leverage since I do not have to build my own custom extractors.”

Ronald Mwenda

Data Governance Engineer at a computer software company with 11-50 employees

“One significant benefit for us is reducing the amount of custom pipeline maintenance.”

Umarmalik Farooq

Senior Software Engineer at a tech vendor with 11-50 employees

“I definitely recommend and use this product because it has vast security capabilities.”

Sharat Khuroo

Python Developer at Appice

“Airbyte Cloud has positively impacted our organization by being very helpful and speeding up our work environment.”

Bhaglal Kapar

DevOps/Cloud Engineer at a manufacturing company with 51-200 employees

“The best features that Airbyte Cloud offers in my experience are the seamless connectivity, which is very fast to connect, and the UI is very easy to set up.”

Validated user

Data Engineer at a tech vendor with 10,001+ employees

What users had to say about valuable features:

“The best features that Airbyte Cloud offers in my experience are the seamless connectivity, which is very fast to connect, and the UI is very easy to set up.

The user interface of Airbyte Cloud is actually good, and it is very easy to connect with any kind of source system because it has a lot of options that you can see from the UI itself, making it very easier to handle and manage.

Airbyte Cloud has not been part of my organization on a larger scale, so I am not able to comment on how it has impacted us positively..”

Validated user

[Read full review](#) 

Data Engineer at a tech vendor with 10,001+ employees

“The best features Airbyte Cloud offers are that in our limited use case, it was fairly easy to set up, and the web portal was intuitive to navigate, to monitor the jobs, to trigger them if anything failed, and to set up the connectors, making it user-friendly.

The navigation was intuitive overall, and there was no particular part of the setup or monitoring that stood out as especially helpful; it was just an overall experience where the navigation was pretty intuitive.

Airbyte Cloud has positively impacted my organization as it was a fairly easy and low-cost way of integrating those external data sources with our overall data ecosystem. I noticed that the first solution we selected was Airbyte Cloud because it was the lowest cost and it offered us everything we needed, so I cannot really compare it to anything else..”

Piotr Rozwadowski

Senior Product Analyst at Argyle

[Read full review](#) 

“Airbyte Cloud's best features include scheduled runs, many pre-built connectors, and an easy no-code setup. I am looking at my next project where I plan to leverage the Agentic AI workflows within Airbyte Cloud, and one thing I have noticed is that with the managed platform, it is easier to do other tasks and just build the connectors while ensuring downstream apps or users do not miss out on any data.

Airbyte Cloud has positively impacted my organization by cutting down the number of deployments, as it handles orchestration monitoring that would typically require an engineer. It is also easier to integrate with DBT for transformation, enabling pipeline management, and I appreciate its flexibility in deployment, preferring the managed option due to the lack of engineering overhead and its ability to handle large data volumes through parallel extraction..”

Ronald Mwenda

Data Governance Engineer at a computer software company with 11-50 employees

[Read full review](#) 

“The best features Airbyte Cloud offers are the pipelines we are building, which are seamless and just a drag and drop, no-code, low-code platform. This is the most liked feature I have seen in Airbyte.

“This definitely saves time and it is also easy for anyone to pick up the skill and develop the pipelines, impacting my daily workflow positively.

“Airbyte Cloud has positively impacted our organization by making our daily tasks much easier. It helped with faster reporting and it saved the team's time to develop and build the ETL pipelines, which are specific outcomes and metrics I can share..”

Validated user

[Read full review](#) 

Data Engineer at a tech vendor with 51-200 employees

“I have been using Airbyte Cloud for three years.

“I use Airbyte Cloud because it has a large number of prebuilt connectors, which makes my work easy to connect applications and databases without extensive custom development. I have been working in ETL processes mainly.

“I found the user interface very easy and simple to navigate. Even when managing multiple data syncs, I can easily switch between them. The best feature that I have liked about it is the scheduling and automation features that help reduce manual effort significantly in moving data between systems.

“I also appreciate the monitoring capabilities of Airbyte Cloud. I can track sync stats and identify failures quickly if there are any. The logging information is very helpful when I have to troubleshoot connection or synchronization issues. This platform provides flexibility to integrate with modern data stack components and cloud environments..”

Sharat Khuroo

Python Developer at Appice

[Read full review](#) 

“The best features Airbyte Cloud offers are the huge connector library, automatic schema change detection, and scheduling and synchronized frequency control. The transformation support with dbt integration, and the clear monitoring dashboards that show sync status and error every time are also notable.

Definitely the pre-built connectors have been the most valuable feature for my team, and it has made my workflow easier. As a product manager intern, I don't have deep engineering resources to build custom data pipelines from scratch. Having a ready-made connector for tools such as Google Sheets, PostgreSQL, HubSpot, and various API tools means I can set up a new data pipeline in under one hour without writing a single line of code. The self-service capability has been incredibly empowering for the product team specifically.

Airbyte Cloud has positively impacted our organization by directly improving our product decision-making speed. Before, we were making feature decisions based on gut feelings or out-of-date weekly reports. Now we have nearly real-time data flowing into our dashboards, and we can see exactly how farmers are using our app, which drone features are being used the most, and where the drop-offs happen. This has made our product roadmap more evidence-based..”

Tanisha .

Product Manager Intern at a agriculture with 11-50 employees

Other Solutions Considered

“I have no idea if we evaluated other options before choosing Airbyte Cloud, because when I started my previous job, it was already part of our data ecosystem..”

Piotr Rozwadowski

Senior Product Analyst at Argyle

[Read full review](#) 

“Airbyte Cloud compares favorably to other data integration tools I have used or evaluated, as it is more smooth and manageable, and you can set it up on your own without a developer..”

Tanisha .

Product Manager Intern at a agriculture with 11-50 employees

[Read full review](#) 

“Because it was in my previous organization, and I am not sure whether they have moved ahead with it or not, but from a POC perspective, it does feel that I should have used it, and it was working seamlessly..”

Validated user

Data Engineer at a tech vendor with 10,001+ employees

[Read full review](#) 

“Previously, we did not formally migrate from another dedicated ELT tool. Before Airbyte Cloud, the ingestion workflows were custom script-based. Airbyte Cloud replaced a set of in-house or script-driven pipelines instead of a commercial tool..”

Umarmalik Farooq

Senior Software Engineer at a tech vendor with 11-50 employees

[Read full review](#) 

“I was not directly involved in the structured evaluation of multiple ELT tools. The move towards Airbyte Cloud was mainly driven by the need to reduce maintenance on custom ingestion pipelines and move to a managed solution..”

Umarmalik Farooq

Senior Software Engineer at a tech vendor with 11-50 employees

[Read full review](#) 

ROI

Real user quotes about their ROI:

I have observed a return on investment with 30 to 70 percent of costs saved. Due to faster sync capabilities, there is a reduced need for data engineer resources. Nearly 20 percent of human manual work has also been saved.

ParthasarathyT

Senior Associate Infrastructure at Publicis Sapient

[Read full review](#) 

“Since using Airbyte Cloud, we save approximately seventy to seventy-five percent of the time our data team was spending on manual data preparation. That is roughly six to eight hours per week recovered. For a lean startup team, that is significant. We also avoid hiring a dedicated data engineer for pipeline maintenance, which has saved us a significant salary. Airbyte Cloud essentially covers that function at a fraction of the cost..”

Tanisha .

Product Manager Intern at a agriculture with 11-50 employees

[Read full review](#) 

“From my perspective as a user, the main benefit was reducing engineering time spent maintaining custom ingestion pipelines and lowering operational overhead around data syncs, which indirectly contributes to efficiency. I cannot quantify this in terms of financials, but the time saved on pipeline maintenance and troubleshooting was the most noticeable practical benefit..”

Umarmalik Farooq

Senior Software Engineer at a tech vendor with 11-50 employees

[Read full review](#) 

Use Case

“My main use case for Airbyte Cloud is managing an OLTP database. We had our OLTP database in Oracle, and we were moving daily data from Oracle to Redshift, which is our OLAP database, for our dashboarding and analytics requirement..”

Validated user

Data Engineer at a tech vendor with 51-200 employees

[Read full review](#) 

“My main use case for Airbyte Cloud is that in my previous job, we used it to integrate two data sources into our database. A specific example of how I used Airbyte Cloud to integrate those data sources is that we set up a connector between the sources and the database, which would run once daily to retrieve any fresh data from the source and store it in our database..”

Piotr Rozwadowski

Senior Product Analyst at Argyle

[Read full review](#) 

“My main use case for Airbyte Cloud is as an integration tool for connecting to different sources, and for the client I was working with, we used Airbyte Cloud's established Amazon connector to sync data from Amazon, with some data scheduled for a daily run and others for hourly runs.

I mostly use Airbyte Cloud for connection and integration from the source, as it is an integration and orchestration tool that allows you to avoid using Airflow to orchestrate the runs or job runs since Airbyte Cloud has those capabilities..”

Ronald Mwenda

[Read full review](#) 

Data Governance Engineer at a computer software company with 11-50 employees

“I wanted to pull up data from one of the source systems and dump it into Snowflake, and for that I used Airbyte Cloud as my ingestion tool.

The data I was pulling was majorly around the healthcare industry, containing information primarily about hospitals and some personal identifiable information about the staff, et cetera, and I needed to dump it into Snowflake because it was a POC regarding the migration of the whole cloud system from the source to Snowflake.

As it was just a POC, I was using Airbyte Cloud in a public cloud and with a small connection using a personal organization-based account..”

Validated user

[Read full review](#) 

Data Engineer at a tech vendor with 10,001+ employees

“Our main use case for Airbyte Cloud is consolidating data from multiple sources: drone flight logs, RTs, soil sensors, weather APIs, mobile app backends, and CRM tools, all into one central data warehouse. As a product team, we use the unified data to track product usage patterns, monitor field performance, and make better decisions about future priorities.

We had a specific challenge where our drone data was stored in one database, farm engagement data was in another system, and weather data was coming from a third-party API. Our data analysts were manually downloading and combining this data every week, which was error-prone and slow. I helped implement Airbyte Cloud to automate all three data pipelines in our BigQuery warehouse within a two-week setup. Our analysts had a single source of trust, updating automatically every hour, and the weekly manual data merge process was completely eliminated..”

Tanisha .

Product Manager Intern at a agriculture with 11-50 employees

[Read full review](#) 

“I use Airbyte Cloud primarily for data integration and ETL workflows between different systems and destination databases.

“My setup is straightforward with Airbyte Cloud, and I use it for creating new pipelines such as a pipeline for SFTP to MinIO, MinIO to PG Sequel, and a pipeline between PG Sequel systems.

“One challenge I have faced recently in Airbyte Cloud is occasional connector sync failure that requires troubleshooting through logs.

“I use Airbyte Cloud as a managed SaaS platform for orchestrating data integration workflows with a cloud-hosted approach. This helps especially to reduce the operational overhead associated with infrastructure maintenance. I have connected various source systems and databases to destinations through Airbyte Cloud, and I have used it to schedule and monitor data synchronization jobs. Since this platform is managed by Airbyte, my team personally focuses more on data pipeline and business requirements rather than infrastructure management..”

Sharat Khuroo

Python Developer at Appice

[Read full review](#) 

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

I'm not sure if we purchased Airbyte Cloud through the AWS Marketplace because that is purchased by our manager. My experience with pricing, setup cost, and licensing is that so far it is straightforward, and I do not feel any difficulty.

Bhaglal Kapar

[Read full review](#) 

DevOps/Cloud Engineer at a manufacturing company with 51-200 employees

“The experience of integrating Airbyte Cloud into our existing tech stack was much smoother than I expected, especially considering how complex our tech stack is at Adarsh Human. We have a fairly diverse setup, using PostgreSQL for our core application database..”

Tanisha .

Product Manager Intern at a agriculture with 11-50 employees

Customer Service and Support

The customer support is actually good because we have an agent first, and then connect through the support with the tickets, so that is also very fast.

Bhaglal Kapar

DevOps/Cloud Engineer at a manufacturing company with 51-200 employees

Other Advice

“I recommend Airbyte Cloud's self-hosted solution if needed, and only if you require the features of Airbyte Cloud, you can opt in for Airbyte Cloud. I gave this review a rating of eight..”

Validated user

Data Engineer at a tech vendor with 51-200 employees

[Read full review](#) 

“I cannot comment on Airbyte Cloud's AI capabilities regarding its governance and security because I have not used it and I never worked on it.

My review rating for Airbyte Cloud is 7..”

Validated user

Data Engineer at a tech vendor with 10,001+ employees

[Read full review](#) 

“Regarding Airbyte Cloud's AI capabilities, I did not have a chance to use any of the AI features, so I cannot say anything about its governance and security.

Regarding Airbyte Cloud's AI capabilities, I did not get a chance to use any of the AI features, so I have nothing to say about its accuracy and reliability of output.

My advice to others looking into using Airbyte Cloud is that I think they should give it a try; it is fairly easy to use in the scenarios we use it for, and the costs are reasonable. I gave this review a rating of ten out of ten..”

Piotr Rozwadowski

Senior Product Analyst at Argyle

[Read full review](#) 

“Airbyte Cloud is already a good application and does not need improvement.

The learning curve for new users on our team is very easy to understand. It does not require coding skills to implement it, and users can use it very easily.

I would describe the documentation and resources provided by Airbyte Cloud as awesome. Their connectivity and core scale are good, and the complex parts, such as connectivity to IoT and APIs, are well documented. For a product intern such as myself who needs coordination and does not have deep developer skills, Airbyte Cloud made everything very manageable.

My advice for others looking into using Airbyte Cloud is that if they have multiple data flows, this is a great application and a great product for connectivity and all types of data in one system. Airbyte Cloud provides more complex customized IoT and API solutions, and I believe everyone should use Airbyte Cloud. I rate this product an eight overall..”

Tanisha .

Product Manager Intern at a agriculture with 11-50 employees

[Read full review](#) 

“I would rate Airbyte Cloud nine out of ten because it has really helped me a lot. A perfect ten would require addressing the areas for improvement that I have already discussed: more detailed error messages and enhanced monitoring dashboards, as well as resolving the occasional connector sync failure that requires troubleshooting through logs.

“The governance and security of Airbyte Cloud is very good. From other applications, I have seen that this is a trustworthy application that I can use for my sensitive projects, especially when dealing with banks. I definitely recommend and use this product because it has vast security capabilities.

“From my experience, Airbyte Cloud's AI-related capabilities are helpful,

especially for accelerating connector setup and providing configuration suggestions and troubleshooting. However, I view them more as productivity aids rather than something to rely on without validation. The recommendations and configurations usually serve as a good starting point and reduce manual effort. However, I personally prefer to review the generated settings and mappings before moving them into production environments. The reliability of the output is consistent for common integration scenarios, but in more complex use cases involving custom transformations, schema changes, or uncommon connectors, some manual adjustments are occasionally required.

“My overall rating for Airbyte Cloud is nine out of ten..”

Sharat Khuroo

Python Developer at Appice

[Read full review](#) 

“On a scale of one to ten, I rate Airbyte Cloud an eight.

I chose that number because there are numerous connectors available, and with Airbyte Cloud's more than 600 connectors, the products and solutions are improving. I believe with the adoption of Agentic AI, it might even move to a nine once I start using the Agentic AI workflows.

I have not used Airbyte Cloud's AI capabilities yet, including its governance and security features, so I am not sure about them at this moment, but that is something I plan to explore in the future.

I have not leveraged Agentic AI in Airbyte Cloud so far, but I believe that if you consult AI, it could assist in building a connector, troubleshooting errors, and providing a deep dive on how to address connection errors you might encounter while setting up a connector in the cloud.

In the organization I worked for, Airbyte Cloud is deployed in a private cloud setup

on [AWS](#).

I did not purchase Airbyte Cloud through the [AWS Marketplace](#), as I was already aware of Airbyte Cloud's capabilities and suggested using Airbyte Cloud for integration.

My advice for others considering Airbyte Cloud is that if you are a small business needing to integrate your data sources, such as running an e-commerce business, Airbyte Cloud is the tool to use due to its easy connectivity. If you are strategic about it, you can save on costs related to syncs while avoiding excessive engineering overhead.

My experience with Airbyte Cloud is that I recommended it to a client, and they are currently using it as a customer.

Airbyte Cloud is a strong tool for extracting and loading data from various sources to a data warehouse, which I am eager to leverage since I do not have to build my own custom extractors. It is a no-code platform, and you only need to ensure correct source syncing and orchestrate the runs. It is also easy to integrate with DBT Cloud for transformation and connect with data warehouses like [Snowflake](#)..”

About PeerSpot

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
