Product Recap

Check Point WAF (formerly CloudGuard WAF)

Check Point WAF (formerly CloudGuard WAF) Recap

Check Point WAF offers a robust security framework with AI-driven threat detection and seamless integration, protecting applications and APIs in multi-cloud environments.

Effective in preemptively blocking threats through AI and machine learning, Check Point WAF reduces false positives and operational workload. Its integration capabilities and threat intelligence provide comprehensive protection against zero-day attacks, while centralized management facilitates cost-effective and insightful threat reporting.

What are the main features of Check Point WAF?

- **AI and Machine Learning:** Preemptively blocks threats without signature reliance.
- **Centralized Management:** Simplifies oversight and reduces costs.
- **Threat Intelligence:** Enhances security posture against zero-day attacks.
- **Ease of Deployment:** Quick setup with user-friendly interface.
- **Comprehensive Protection:** Guards against SQL injection and DDoS attacks.

What benefits should be considered by users?

- **Reduced False Positives:** Minimizes operational interruptions.
- **Cost-effectiveness:** Reduces management overhead.
- **Insightful Reporting:** Enables swift response to threats.
- **Seamless Integration:** Enhances security processes with existing tools.

Check Point WAF is employed in industries securing web applications and APIs, especially in multi-cloud environments. It effectively protects backend services, prevents unauthorized access, and monitors traffic, making it suitable for businesses with diverse infrastructures. It ensures compliance with security standards and adapts to fluctuating traffic patterns.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

“In short, Check Point CloudGuard WAF is a powerful tool.”

Krishnakumar Mahadevan

CISO at Spink Solutions Private Limited

“I would definitely recommend this solution because I do not want to implement one more traffic function as I can eliminate the firewall and use Check Point WAF (formerly CloudGuard WAF) alone, thus eliminating Layer 3 traffic directly connecting to my Web Application Firewall.”

Mohan Janarthanan

Associate Vice President at Novac Technology Solutions

“Check Point WAF (formerly CloudGuard WAF) is especially valuable because of its cloud-native architecture and AI autonomous protection capabilities.”

SreejeshSoman

Technical Consultant at Vertex Techno Solutions (B) Pvt Ltd

- ✓ “The biggest benefit from Check Point CloudGuard WAF that I saw is that it comes with one solution that completely outperforms its competitors.”

Ricky Makkar

Senior Network Security Consultant at NTT DATA

- ✓ “Check Point CloudGuard WAF provides great visibility and flexibility to use multiple FQDNs in a single load balancer.”

Mohan Janarthanan

Associate Vice President at Novac Technology Solutions

- ✓ “The best features Check Point WAF (formerly CloudGuard WAF) offers in my experience are deployment, reliability, and scalability, and it has positively impacted my organization as a money saver and time saver by providing proper responses within 10 to 20 seconds, resolving queries quickly with excellent accuracy and reliability from its AI capabilities.”

MANOJ CHOUDHARY

MANAGER IT at Axis Bank

- ✓ “Since implementing Check Point WAF (formerly CloudGuard WAF), it has helped us to get more business, and along with that, we are able to prevent threats to our organization using Check Point WAF (formerly CloudGuard WAF).”

KAUSHIL AMBATKAR

Security Architect at Synechron

What users had to say about valuable features:

“I have found features like Cisco ASA and Firepower most valuable. Secure Firewall is a secure firewall with features like WAF and web applications. We have web filtering applications, secure features, and application controls among other features. I am not using Cisco SecureX with Secure Firewall..”

Verified user

System And Network Administrator at a tech services company with 51-200 employees

[Read full review](#) 

“The features I rely on the most are web application protection policies, real-time threat detection, and traffic visibility through logging and monitoring. The ability to customize rules for specific applications and APIs is useful because it helps reduce false positives while keeping protection active.

“Check Point WAF (formerly CloudGuard WAF) has improved my overall visibility and reduced the amount of suspicious traffic reaching our applications. It has also made security operations more manageable because I can monitor events, fine-tune policies, and respond to threats without making frequent changes to the application itself..”

Verified user

Developer at a healthcare company with 1,001-5,000 employees

[Read full review](#) 

“The best features Check Point WAF (formerly CloudGuard WAF) offers in my experience are deployment, reliability, and scalability. Check Point has all the good features for an organization.

Regarding the stability and deployment features that stand out to me, they are excellent. The client feels relief with the organization, and Check Point WAF (formerly CloudGuard WAF) saves time, making it possible to do business effectively.

Check Point WAF (formerly CloudGuard WAF) has positively impacted my organization in that it is a time saver. We are using other software that takes considerable time to resolve all the queries and problems, but Check Point WAF (formerly CloudGuard WAF) provides proper responses within 10 to 20 seconds, resolving queries quickly.

In terms of the accuracy and reliability of the output from Check Point WAF (formerly CloudGuard WAF)'s AI capabilities, it is excellent..”

MANOJCHOUDHARY

MANAGER IT at Axis Bank

[Read full review](#) 

“What I appreciate about Check Point WAF (formerly CloudGuard WAF) is that it has an auto-enabled CDN within it, which helps us because even if there are floodgates created by an attacker, the CDN gets enabled automatically, and the UI is well organized, so even if a graduate comes in and tries to explore it, they are able to do so.

“Moreover, network segmentation can be done very easily using WAF.

“The key benefits I have seen from using Check Point WAF (formerly CloudGuard WAF) is that it can be centrally managed, so if we have ten firewalls, they can be centrally managed through one center and one platform, which is one of the key features I appreciated.

“Check Point WAF (formerly CloudGuard WAF) has improved my ability to discover, monitor, and protect APIs so that our security risk, which was ambient earlier, is now green, and the security posture assessment by third-party evaluators shows we are green..”

KAUSHILAMBATKAR

Security Architect at Synechron

[Read full review](#) 

“The best feature of Check Point WAF (formerly CloudGuard WAF) in my experience is the dual-layer contextual AI engine, and no streaming rules are required for this.

“Regarding that feature, layer one uses supervised machine learning to instantly scan incoming traffic, and layer two uses unsupervised machine learning to study my specific environment and learn what normal user traffic looks like.

“Check Point WAF (formerly CloudGuard WAF) includes preemptive zero-day protection, which relies on behavioral analysis rather than signature matching, and also includes built-in API security.

“Regarding Check Point WAF (formerly CloudGuard WAF)'s AI capabilities, its governance and security are incorporated in the dual-layer security model, making it better than others. Generative AI is also a feature of Check Point WAF (formerly CloudGuard WAF). Automated API governance, visibility, and regulatory compliance are integral to Check Point WAF (formerly CloudGuard WAF)'s AI capabilities, and the dual-layer security model works in two parts: the gatekeeper layer and the content layer.

“Concerning Check Point WAF (formerly CloudGuard WAF)'s AI capabilities, its accuracy and reliability of output are notable as it is a dual-layer security AI feature. I believe it works on 80 to 90% accuracy, while the reliability also depends on the security, such as automation AI and the dual-layer security AI features..”

Sachin Verma

[Read full review](#) 

Sr. Network and security Engineer at a outsourcing company with 201-500 employees

“The best feature Check Point WAF (formerly CloudGuard WAF) offers is API security.

“The features that stand out to me within Check Point WAF (formerly CloudGuard WAF) include the contextual AI threat engine, which I find to be a very useful tool, as well as automated API discovery. Additionally, I appreciate the unified multi-cloud management that allows for the management of policies, logs, and analytics across hybrid and multi-cloud environments through a single control plane.

“Check Point WAF (formerly CloudGuard WAF) has positively impacted my organization by reducing rule maintenance, leading to less or near-zero false positives, and enabling frictionless DevSecOps alignment. Regarding Check Point WAF (formerly CloudGuard WAF) AI capabilities, it possesses local logging control, PII reduction, log suppression, tenant isolation, and deterministic threat scoring. The granular rule-based access list and auditability are also crucial, as they allow for enforcing strict rule-based access control and maintaining immutable audit logs for all admin actions and support access requests.

“Check Point WAF (formerly CloudGuard WAF) AI-driven threat detection and prevention capabilities have helped my organization by providing more precise detection and response. Check Point WAF (formerly CloudGuard WAF) has improved my ability to discover, monitor, and protect APIs by automatically mapping undocumented API endpoints, ingesting OpenAPI specifications, and enforcing strict schema validation to prevent parameter tampering and logic abuse. This is achieved through automated API discovery and protection. In terms of AI, it evaluates requests against learned behavioral baselines rather than static RegEx signatures, effectively stopping zero-day exploits while drastically minimizing false positives..”

Eslam Osama

security consultant at a tech vendor with 10,001+ employees

[Read full review](#) 

Other Solutions Considered

“I did not use a different solution before Check Point WAF (formerly CloudGuard WAF), as it depends on the organization, its requirements, and the budget..”

Sachin Verma

Sr. Network and security Engineer at a outsourcing company with 201-500 employees

[Read full review](#) 

“Before implementing Check Point WAF (formerly CloudGuard WAF), we did not have any security or application protection challenges because Check Point is good compared to other products..”

MANOJCHOUDHARY

MANAGER IT at Axis Bank

[Read full review](#) 

“Before Check Point WAF (formerly CloudGuard WAF), I used a more basic web application security solution. I switched mainly because I needed better visibility, more flexible application and API-specific policies, and stronger centralized threat detection and monitoring..”

Verified user

Developer at a healthcare company with 1,001-5,000 employees

[Read full review](#) 

“The main reasons I selected Check Point WAF (formerly CloudGuard WAF) over other solutions were that it is a smarter firewall than others, and it was more cost-effective compared to Palo Alto, as they provided a lengthy quotation, and ASA is a legendary solution, but no one uses ASA nowadays..”

KAUSHILAMBATKAR

Security Architect at Synechron

[Read full review](#) 

“I evaluated a few other enterprise WAF options, mainly AWS WAF and Microsoft Azure WAF. I compared them on threat detection, application and API policy customization, visibility, ease of management, and how they would fit into my existing cloud environment..”

Verified user

Developer at a healthcare company with 1,001-5,000 employees

[Read full review](#) 

“I am currently using some Cisco products. I am currently using some switches of Cisco. I am working on the ASA series. I stopped working with Cisco Firewall more than one to two years ago. I am currently dealing mostly with other Cisco products. I am not dealing with Cisco Secure Access or Cisco Duo. I am working with different product vendors such as Check Point and Fortinet. I am working with Check Point Web Application Firewalls and using bundles with them. I am using some features such as WAF and UTP bundles with application controls, web filtering, email filtering, and DNS filtering and controls that are implemented with UTP enterprise bundles and other WAF applications. I have been dealing with Check Point for three to four years on different products. I am using other platforms and testing some things for the networks. I am also using some other products with them..”

System And Network Administrator at a tech services company with 51-200 employees

ROI

Real user quotes about their ROI:

“I have seen a return on investment as I maintain a relationship with Check Point WAF (formerly CloudGuard WAF), which saves time. However, I cannot say it saves money because Check Point WAF (formerly CloudGuard WAF)'s price is high..”

Sachin Verma

Sr. Network and security Engineer at a outsourcing company with 201-500 employees

[Read full review](#) 

“Since implementing Check Point WAF (formerly CloudGuard WAF), it has helped us to get more business, and along with that, we are able to prevent threats to our organization using Check Point WAF (formerly CloudGuard WAF)..”

KAUSHILAMBATKAR

Security Architect at Synechron

[Read full review](#) 

“In terms of pricing, Check Point WAF (formerly CloudGuard WAF) is not expensive; it is worth the investment. If there is no downtime or bottlenecks while accessing your application from the internet, that itself is the return on investment..”

Bala_Krishna

Director at esupport Solutions Pvt Ltd

[Read full review](#) 

“Return on Investment is a key factor for me in deciding to buy a solution on a major scale, so it is very important for me to consider it. I would say the ROI is about 15 to 20 percent..”

Mohan Janarthanan

Associate Vice President at Novac Technology Solutions

[Read full review](#) 

“I have seen ROI mainly through reduced manual security investigation and faster response to suspicious traffic, rather than direct headcount savings. The centralized visibility and automation blocking have saved my team time in day-to-day monitoring and incident handling, although I do not have a formal dollar figure..”

Verified user

Developer at a healthcare company with 1,001-5,000 employees

[Read full review](#) 

“From my experience and client experience, Check Point WAF (formerly CloudGuard WAF) is a good product for cost of ownership and return on investment.

“Check Point WAF (formerly CloudGuard WAF) offers a subscription-based, pay-as-you-use model with monthly or yearly subscription options. This subscription model helps customers manage their costs as an operational expenditure rather than a capital expenditure..”

SreejeshSoman

Technical Consultant at Vertex Techno Solutions (B) Pvt Ltd

[Read full review](#) 

Use Case

“I have found features like Cisco ASA and Firepower most valuable. Secure Firewall is a secure firewall with features like WAF and web applications. We have web filtering applications, secure features, and application controls among other features..”

Verified user

System And Network Administrator at a tech services company with 51-200 employees

[Read full review](#) 

“My main use case for Check Point WAF (formerly CloudGuard WAF) is protecting web applications and API integration. I use Check Point WAF (formerly CloudGuard WAF) in my environment by protecting a public-facing e-commerce website, customer portal, and backend APIs, such as securing a customer portal..”

Sachin Verma

Sr. Network and security Engineer at a outsourcing company with 201-500 employees

[Read full review](#) 

“My main use case for Check Point WAF (formerly CloudGuard WAF) is agentic AI, data collaboration, and organization migrations, providing solutions to clients.

I can give a quick specific example of how I have used Check Point WAF (formerly CloudGuard WAF) in an organization migration by creating dashboards to give proper responses to our clients for our IT teams and resources..”

MANOJCHOUDHARY

MANAGER IT at Axis Bank

[Read full review](#) 

“My main use case is protecting internet-facing web applications and APIs from threats such as SQL injections, XSS, and malicious requests. For example, I use it in front of customer-facing applications to inspect incoming traffic and block suspicious requests before they reach the application servers.

“I also use it for visibility and control over application traffic, not just blocking attacks. The logging and security policies help my team investigate suspicious requests and fine-tune protection rules when new applications or APIs are introduced..”

Verified user

Developer at a healthcare company with 1,001-5,000 employees

[Read full review](#) 

“I have been working with Check Point WAF (formerly CloudGuard WAF) for 14 years.

“Check Point WAF (formerly CloudGuard WAF) is particularly useful for protecting my network from external attacks, such as DDoS attacks and broken authentication.

“Regarding which product of Check Point I would like feedback about, I chose Check Point WAF (formerly CloudGuard WAF) solution..”

KAUSHILAMBATKAR

Security Architect at Synechron

[Read full review](#) 

“My main use case for Check Point WAF (formerly CloudGuard WAF) is web application API protection in cloud-native, hybrid, and multi-cloud environments, where it provides automated AI-driven threat prevention, comprehensive API security, zero-day and OWASP Top 10 protection, as well as bot protection and DDoS mitigation.

“As a scenario, I can describe a broken object level authorization attack where an enterprise is running a containerized microservice application deployed via Terraform or Docker. The front end communicates with the back-end service through a REST API, and user authentication is handled by a central identity and access management provider such as OAuth2. The attack vector involved an attacker logging in with valid, low-privilege user credentials, which led them to probe the application's back-end endpoint. After requesting their own authorized record, they deployed a script to iterate through other IDs to scrape sensitive data from other tenants. Since the API calls are perfectly formatted and authenticated, a legacy signature-based WAF would typically allow this traffic through. However, the mitigation flow includes automatic schema enforcement, behavioral baseline, IAM context awareness, and surgical blocking. By applying these techniques, we can shift from static rule maintenance to dynamic, context-aware analysis, which is where Check Point WAF (formerly CloudGuard WAF) applies..”

Eslam Osama

security consultant at a tech vendor with 10,001+ employees

[Read full review](#) 

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

I find installation challenging, complex, and not easy, as it requires skilled professionals to configure the rules and threats, including AI configurations. The biggest challenge when deploying it is its architectural constraints, including limited synchronization during configuration, and there are many challenges involved in integration.

Ejaz Ahmad

Head Of IT at ArcelorMittal

[Read full review](#) 

“Deployment of Check Point WAF (formerly CloudGuard WAF) is not easy for any device; all devices are complicated. Management is good, and Check Point WAF (formerly CloudGuard WAF) can improve its user interface further..”

Sachin Verma

Sr. Network and security Engineer at a outsourcing company with 201-500 employees

[Read full review](#) 

“Before implementing Check Point WAF (formerly CloudGuard WAF), I was trying to solve network security challenges, particularly all the challenges that exist for network security..”

KAUSHILAMBATKAR

Security Architect at Synechron

[Read full review](#) 

“I think the implementation is easy. GUI-based implementation for firewalls is straightforward. Although the command line is a very simple process, next-generation firewalls now come with GUI-based interfaces..”

Verified user

System And Network Administrator at a tech services company with 51-200 employees

[Read full review](#) 

“The deployment and initial setup are really straightforward; they provide enough documentation, videos, and deployment documents that are really helpful to complete it faster..”

Nagendra-Nekkala

Service Delivery Lead (General Manager)-IT Operations at WAISL Limited

[Read full review](#) 

“The initial deployment was fairly straightforward once the application, traffic flow, and security policies were defined. Ongoing management is manageable, although tuning rules for new applications and investigating certain blocked requests can require additional time from the security team..”

Verified user

Developer at a healthcare company with 1,001-5,000 employees

Customer Service and Support

I find Check Point WAF (formerly CloudGuard WAF) support helpful, but it is not proficient. It is often reliant on the site engineer's involvement, and it does not match the support offered by leaders like Fortinet, who deploy their own trained personnel ready to help anytime.

Ejaz Ahmad

Head Of IT at ArcelorMittal

[Read full review](#) 

“Customer support for Check Point WAF (formerly CloudGuard WAF) is very nice as they provide quick responses. I will give a rating of 10 for the customer support..”

MANOJCHOUDHARY

MANAGER IT at Axis Bank

[Read full review](#) 

“Customer support has been good for issues around configuration or troubleshooting. The support team has generally been responsive and helpful, although some complex cases can take additional time to resolve when deeper investigation is needed..”

Verified user

Developer at a healthcare company with 1,001-5,000 employees

[Read full review](#) 

“I am satisfied with Check Point WAF (formerly CloudGuard WAF) customer support. They have a dedicated Tactics and Operations Center (TAC) team with service level agreements in place. We typically receive business hours or 24/7 support depending on our license level..”

SreejeshSoman

Technical Consultant at Vertex Techno Solutions (B) Pvt Ltd

[Read full review](#) 

“My impression of technical support for Check Point WAF (formerly CloudGuard WAF) is that it is adequate. The technical support team is really good.

“If I were to rate support from zero to ten points, I would give them a ten, as they are the best..”

Bala_Krishna

Director at esupport Solutions Pvt Ltd

[Read full review](#) 

“When I raise any TAC ticket for Check Point WAF (formerly CloudGuard WAF), I am satisfied with their points and their support, as I am receiving immediate responses from the TAC. I can easily rate their support for Check Point WAF (formerly CloudGuard WAF) an eight out of ten.

“An incident occurred regarding the Global Accelerator movement from CloudFront to Global Accelerator, and for that, it took one week to respond, which was delayed by five days..”

Babu K

Senior Technical Engineer at a outsourcing company with 1,001-5,000 employees

[Read full review](#) 

Other Advice

“My advice to others looking into using Check Point WAF (formerly CloudGuard WAF) is that if an organization has a good budget, they can surely go with Check Point WAF (formerly CloudGuard WAF); otherwise, if the budget is low, they can explore other options, although security-wise, it is a good WAF. I would rate this product a 7 out of 10..”

Sachin Verma

Sr. Network and security Engineer at a outsourcing company with 201-500 employees

[Read full review](#) 

“My advice to others looking into using Check Point WAF (formerly CloudGuard WAF) is that it is good software for organizations, and I will give positive advice to others looking for Check Point web software.

I have no additional thoughts about Check Point WAF (formerly CloudGuard WAF) before we wrap up. It is very good software and I am currently using it. I will give this product an overall rating of 10..”

MANOJCHOUDHARY

MANAGER IT at Axis Bank

[Read full review](#) 

“Nothing would make Check Point WAF (formerly CloudGuard WAF) closer to a 10 for me since a 10 would mean preventing against all attacks, which is why it cannot receive that rating; nothing can prevent every attack.

“I would advise others looking into using Check Point WAF (formerly CloudGuard WAF) to take an evaluation license and try it first to understand how it works, and then try it again to form a final opinion about whether they are going to purchase it. This way, they can see if it fits within their current setup. I would rate this product an 8 out of 10..”

Eslam Osama

security consultant at a tech vendor with 10,001+ employees

[Read full review](#) 

“I would recommend clearly defining your application and API security requirements before implementation and spending some time tuning the policies for your specific traffic. Check Point WAF (formerly CloudGuard WAF) is a good fit if you need strong protection with centralized visibility, but make sure the team is comfortable with the configuration and ongoing rule tuning.

“My experience with Check Point WAF (formerly CloudGuard WAF) has been positive overall. The combination of protection, visibility, and application-specific policy control has been useful for my environment. The main areas I would see improved are a simpler configuration, troubleshooting, and more detailed documentation. I would rate this solution an 8 out of 10..”

Verified user

Developer at a healthcare company with 1,001-5,000 employees

[Read full review](#) 

“I did not have new features or functionalities that I have used recently in Secure Firewall. Check Point WAF is used in my company and my customers are using it. I have seen measurable business and security outcomes since implementation of [Check Point WAF \(formerly CloudGuard WAF\)](#). All vendors design firewalls with

application filtering. As per current incident reporting, we implement and update our feature updates and security databases. These databases are updated regularly. [Check Point WAF \(formerly CloudGuard WAF\)](#) works fine for every product like Cisco, Check Point, Fortinet, and Palo Alto. I am currently not using Check Point WAF as a primary solution, just for a specific purpose. Check Point WAF (formerly CloudGuard WAF) is working fine and reports, detects, and stops attacks such as IPS and detection. I would rate Check Point WAF (formerly CloudGuard WAF) a nine out of ten. The existing features are working fine, but new day-to-day attacks and issues arise in the environment globally, dealing with attacks such as phishing and DDoS attacks daily. Check Point WAF (formerly CloudGuard WAF) could improve by addressing the new day-to-day attacks and issues that arise in the environment and globally dealing with attacks. I have been satisfied with pricing, technical support, and performance. I am a customer of Check Point. I have been working in this field for several years. My overall review rating for this product is ten..”

Verified user[Read full review](#) 

System And Network Administrator at a tech services company with 51-200 employees

“For assessing Check Point WAF (formerly CloudGuard WAF) for preemptively blocking zero-day attacks and detecting hidden anomalies, we particularly use CrowdStrike for that function, as we detect using CrowdStrike, and there is not much on Check Point WAF (formerly CloudGuard WAF)'s side.

“For [ZTNA](#), I can maintain a [ZTNA](#) using certain MFAs or enabling certain network controls, so on the ZTNA side, it performs well.

“Regarding integration, how Check Point WAF (formerly CloudGuard WAF) and firewalls integrate with my existing systems, I find the integration with third parties straightforward as I have not encountered challenges, complexities, or needed to work on or enable anything there.

“I do not find any challenges with the ongoing management of Check Point WAF (formerly CloudGuard WAF), so maintenance is very smooth, and I do not face any issues with that.

“I purchased Check Point WAF (formerly CloudGuard WAF) through a vendor, not directly through Check Point Technologies.

“Given my experience with Check Point WAF (formerly CloudGuard WAF) and other technologies, I recommend Check Point WAF (formerly CloudGuard WAF). I would recommend it primarily for its scalability, which is very easy to scale, and the integration capability, as we can integrate it easily with systems like Splunk or any other [SIEM](#) devices. My overall review rating for Check Point WAF (formerly CloudGuard WAF) is 8.5 out of 10..”
