Product Recap

Infor CloudSuite

Infor CloudSuite Recap

Infor CloudSuite provides robust ERP and manufacturing features, seamless Microsoft integration, and automation of document management. It enhances compliance, scalability, and visibility, supporting industrial applications for planning and efficient IT management.

Infor CloudSuite offers an integrated suite that automates key business processes while providing advanced scheduling and analytics tools. The interface simplifies usage, while the strong planning and BOM management enhance operational efficiencies. Its cloud-based architecture minimizes IT overheads, supports global operations, and caters to discrete manufacturing needs. However, there are areas for improvement such as documentation, integration, reporting capabilities, and customization challenges. Users also note pricing concerns, particularly in certain regions, alongside the need for better resource availability, enhanced service, and industry-specific functionalities.

What features make Infor CloudSuite stand out?

- **ERP and Manufacturing:** Comprehensive tools for effective manufacturing operations and ERP tasks.
- **Microsoft Integration:** Seamless use with Microsoft tools enhances productivity.
- **Document Automation:** Efficient document management through automation.
- **Analytics Dashboards:** In-depth insights provided by robust analytics tools.
- **Planning and BOM Management:** Strong industrial planning and BOM support.

What benefits should users consider in reviews?

- **Scalability:** Supports growth and adaptation to changing business needs.
- **International Operations:** Facilitates global business processes and communication.
- **Reduced IT Overheads:** Cloud-based structure cuts down IT infrastructure costs.
- **Compliance and Visibility:** Enhances regulatory compliance and operational transparency.

Infor CloudSuite is deployed across industries like industrial engineering, retail, aviation, automotive, electronics, and logistics. It supports activities such as discrete manufacturing, bookkeeping, warehousing, and ERP tasks. Companies benefit from its capabilities to handle production, subcontracting, CRM, invoicing, and supply chain management, making it highly flexible and capable of addressing industry-specific demands.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

“Infor CloudSuite is a kind of ERP that is suitable for a medium or small discrete manufacturer, especially in the health sector, life sciences, and biotechnologies.”

Adeel Ansari

Project Manager, Program at SPTLabtech

“What I appreciate most about Infor CloudSuite is the out-of-box standard functionality; it really can function to meet the needs of any company.”

Randall Gatson

Sr ERP Support Analyst at a university with 201-500 employees

“It offers a facility to get data quickly.”

Nuno França

Executive Director at Onsearch

“The employee interface, specifically the UI, is one of the most valuable features in Infor CloudSuite, and after implementing it, I have seen numerous improvements in the UI space, including simplified navigation that has become easier with every CU, which is positive.”

KabilanChakravarthy

HCM Consultant at a healthcare company with 10,001+ employees

“Infor CloudSuite offers a comprehensive solution with integrated business intelligence and artificial intelligence capabilities.”

Dietmar Müller

Key Account Manager at Cronon GmbH

“From a product perspective, it's more lenient and suitable for using features in finance, such as reconciling our payments, accounts payable, accounts receivable, etc.”

S Solomon Kumar

Head of Global Sales at phaxon services pvt ltd

“The customization capabilities of CloudSuite Industrial are also there.”

Sandra Strydom

Presales Consultant at iOCO Software Distribution (Pty) Ltd (Infor Gold Channel Partner)

What users had to say about valuable features:

“It offers a facility to get data quickly. We handle approximately 500 to 600 orders per day, and the product is excellent for extracting and implementing solutions to check various parameters like client credit status. It is very easy to configure facilities to extract orders and adjust solutions to business needs..”

Nuno França

Executive Director at Onsearch

[Read full review](#) 

“Infor CloudSuite offers a comprehensive solution with integrated business intelligence and artificial intelligence capabilities. It does not require hardware or extensive IT expertise, which are standard advantages for cloud solutions.

Its integration capabilities with Microsoft features are notable. Additionally, it is a highly scalable and stable solution, useful for large enterprises engaged in international business. It is also easy to maintain compared to other ERP solutions..”

Dietmar Müller

Key Account Manager at Cronon GmbH

[Read full review](#) 

“What I appreciate most about Infor CloudSuite is the out-of-box standard functionality; it really can function to meet the needs of any company.

“Using Infor CloudSuite has helped with compliance as I have encountered many companies going the route of SOX compliance.

“I have utilized the industry-specific functionalities of Infor CloudSuite, which have given me a better understanding of how the ERP system can work in regards to my sectors..”

Randall Gatson

[Read full review](#) 

Sr ERP Support Analyst at a university with 201-500 employees

“The employee interface, specifically the UI, is one of the most valuable features in Infor CloudSuite. Infor OS enables us to plug in third-party payroll and third-party applications. The latest talent acquisition where workflow can be defined in the UI itself by functional consultants without IPA interventions is beneficial.

I would assess the impact of Infor CloudSuite's industry-specific features on my organization's operational efficiency as very good from the organization's perspective.

After implementing Infor CloudSuite, I have seen numerous improvements in the UI space. They have simplified the navigation. The navigation has become very easy, starting with administrator navigation and simplified menus. It is becoming simpler with every CU, which is positive..”

KabilanChakravarthy

[Read full review](#) 

HCM Consultant at a healthcare company with 10,001+ employees

“My customers belong to the manufacturing industry. Infor CloudSuite comprises core ERP applications, and apart from that, it is bundled with analytics tools, social collaboration tools, document management tools, and barcoding solutions like Infor Factory Track. If we specifically speak about Infor CloudSuite, I have to talk about the core ERP functionalities and modules and then the other features, like social collaboration tools, documentation, alerts, and workflows.

If I focus more on the ERP part, Infor LN is a tool that is very strong in the manufacturing domain. There is a manufacturing module that is very strong in terms of automation or features. Any complex situation can be handled. For any discrete manufacturing organization or industry, Infor LN can be implemented to manage the core manufacturing module, which is flexible, and ready to be tailored by mapping the business for any manufacturing industry. Within the ERP manufacturing module, we have revision control. We have a project management module and a sub-module. We have shop floor control and job floor controls, which are the dropdowns of the manufacturing module..”

[Read full review](#) 

Infor Ln Manufacturing Consultant at a tech vendor with 51-200 employees

“Infor CloudSuite is a kind of ERP that is suitable for a medium or small discrete manufacturer, especially in the health sector, life sciences, and biotechnologies. My experience with Infor CloudSuite is that it provides the basic features for any manufacturer who is looking into implementing an ERP solution out of the box and has a system that works. There are no defects or bugs, and it comes with implementation accelerators. So, if any company is interested in getting a good investment, Infor CloudSuite with implementation accelerator could be a better option. Any organization that is a discrete manufacturer finds Infor CloudSuite to be a good fit for the requirements that manufacturers usually have.

“Infor CloudSuite made a difference for a manufacturer I worked with through an end-to-end implementation. One example is that once there is a customer order on SyteLine, that customer order gets picked up by advanced planning and scheduling. This is a firm demand, and there can also be soft demand based on parameters such as safety stock and reorder point. Infor CloudSuite has a smart, advanced planning and scheduling system that takes into account both types of demand, processes those demands, and comes up with supply suggestions. These suggestions are reviewed by the planners, and once they are happy, they release the plan for production or the shop. Then, once the plan is released, the job order at the shop floor gets completed, and if we have established a link with the customer order, the customer order gets automatically updated with the status to be shipped, eligible for shipping. By integrating the upstream processes with the downstream, that has really helped one of the organizations I implemented this process in their overall process efficiencies. That's a great example of an end-to-end integrated solution.

“I have seen specific improvements after implementing Infor CloudSuite, such as reduced processing time and better visibility. In terms of the previous legacy system, it did not have the modern technology that the latest ERP system provides. The processes were clunky, requiring downloading and sending documents to customers or suppliers. With Infor CloudSuite, you can manage and maintain document profiles. With this feature, you can automate the dispatch of your documents either to customers or suppliers, significantly cutting down the admin time for your order processing team or procurement team. Previously, they would spend ages retrieving documents from emails and trying to find the relevant

third party to send them to. But now, this is completely automated, enhancing the overall processing time and user experience.

“I can provide rough estimates on time saved after implementing Infor CloudSuite. Users can generate documents in a matter of seconds now, compared to the previous minutes they took. If we imagine creating ten orders, and previously the legacy system required spending five minutes per order, that totals fifty minutes. However, in the new system, with properly automated document management, it only takes about one minute for each order. Therefore, you end up saving around forty minutes for ten orders raised..”

Adeel Ansari

Project Manager, Program at SPTLabtech

[Read full review](#) 

Other Solutions Considered

“I have not previously worked with different solutions or any competitors of Infor CloudSuite since I started with Infor CloudSuite and only know this solution..”

KabilanChakravarthy

HCM Consultant at a healthcare company with 10,001+ employees

[Read full review](#) 

“While I haven't directly worked with similar ERP solutions, I have experience with local IT vendors and have found them to be challenging to work with in the past. In terms of drawbacks, I find other ERP solutions too complex and cumbersome to handle due to excessive procedures and evaluations.

.”

Verified user

Managing Director at a manufacturing company with 11-50 employees

[Read full review](#) 

“Infor CloudSuite was the main go-to solution; we evaluated Oracle and other ERP systems that did not have the capabilities we were looking for.

“The main differences between Oracle or SAP were regarding customization, which played a key part in our choice of Infor CloudSuite..”

Randall Gatson

Sr ERP Support Analyst at a university with 201-500 employees

[Read full review](#) 

ROI

Real user quotes about their ROI:

“Mainly, we pushed back a \$7M plant expansion because we were able to increase throughput with our existing facility. We will still build the new lines eventually, but we're looking back at how we designed it now that our workflow is different. .”

Gene Hammons, MBA

Director at a consultancy with 1-10 employees

[Read full review](#) 

Use Case

“We use it for manufacturing customers – companies who do a lot of manufacturing. There are also some logistics companies. Those are the main areas we focus on. .”

Sandra Strydom

Presales Consultant at iOCO Software Distribution (Pty) Ltd (Infor Gold Channel Partner)

[Read full review](#) 

“Infor CloudSuite Industrial is an ERP software designed to be used in industrial engineering and for retail, representing trading purposes. It's also useful in aviation, aerospace, automotive, and other industries, including high-tech electronics..”

S Solomon Kumar

Head of Global Sales at phaxon services pvt ltd

[Read full review](#) 

“We use Infor CloudSuite for clients in industrial applications, primarily to meet needs in production and finance. It provides solutions for intercompany business across multiple countries, making it essential for our operations..”

Dietmar Müller

Key Account Manager at Cronon GmbH

[Read full review](#) 

“I have taken care of the tool's two full cycles of implementation. My company deals with discrete manufacturing companies, such as industrial equipment or industrial engineering equipment. Basically, the tool is used for any industry associated with discrete manufacturing and if our company is associated with implementing the tool..”

Verified user

Infor Ln Manufacturing Consultant at a tech vendor with 51-200 employees

[Read full review](#) 

“CloudSuite Industrial is primarily used by small and medium-sized businesses (SMBs) within the manufacturing sector. Compared to other ERPs, it offers approximately 95% more functionality explicitly tailored for industrial manufacturing. This ERP excels in size, functionality, and feature richness, making it a smart choice for SMBs..”

Haridas Narayanan

Director, Consulting Services at Blue Chip Computer

[Read full review](#) 

“I can highlight a couple of other scenarios regarding my main use case or how I've implemented Infor CloudSuite. One is Infor Document Management, which I've seen in the past with other ERP systems that haven't involved as much, but Infor CloudSuite does give you an extra edge when it comes to managing customer invoicing, purchase orders, or customer order acknowledgements. Infor Document can be configured by your IT or super key users, so whenever you produce these documents, they automatically get attached to the actual orders. If it's a customer order verification, as soon as you produce that document, it is attached to that particular customer order, and anybody who wants to retrieve that document can easily access it from the customer order form. It is easily configured and appears as a widget. That's a great feature to have.

“Another great feature in Infor CloudSuite is the in-built workflows, which can produce user alerts. For instance, if there is a purchase order that needs workflows, they can be set in place and configured to send alerts to the approvers. These are a couple of examples that I can highlight, which enhance the user experience in my opinion..”

Adeel Ansari

Project Manager, Program at SPTLabtech

[Read full review](#) 

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“The initial setup was difficult and not easy. It was a challenging task to implement at the beginning, which impacts the rating I gave, a five out of ten..”

Nuno França

Executive Director at Onsearch

[Read full review](#) 

“The Infor team creates the instance, so the initial setup is straightforward. For a mid-sized organization, the software would be deployed in a maximum of three months..”

Joshua Rajeeva

Managing Director & CEO at Blue Chip Computer

[Read full review](#) 

“The initial setup is easy, as we have worked with the product for almost 27 years. I rate its process a nine out of ten. It takes months to complete due to the complex system..”

Chandana Wijeratne

[Read full review](#) 

Director at Kingslake Eng.Systems (Pvt) Limited

“The solution's initial setup is straightforward. It takes a day to install. Although, the module-wise implementation might take a couple of months to complete..”

Joshua Rajeeva

[Read full review](#) 

Managing Director & CEO at Blue Chip Computer

“The initial setup is straightforward and takes four to six months to complete. There's no complexity in setting up this system. It is very user-friendly. They're flexible in customization compared to tier-one ERPs like SAP, which are inflexible when making changes. You can easily customize it if you know a bit of coding about .NET. You don't need to be an expert if you have some basic ideas.

Infor CloudSuite Industrial involves five primary phases: inception, elaboration, instruction, transition, and optimization. In the inception phase, you gather requirements and create a Proof of Concept (POC) to encapsulate these requirements in a smaller model. Subsequently, you present this model to users, provide training, and identify process gaps. A conference room pilot is conducted to pinpoint issues or additional requirements, which are then integrated into the system. The process continues with user acceptance testing and data conversion, and finally, the system goes live. This deployment method within Infor CloudSuite Industrial is adaptable and can be tailored to suit the size or complexity of your project.

I rate the initial setup a seven out of ten, where one is difficult and ten is easy..”

Haridas Narayanan

Director, Consulting Services at Blue Chip Computer

[Read full review](#) 

“The product's initial setup phase is very easy. Once a partner subscribes or procures licenses, as it is a cloud-based solution, you will be directly given a link or a URL where all the parameters for a basic company setup will already be done. Initially, there is always a golden company or a vanilla company where all the parameters are already set, and all the basic master data is already set. The customer has to go and start using the application from Infor for testing, and then implementation partners will come into the picture and schedule the customer's requirements. Based on the categories sixty, twenty, and ten categories, users will amend or modify the processes. During implementation also, there is something called implementation accelerators, which is one of the features Infor is providing for role-based processes, which were already defined. For example, if you are a warehouse clerk, if you are a production manager, what screens, what data, and what sessions are you going to use, sessions will be already bundled under that role or profile. The data will already be presented as basic master data and parameters; we will be already presenting. Role-wise, data and parameters are already there. Role-wise sessions are already a part of the implementation. There is no need to configure it, but for the vanilla company, everything is preconfigured. The process is preconfigured. What sessions we need to work on are preconfigured, and what role you have worked on is configured. The master data, the parameters, and the setup are already pre-configured using the implementation accelerators.

Once the licenses are put in place, I think it'll take hardly two or three days to position that particular customer. The only thing is that based on the module's bifurcation and the implementation part, I think it will take less than a day to implement..”

Infor Ln Manufacturing Consultant at a tech vendor with 51-200 employees

Customer Service and Support

“Technical support is rated a seven out of ten. Here in Portugal, there's no direct support from Infor. For major problems, we need to consult other partners..”

Nuno França

Executive Director at Onsearch

[Read full review](#) 

“The technical support has improved significantly. When I started with the Manila team in the early days, it was average, but now the support is very good.

I would rate their technical support eight out of ten..”

KabilanChakravarthy

HCM Consultant at a healthcare company with 10,001+ employees

[Read full review](#) 

Customer Service:

Infor is impossible, but if you have a good reseller partner, they can handle just about any issues.

Technical Support:

Very good with the reseller. .”

Gene Hammons, MBA

Director at a consultancy with 1-10 employees

[Read full review](#) 

“The customer service and support is good. It's called Extreme Support, and it comes with an add-on for customers to raise tickets and exchange information. The response time is based on the complexity of the issue and is connected to the customer. The issue will be escalated to us, and based on the customer's approval, the ticket will be closed. Extreme Support has been successful globally for Infor CloudSuite Industrial, and it's considered very good in terms of technical support and functionality..”

S Solomon Kumar

Head of Global Sales at phaxon services pvt ltd

[Read full review](#) 

“Support has been a concern since around 2011 or 2012. The offices in Bangkok or Singapore struggle to comprehend the complex taxation. While our needs might be intricate, customers expect comprehensive support when paying for it. The support provided fell short, resulting in a very frustrating experience.

Instead of directly addressing the issue, they often responded by stating that the problem wasn't inherent to the product but considered it an enhancement. They would advise us to log an enhancement request, promising to consider it if deemed valid, essentially deferring the problem for future resolution..”

Haridas Narayanan

Director, Consulting Services at Blue Chip Computer

[Read full review](#) 

“Though the solution's technical support is available for us and provides prompt services if there are any extensions, there is no support. There is ten percent of uniqueness we need to address in the tool in terms of customizations. In terms of customizations, one can tweak or add extensions. We will extend the solution to meet the customer's needs. If the standard solution is also not working, and if Infor's extension is there, the support doesn't support it because an extension has been added. Sometimes the standard core application will not work and it might be because of customization. In the aforementioned case, the support won't touch the tickets related to extensions. When providing knowledge with support, the support team needs to improve in terms of guiding the users or customers on how to investigate or address the issues related to the solution. The support team doesn't give the steps to rectify the issues in the solution. For example, if they are unable to do a purchase order Infor, let us say they will say you have to maintain it. They won't elaborate on their response. They should improve in providing the solution with the plan. I rate the technical support a seven out of ten..”

Verified user[Read full review](#) 

Infor Ln Manufacturing Consultant at a tech vendor with 51-200 employees

Other Advice

“I don't have much experience with artificial intelligence integration as it's relatively new in Infor CloudSuite. I would rate Infor CloudSuite a nine out of ten.

Overall, I would rate the solution nine out of ten..”

Dietmar Müller

Key Account Manager at Cronon GmbH

[Read full review](#) 

“It's pretty good. Overall, I would rate it an eight out of ten. There's always room for improvement, but it works well.

I would recommend using it. It's reliable, stable, and has good features that most companies need. It works well in various business environments and expands easily from small to large companies. It generally accommodates most process flows in the companies. .”

Sandra Strydom

Presales Consultant at iOCO Software Distribution (Pty) Ltd (Infor Gold Channel Partner)

[Read full review](#) 

“I have experience with Infor Syteline, which is also referred to as Infor CloudSuite Industrial.

“I have not used Infor CloudSuite's advanced analytics features, but I have heard a lot about them.

“The data feature for my organization is very pertinent to making sure that data is either migrated or input into the system correctly.

“Using Infor CloudSuite versus any other ERP system allows the company to customize the system in regards to what they are looking for.

“I rate Infor CloudSuite 8 out of 10..”

Randall Gatson

Sr ERP Support Analyst at a university with 201-500 employees

[Read full review](#) 

“I have not used or heard of AI in the tool. I think Infor is working on it, but I think it is not open for channel partners or users at the moment. I have not used or been introduced to AI in Infor.

For data analytics, Infor has another product called Infor Birst, which is a business analytics tool that is easy and simple and where it is possible to pull the data from the database. We can see the data in the graphical representation, like bars, bar diagrams, pie diagrams, or something like that, and so, in that way, AI is integrated into the tool. The reports and dashboards are there in the AI. With the tool, you can pull the data from the database, and you can see the reports and dashboards in a visual representation. I can see that it is AI-integrated, but I have not used it completely. I just heard about it.

Manufacturing industry, especially the discrete manufacturing industry should use Infor CloudSuite. The manufacturing metrics can take a bit out of Infor CloudSuite in terms of manufacturing. They will get tremendous results because they allow us to configure complex business processes and infrastructure. We have alerts, workflows, analytics, and user-based rules. Reports and custom reports are easy, so there are multiple advantages. In terms of technology, AI, and core ERP solutions, I rate the tool an eight out of ten..”

Verified user

Infor Ln Manufacturing Consultant at a tech vendor with 51-200 employees

[Read full review](#) 

“I have not utilized the predictive analysis capabilities of Infor CloudSuite.

Infor CloudSuite's ability to integrate with third-party applications and existing legacy systems is good. There are some issues with ION, but within Infor applications, it works well. For third-party applications, we have used SFTP connections successfully. Seamless connections can be made with the Infor Cloud support.

My experience with the implementation of Infor CloudSuite is good. We could capture 70 to 80% of customer needs.

[Workday](#) and Oracle are currently moving faster in the market. This assessment is based on consultant requirements. The job opportunities for Infor CloudSuite consultants are limited. In India, Oracle and [Workday](#) are performing well in the market.

Infor needs to improve their marketing strategy. Other Infor products such as [Infor LN](#) and [Infor M3](#) are performing well. It would be beneficial for Infor to pitch HCM to those customers with attractive discounts to capture market share. Customers transitioning from on-premises or Lawson to Infor CloudSuite should not face high charges. The migration from Lawson to Infor CloudSuite should be treated as a migration project rather than a new implementation.

I have also worked with [Infor ION](#), which is a good tool for integration purposes, though only Infor consultants can work on it. My company uses ION for integration, and I receive positive feedback from the technical team. I personally work with CloudSuite and an older on-premises system.

I rate Infor CloudSuite eight out of ten..”

KabilanChakravarthy

HCM Consultant at a healthcare company with 10,001+ employees

[Read full review](#) 

“As a part of Infor CloudSuite implementation, I think at the end of the day, it is a tool, but it gives the best results if we have robust processes implemented. For instance, if we are talking about planning, then the results or outcomes we get from APS or production are totally dependent on how accurately we maintain data in CloudSuite. It's data-hungry, and we have to have robust and rigorous processes in place to support master data management because this feeds into your planning and processes since it's a highly integrated solution. One wrong data point can jeopardize the outcome, and users can spend hours trying to fix that. In my opinion, it's a great tool, but any organization looking to implement Infor CloudSuite or any other ERP needs to ensure they have defined roles, responsibilities, and processes around master data to feed good, accurate, and quality data into the system. When I implement Infor CloudSuite as a project manager, I overemphasize this and reiterate to the main sponsors and stakeholders that this is paramount to getting the best results out of Infor CloudSuite implementation.

“It's difficult to rate Infor CloudSuite precisely; it depends on each organization's requirements. If you are a mid-size or small to medium-sized manufacturer with discrete processes to implement, I would rate it a six out of ten. It provides out-of-the-box, ready-to-use processes.

“The main reason I give a six out of ten rating is primarily due to the strengths we've discussed earlier. The implementation accelerators provide an easier and faster way to implement Infor CloudSuite and obtain a quick return on investment for organizations. It has a depth of features for discrete manufacturing. However, if you are looking for complex scenarios or processes, Infor CloudSuite might require some customization, which can become expensive. While it caters well for out-of-the-box solutions with foundational processes, it may necessitate exploring other Infor products if you need to automate factories or warehouses.

“My advice for anyone considering Infor CloudSuite is to focus on a few key areas during their implementation. This is a solid and robust product, but it's essential to look closely at the design phase. Ensure you have your SMEs identified and dedicated, documenting the blueprint properly to understand what works out of the box and what the gaps are. Set the right expectations; you should enter the construction phase of the solution with a clear understanding of what is standard

and what requires customization. It's also crucial to conduct thorough research when selecting the right partner, as not everyone in the market has full knowledge of how Infor CloudSuite works. I would rate Infor CloudSuite a six out of ten overall..”
