Product Recap

LastPass Business

LastPass Business Recap

LastPass Business enhances enterprise security with features like password sharing, user deactivation, and login control. Integrated with Active Directory, it ensures password management through a security dashboard, multifactor authentication, and YubiKey support.

LastPass Business provides comprehensive password management by supporting secure storage, shared folders, and master passwords for streamlined access. With an enterprise admin console and robust reporting tools, it efficiently manages credentials. It supports secure storage for procedures and notes, crucial for IT departments. Improvement areas include group inheritance, admin capabilities, and automated password rotation. Issues like URL recognition, plugin stability, and user access reporting need addressing. Enhancements in mobile app navigation and technical support are also needed, alongside increased customization and authentication options.

What are the key features of LastPass Business?

- Password Sharing: Allows secure credential sharing among team members.
- User Deactivation: Easily manage and deactivate user access.
- Multifactor Authentication: Enhances security with additional authentication methods.
- Security Dashboard: Provides insights into password health and security scores.
- Integration with Active Directory: Facilitates user management and credential syncing.
- Enterprise Admin Console: Centralizes admin controls for credential management.

What benefits should users expect when evaluating LastPass Business?

- Enhanced Security: Multifactor authentication and secure storage protect sensitive data.
- Improved Access Management: Streamlines login processes and improves control.
- Efficient Credential Management: Simplifies admin tasks with reporting tools.
- Collaboration Support: Securely shares credentials among employees and contractors.
- Reduced Security Risks: Encourages complex password adoption and reduces simple password reliance.

In specific industries, LastPass Business is implemented as a vital tool for storing and synchronizing encrypted credentials, supporting robust password policies, and facilitating secure access control management. Organizations benefit from storing shared accounts and managing core enterprise admin passwords, promoting higher security standards across users and applications.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

- ✓ “LastPass Business is a very comprehensive and easy-to-use password management solution that any business should adopt, especially if they want to secure their accounts and improve their security on their business applications and accounts.”

John Lewis

Senior Software Engineer at EY

- ✓ “My advice to others looking into using LastPass Business is that it is a platform that has saved us time, cost, money, and most importantly, it has given us peace of mind.”

Charles Nielson

Business Development Manager at ISC

- ✓ “LastPass Business is a great tool that is easy to use and has really helped to increase security, especially for remote workers.”

Shamrock Rudman

Digital Marketing Manager at Nestle

“LastPass Business has positively impacted my organization by making it more secure for critical applications and providing better visibility into weak passwords in use by department users, although the admin portal needs some work.”

Michael Albert

Senior Software Engineer at GPA

“LastPass Business has positively impacted my organization by being an ideal tool for our company, giving us peace of mind with secure, easy-to-use password management for all our staff, significantly reducing security breaches and saving time by cutting password resets by forty-five to fifty percent.”

Teddy Jakes

Finance Manager at Saint-Gobain ADFORS CZ s.r.o.

“LastPass Business has positively impacted my company not only by saving my technical time and allowing my team members to service more customers, but because of this, my company is able to save on the number of techs we need to employ, hence fewer employees are needed.”

David Lawrence

Technical Service Specialist at PwC

“The most significant impact is that LastPass Business has positively impacted my organization by dramatically increasing our security from 40% to 60% since we now have fewer data breaches and less concern about security.”

Sospeter Martin

Human Resources Manager at Dow

What users had to say about valuable features:

“The best features LastPass Business offers include managing the number of users that have access to a credential, the browser plugin, password management, multi-factor authentication, and security policies.

The feature that has had the biggest impact on my workflow is that LastPass Business works well as a password manager. It is so much better than having staff store passwords on paper. It can get things done quickly, especially through sharing of logins. We are able to collaborate on different projects or tasks easily.

LastPass Business allows me to save passwords and lock access via MFA. It also monitors the dark web for compromised accounts..”

Teddy Jakes

Finance Manager at Saint-Gobain ADFORS CZ s.r.o.

[Read full review](#)

“In addition to training and security standards in the organization to protect the privacy of personnel, LastPass Business helps our employees by keeping their passwords in a secure environment and intelligently announces change reminders when needed, allowing passwords with secure protocols. I appreciate it because it is very easy to access, it saves time, and full control over managing access usernames and passwords is now much easier, with everything stored on the cloud platform as encrypted.

“Also, the centralized management of users is good, with complex multi-factor support, great customer support, and hardened passwords.

“The IT manager uses LastPass Business to manage access levels by having access to all the accounts and being able to access all the devices, which means more security in the organization.

“I appreciate the MFA feature, and I think it is the most intelligent and secure feature, which might be great for any business wanting to improve security in their organization..”

Michael Albert

Senior Software Engineer at GPA

[Read full review](#) 

LastPass Business helps to create and save new passwords for any sort of logging you can think of. It is incredibly easy to share access without sharing passwords. It is incredibly easy to revoke access when someone does not need it anymore or if you do not want them to have it. It saves time. I do not have to remember all the passwords, just one master password for LastPass Business.

All of the features of LastPass Business are very important because they are very secure. It solves most of our information technology and cybersecurity issues.

“I love LastPass Business because it has a vault that saves and stores organizational-wide credentials. It saves time from having to ask a coworker for their login information. It takes the stress out of worrying about internet security related threats because it is very secure.

“LastPass Business has saved a lot of time when onboarding new staff and providing them with access to our login information for particular accounts. It has saved us about fifty to fifty-five percent of our time because we can share our credentials securely. Password security is vital, knowing that as a business, we can change passwords at a moment's notice without impacting the whole company. We can have access to LastPass Business on multiple devices on the go, promoting collaboration. .”

Jennifer Lopez

Java Software Engineer at Capgemini Engineering

[Read full review](#) 

“The best features LastPass Business offers include keeping great notes, sharing passwords effectively and securely, and generating new passwords easily. I love the Chrome extension for easy account logging and for saving new account passwords, and two-factor authentication. Synchronizing between devices is perfect.

The Chrome extension for easy account logging and for saving new account passwords has been very easy and straightforward. I do not have to remember all the passwords. I just have to come up with one to log in using one password, and I am able to log into all the applications or the accounts, thereby saving a lot of time. It helps to synchronize between devices, making sharing data so flawless and easy.

Protecting passwords and thereby protecting data is top-notch. Speeding up the logging processes at various sites for users reduces password reuse and increases the likelihood of password changes on a routine schedule. It is great.

Since I started using LastPass Business, everything has been positive because I have seen an increase in data protection. I have seen an increase in collaboration through password sharing. I have saved time through faster logins.

My security has increased from 40 to 55 percent through the robust data security features that LastPass Business offers. Collaboration has really been boosted in my organization because I can share passwords securely, thereby working on documents or projects easily..”

Trevis Carter

Technical Support Engineer at Capgemini

[Read full review](#) 

“I appreciate the authentication policy of LastPass Business because it is quite simple and easy to use.

“LastPass Business allows me to build powerful passwords by keeping me informed regarding its strength, and it has lessened my concerns to a great degree since it is secure and shields all of my personal information effectively.

“Autofilling in forms and apps works well on phones, and generating a secure password and automatically passing the information on the page to store the credential securely is beneficial.

“Decreasing the risk of brute force attacks by extending passwords and adding more complexity is valuable.

“Sharing of the password for easy collaboration is beneficial, and ease of use is notable regarding features such as the password strength indicator and autofilling, as they impact my daily workflow positively.

“The most significant impact is that LastPass Business has positively impacted my organization by dramatically increasing our security from 40% to 60% since we now have fewer data breaches and less concern about security.

“Through increased security in advanced passwords, faster processing of work with autofill saves time from looking up passwords. Better control over user access to a stored password after termination is valuable.

“We have been able to save a considerable amount of time with LastPass Business, as autofill saves approximately 30% of time from looking up passwords..”

Sospeter Martin

Human Resources Manager at Dow

[Read full review](#) 

“LastPass Business is a seamless password management tool. Now we use it across the company and it helps streamline the storage and retrieval of the myriad of passwords that we all encounter on the web these days, making it easy to share across accounts and help individuals get access to the passwords they need to do their jobs quickly and easily.

“It is a better alternative than having to remember passwords or write them down on Post-it notes, especially as most of our staff has transitioned to remote work. It solves most of our information technology and cybersecurity issues.

“LastPass Business does a good job of organizing passwords and making it easy to share some and not others. I have a personal and a company LastPass Business account, and it is seamless to shift between them. The website autofill integration is great and makes logging into sites a breeze.

“Autofill helps us log in seamlessly to various apps where we do not have to remember the password; it automatically autofills the password and we are able to log in, saving a lot of time.

“LastPass Business has a good structure to manage different departments' passwords and suggests strong passwords when setting up new accounts. It allows users to not have to remember the password since it is saved securely. It has a Vault that saves and stores organization-wide credentials. I love that because it is very secure and saves time from having to ask a coworker for their logging information. We are able to share that information and remotely collaborate easily.

“It has increased our security by 40 to 55 percent because LastPass Business has a Vault that saves and stores organization-wide credentials where it is very secure and easy to access. It saves time from having to ask a coworker for their logging information, takes the stress out of worrying about internet security and related threats, and helps make the onboarding and offboarding process easier for the HR and OPS teams with little concern for employees changing logins and little to no worry about data breaches and other security issues.

“Since we deployed it, we do not have to waste time logging into multiple apps in

my organization. It makes it very easy for new hires to be able to log in to multiple apps within LastPass Business, saving a lot of time.

“LastPass Business is deployed in my organization as a Hybrid Cloud..”

John Lewis

Senior Software Engineer at EY

Other Solutions Considered

“We were looking at Symantec. We are a Symantec client, that's why we are looking at them, but we felt LastPass offered more significant value for the money.
.”

Validated user

Assistant Director of Technology Support at a university with 1,001-5,000 employees

[Read full review](#) 

“We looked at a few products that were industry-specific, such as SCADA software, although these were not necessarily security products.

There was a security product that we reviewed, based on Active Directory, but for what it gave us, it was not a good value..”

Mike Klaus

Senior Systems Analyst/Administrator at a agriculture with 1-10 employees

[Read full review](#) 

“I previously used OnePassword and Bitwarden.

The reason we switched from Bitwarden to LastPass Business is that we originally chose LastPass Business for business due to its ease of use, simplicity, and its capability. It can be used anywhere, everywhere..”

Teddy Jakes

Finance Manager at Saint-Gobain ADFORS CZ s.r.o.

[Read full review](#) 

“I previously used Okta Identity Cloud.

“LastPass Business is very user-friendly and secure, very easy to use, cost-effective, and the support has always been top-notch. The Okta Identity Cloud has very complex security features that take time to learn about. Its user interface was not intuitive, and the support time takes a lot of days, like two to three days to respond to a certain query. Those were the reasons we switched from Okta Identity Cloud to LastPass Business..”

John Lewis

Senior Software Engineer at EY

[Read full review](#) 

“I have evaluated several password managers including Norton Password Manager, KeePass Password Safe, Dashlane, and OneLogin. The LastPass solution is the best one that I have tried.

The OneLogin solution comes to mind, as it has been hacked in the past. Because we cannot review or audit their code, we need to trust that they will make changes and update their product accordingly. There is always a worry, however, that something could go wrong. I am most comfortable with LastPass because of the support for the hardware security key.

Dashlane is a good solution, but I do not like the way it looks..”

Validated user

CEO at a legal firm with 1-10 employees

I previously used QuickBooks Online and Trello.

I switched from QuickBooks Online and Trello to LastPass Business because LastPass Business can easily scale with our needs. I only wish it was easier for users to review what folders they have access to. As you scale, you will want to ensure that you set up in an organized fashion, or it can feel unruly. It allows others to manage what they need to save, which saves you time in managing. It is also very secure, so we do not have to worry about data breaches. LastPass Business is very cost-effective, can be used by any size of organization, and is very easy to use, making it a good alternative to Trello and QuickBooks Online. .”

Jennifer Lopez

Java Software Engineer at Capgemini Engineering

ROI

Real user quotes about their ROI:

“I have seen a return on investment, as it has decreased the risk of lost digital assets, decreased IT management time by forty to fifty percent, and increased our security to forty-five to fifty percent..”

Teddy Jakes

Finance Manager at Saint-Gobain ADFORS CZ s.r.o.

[Read full review](#) 

“I have seen a return on investment as saving on checking the security status of users in maintaining their corporate username and password has reduced cost and time, improving security in my organization through the robust security features..”

Michael Albert

Senior Software Engineer at GPA

[Read full review](#) 

“I have seen a return on investment because since there are fewer incidents of security threats, it has reduced help desk support calls. It is a secured and automated way for logins and identity management, which leads to easier handling..”

Alice Mirii

Senior Software Engineer at Procter & Gamble

[Read full review](#) 

“A return on investment has been seen as reliance on insecure methods like shared spreadsheets and physical notes has been reduced, hence increasing security and reducing the time to action for emergency response..”

Shamrock Rudman

Digital Marketing Manager at Nestle

[Read full review](#) 

“I have seen a return on investment because I can share relevant metrics with you, such as fewer employees needed, money saved, or time saved. Money is saved because it is a very cost-effective password management manager. It has allowed us to securely store passwords, hence increasing my security in my organization..”

Charles Nielson

Business Development Manager at ISC

[Read full review](#) 

“I have seen a return on investment with LastPass Business. The tool is integrated with our Okta, so the MFA provides an extra layer of security to LastPass Business accounts. It has improved my password security management, and integration with Chrome or other browsers is very useful. It has saved time, hence fewer employees are needed. As I mentioned, it has positively impacted my company not only by saving my technical time and allowing my team to service more customers, but because of this, my company is able to save on the number of techs we need to employ..”

David Lawrence

Technical Service Specialist at PwC

[Read full review](#) 

Use Case

“My main use case for LastPass Business is that it is being used across the whole organization, helping us by unifying and centralizing password management for all our users. With users having more and more complex passwords, LastPass Business is a simple way to organize and manage passwords in my organization.

“A quick specific example of how I use LastPass Business day-to-day is the ability to combine personal and business websites' passwords into one central location, which is very nice and simple to use on mobile, especially with Face ID enabled..”

Michael Albert

Senior Software Engineer at GPA

[Read full review](#) 

“LastPass Business is a great tool overall; currently, mostly our IT department at my company uses it as we always had issues determining where to store secure passwords. Eventually, it is something we may even offer to end-users so they stop writing passwords on sticky notes. This is the main issue that LastPass Business addresses.

“We have also enabled stronger multi-factor access to those passwords that we have and created a central place to manage all of the passwords for our corporate technology team. I also love LastPass Business because it addresses weak and repetitively used passwords, enabling us to update them frequently..”

John Lewis

Senior Software Engineer at EY

[Read full review](#) 

I utilize LastPass Business across all our business and personal needs as well. It is a great resource for us. It helps us save time and money. We can authorize different people in our business and professional lives to have access to different programs we use. We can quickly give them access to things without giving them complete control. It has saved us time and improved our efficiency as an organization, and I cannot tell you how many hours it has saved by eliminating the need to remember or figure out passwords. It is a truly game-changer.

LastPass Business is the ultimate password manager, which allows us to share account sign-in details with others on our team without disclosing the username and password. As a group of team members using LastPass Business, we are able to share credentials with each other. We are then able to work on certain projects or tasks effectively without worrying about our security, thus promoting remote collaboration or team collaboration. .”

Jennifer Lopez

Java Software Engineer at Capgemini Engineering

[Read full review](#) 

“LastPass Business has increased security throughout my organization, and it is used by multiple employees to store credentials, which has allowed us to increase password requirements and mitigate the risk of brute force password attacks.

“We wanted to increase password length considerably, especially for admin capabilities, and by having the ability to autogenerate and store a secure password, we accomplished that through LastPass Business.

“I appreciate the ability to autogenerate random secure passwords that are much more secure than passwords users generate themselves, which allows my team to use LastPass Business for storing credentials and improving security. It also allows our organization to stop reusing admin passwords and assign unique passwords to every device and account..”

Sospeter Martin

Human Resources Manager at Dow

[Read full review](#) 

“My main use case for LastPass Business is the need to share passwords with different members of my team in a secure way. LastPass helps me to do that effectively. It is also great to be able to generate new passwords quickly that are secure and that can be saved in an encrypted database.

I utilize a multitude of websites for images, programs, designing, social media, and much more. There is no way that I want to use the same passwords for each of the hundreds of websites I use each day, and that is where LastPass Business has been a game changer. It is perfect for storing logins, payment information, and for two-factor authentication. I also love the Chrome extension; it makes it extremely easy to log into the accounts with just a couple of clicks of the mouse. The same goes for the app as well. It is very simple to use and uses face unlock to log into my apps. Sharing of passwords has been very easy. Within my team, we can create a group and share the logins, enabling us to collaborate on a document or a project easily.

LastPass Business is a great tool for teams who need to share passwords with each other in a secure manner. It is also great for generating new passwords..”

Trevis Carter

Technical Support Engineer at Capgemini

[Read full review](#) 

“My main use case for LastPass Business is that I log into countless applications and gateways. LastPass Business makes it so much easier to manage what I log into and those that need to be shared with my team members. I was managing the passwords with my browser prior to LastPass Business. After a breach happened, we needed a solution. While it did take some time to get used to, the ability to share logins and manage users was completely worth the learning curve. I could not work without it. At this time, I love it.

A specific example where LastPass Business made my life easier is that we have been able to share our logins and collaborate on different projects, meeting our timelines and budget. We have been able to deliver a lot of projects to our clients. LastPass Business has enabled us to share our passwords securely. We are able to work remotely and have enhanced remote collaboration. The security of our data has immensely increased. Since we had a data breach, we decided to go for LastPass Business, and it has increased our security by a huge margin.

Regarding how my team uses LastPass Business day-to-day, when having to manage multiple users for one login, it is so easy to share without having to provide the password. The plugins are extremely beneficial as well..”

Teddy Jakes

Finance Manager at Saint-Gobain ADFORS CZ s.r.o.

CEO at a legal firm with 1-10 employees

“Navigating through LastPass Business is easy, and the pricing, setup cost, and licensing experience is positive because it saves on cost and is very cost-effective with affordable licenses..”

Michael Albert

Senior Software Engineer at GPA

[Read full review](#) 

“Overall, the initial setup is pretty straightforward. I struggled just a little bit with the browser extension at first, but after you go through it a couple of times, there is no trouble. I probably shouldn't have struggled but may have been nervous at that point. As it is now, we're able to navigate and get what we need from it..”

Mike Klaus

Senior Systems Analyst/Administrator at a agriculture with 1-10 employees

[Read full review](#) 

“I switched from Bitwarden to LastPass Business because Bitwarden was a bit costly, and it was a bit hectic deploying it. It also had some very features that were very complex. It was not easy to use for everyone in my organization. That is why we decided to go for LastPass Business..”

Charles Nielson

Business Development Manager at ISC

[Read full review](#) 

“It was one of the easiest for implementing passwords. You can sync it with Active Directory. There were certain sites that I couldn't sync it with and I needed to input a password manually but it was really straightforward. Their interface is really easy to understand. It's not too difficult.

It took less than one day to get everybody onboard, the five people using it. It was really easy. The only thing they needed to do was import some passwords that they had and change some passwords..”

Luis Enrique

[Read full review](#) 

Network Engineer at a tech services company with 1-10 employees

Customer Service and Support

“I would recommend LastPass Business because it has improved security in my organization. It is easy to use, very cost-effective, and the support has been very proactive, responsive, and solution-oriented..”

Sospeter Martin

Human Resources Manager at Dow

[Read full review](#) 

“The customer support of LastPass Business is quick to respond to any of our issues and is very responsive, meaning they are available 24/7 and reachable through a variety of means..”

Michael Albert

Senior Software Engineer at GPA

[Read full review](#) 

“The technical support is just okay, medium, I would say. I have had a lot of contact with them and they know that I am an experienced user, so I normally only get a manual page back.

I am not always satisfied with their solution..”

Validated user

[Read full review](#) 

Operations Engineer at a tech services company with 1,001-5,000 employees

“Their technical support was very good. They generally respond via email, or they log into their service desk, and they generally post stuff up there that comes in the email to say there's been an update to a certain request. You log in and you see what the update is and you respond. I think they're overseas, so it generally does take a couple of hours to respond, and that's generally in the early hours of the morning. It would be better if they were in Australia and we got a response in the middle of the day. We deal with all different service providers and their response is more than adequate for what our requirements are..”

Mark Wight

[Read full review](#) 

ICT Manager at Onefortyone

“We've only had to contact technical support a couple of times and my personal experience was very good.

There are some products where the support is very poor and there are some products where the support has been good. I was pleased with the speed of response and the completeness of the response that I received from LastPass so to me, that is good.

I would rate their support a ten out of ten..”

Mike Klaus

Senior Systems Analyst/Administrator at a agriculture with 1-10 employees

[Read full review](#) 

“My only concern up until now is the communication, especially since this is for work. They do respond but sometimes, if you want to get in contact with somebody, it's really difficult when it comes to LastPass.

For example, I started LastPass Enterprise and I tried to contact sales or a contact person. For me to actually get in touch with somebody was really difficult. I even tried to give my name and email and they told me they would get back in contact with me. At first, I thought it may be something with my email domain, that maybe something about LastPass was dropping my emails. Then I started using my live domain email. Even so, I didn't receive any contact. So, my experience with LastPass is that it's a great solution, but when it comes to communication and support, it has been tough.

When it comes to opening a ticket, they do respond within one day. But, for immediate contact, no. It was crazy, especially in the beginning because I was so enthusiastic, I wanted to start right away. I tried for three weeks to a month to contact sales because I had many questions. It got so crazy that for me to actually get in contact with LastPass I even called LogMeIn to see if they could find a way to transfer me to LastPass.

LastPass is a great solution, but, because of the communication, I didn't actually start it as a solution for our enterprise business. That's why it has been only for four to five users..”

Luis Enrique

Network Engineer at a tech services company with 1-10 employees

[Read full review](#) 

Other Advice

“LastPass has implemented an AI agent on their site, which makes it impossible to connect with Sales to increase our license count. I have filed tickets and chatted with the bot multiple times, and I am unable to successfully connect with someone who can sell me one more license for an incoming Director. The chat wastes my time, first 'looking for a teammate' and then offering me a booking link that errors out. This is ridiculous..”

Validated user

Senior Director, Technology at a educational organization with 11-50 employees

[Read full review](#) 

“I give this product a nine out of ten because of increased security in advanced password requirements, which has been a vital aspect in my organization.

“Now we have peace of mind and we are very confident knowing our data is very secure and in safe hands. I rate this review experience a nine overall..”

Sospeter Martin

Human Resources Manager at Dow

[Read full review](#) 

My advice to others looking into using LastPass Business is that it is perfect for sharing across teams and colleagues. I recommend it because it will save time and money and provide peace of mind. It is really great for remote teams and for using contractors who might need short-term access to your logins.

It would be nice if LastPass Business had a support landing page with quick how-to

videos in multiple languages. However, I have not had a lot of need for support.

“I would rate this review a nine out of ten. .”

Jennifer Lopez

Java Software Engineer at Capgemini Engineering

[Read full review](#) 

“My advice to others looking into using LastPass Business is that it is a great tool.

I would highly recommend LastPass Business because any place you need more than one password can benefit from it. It is better suited for deployments that use multiple online products.

LastPass Business is a great tool that we use to share sensitive passwords among our team members. It is very easy to use for both technical and non-technical users, very cost-effective, and very secure with robust security features such as MFA, [SSO](#), and password management. It is a great tool and saves a lot of hassle. I would rate my overall experience with LastPass Business as an eight out of ten..”

Teddy Jakes

Finance Manager at Saint-Gobain ADFORS CZ s.r.o.

[Read full review](#) 

“My advice to others looking into using LastPass Business is that it is really a good tool. It keeps all my sites and apps secure and saves me time through the login process. Moreover, it has been great through the easy process of resetting passwords, providing unlimited storage of website information and their passwords arranged alphabetically. I also love the ability to click on the eye symbol to see the encrypted password. It is a very highly recommendable tool for any

organization that is looking to put their applications and other sites secure and easy to maintain the logins, save time, and those looking to share their passwords securely to collaborate on different projects or documents. This is the real deal with LastPass Business.

“I find LastPass Business to be the best, and I have not finished learning all the features. With the easy navigation of the LastPass Business website, the features are not hard to learn, and video training is provided, which has been providing a very smooth learning curve..”

Trevis Carter

Technical Support Engineer at Capgemini

[Read full review](#) 

“According to my experience, the price for LastPass Business is affordable and cost-effective. The licensing is very pocket-friendly, making it an affordable tool even for smaller organizations.

“Users complain less, especially due to increased security and no cyber threats. The central password makes it easy to manage all passwords. There are fewer calls for password resets, especially for the IT department, saving a lot of time and costs and minimizing disruption. This enables the IT department to focus on more strategic tasks.

“LastPass Business is very user-friendly and secure, very easy to use, cost-effective, and the support has always been top-notch.

“My user experience with LastPass Business has been great, earning a 9 out of 10 rating.

“It has really been a game changer, especially due to simplifying and streamlining the process of logging into different apps, where we use one password to open all the business applications, saving a lot of time. We have little concern for employees changing their logins because it is secure. We have little to no worry about data breaches and other security issues because our security has dramatically increased due to LastPass Business's robust security features.

“I purchased LastPass Business through the [AWS Marketplace](#).

“LastPass Business is a very comprehensive and easy-to-use password management solution that any business should adopt, especially if they want to secure their accounts and improve their security on their business applications and accounts..”

John Lewis

Senior Software Engineer at EY

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
