Product Recap

Keeper Enterprise Password Manager

Keeper Enterprise Password Manager

Recap

Keeper Enterprise Password Manager provides robust security across devices with two-factor authentication and seamless password sharing for users seeking ease of use and strong encryption.

Keeper Enterprise Password Manager offers a comprehensive solution for managing sensitive information with features like cross-platform compatibility, multi-device access, and complex password generation. Businesses appreciate its user-friendly interfaces and mobile-friendly design that enhances productivity. Keeper supports secure credential management with AES 256 encryption, browser extensions, and cloud storage, catering to both personal and professional needs. Advanced features such as autofill, folder organization, and fingerprint login ensure streamlined operations for individuals and teams.

What features make Keeper Enterprise Password Manager stand out?

- **Multi-Device Access:** Seamless usage across all devices.
- **Two-Factor Authentication:** Enhanced security for data protection.
- **Password Sharing:** Simplifies credential sharing.
- **Complex Password Generation:** Automates strong password creation.
- **Folder Organization:** Efficient management of passwords.
- **Browser Extensions:** Streamlines access across the web.
- **Cloud Storage:** Securely stores data with AES 256 encryption.

What benefits should users look for in reviews?

- **Security:** High-level data protection through encryption.
- **Productivity Enhancement:** Facilitates efficient time management.
- **Mobile-Friendly:** Ensures smooth user experience on smartphones.
- **Cross-Platform Compatibility:** Available on various operating systems.
- **Ease of Use:** Intuitive interfaces simplify navigation.

In industries like finance, healthcare, and education, Keeper Enterprise Password Manager is crucial for securing access credentials and sensitive information. Organizations leverage its features to manage passwords efficiently, ensuring compliance and streamlined operations. Teams benefit from enhanced security protocols and data synchronization across all devices, making it a favored choice in sectors requiring stringent data protection measures.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

“Keeper Enterprise Password Manager has positively impacted my organization by improving our security posture, as many compromised passwords have been able to be changed and we maintain high-level security, making sure that all devices are secured.”

Abraham Rodriguez

Technical Lead

“Keeper Enterprise Password Manager has positively impacted our organization by increasing our overall security.”

NickAlafogianis

Senior Security Engineer at a consultancy with 11-50 employees

“Keeper Enterprise Password Manager has had a positive impact on my organization by allowing us to deploy it to the teams fairly quickly and especially to have good user adoption within the teams thanks to its ease of use.”

Verified user

Ingénieur Avant Ventes Solution Msp at a non-tech company with 11-50 employees

“Keeper Enterprise Password Manager has had a positive impact on my organization because it allows us to secure all of our clients' passwords in a secure and legal way in Zero Trust mode.”

Guillaume Deroine

Chargé d'affaires informatique at OCI Informatique

“Keeper Enterprise Password Manager has impacted my organization positively because it is better to have your passwords recorded in a vault where it is more secure than just having it elsewhere.”

Verified user

IT Technician at a consultancy with 1-10 employees

“In our organization, Keeper Enterprise Password Manager has always made our life easy; with the help of the password manager, we just manage all our portals, passwords, and everything, and it's accessible with one click.”

AliKhan5

Software Engineer at a tech vendor with 1,001-5,000 employees

“Keeper Enterprise Password Manager has positively impacted my organization by providing us less downtime and more efficiency across all of our organizations.”

Verified user

Network Engineer at a outsourcing company with 51-200 employees

What users had to say about valuable features:

“The best features that Keeper Enterprise Password Manager offers include multiplatform integration, ease of administration of the product for admins and therefore also for MSPs, and ease of use for end users.

The multiplatform integration and ease of administration of Keeper Enterprise Password Manager help me concretely in my daily work by allowing users to access their passwords on their PC, Mac, smartphone, and from the Internet, while the very granular access rights allow us to restrict the use of certain passwords, sharing, and external access to specific people, which significantly increases the level of security.

Keeper Enterprise Password Manager has had a positive impact on my organization by allowing us to deploy it to the teams fairly quickly and especially to have good user adoption within the teams thanks to its ease of use..”

Verified user

Ingénieur Avant Ventes Solution Msp at a non-tech company with 11-50 employees

“The best features Keeper Enterprise Password Manager offers me include autofill, SSO login, folder share, and an auto password generator, including a random password generator.

“Out of autofill, SSO login, folder sharing, and the random password generator, I find myself using the personal password keeper, password auto generator, and autofill the most because it allows me to enter passwords automatically without looking and finding the password.

“Keeper Enterprise Password Manager has positively impacted my organization because it helps to manage our secrets more easily, and the application gives more accessibility to share with anyone..”

Verified user

[Read full review](#) 

Software Engineer at a tech vendor with 1,001-5,000 employees

“I think Keeper Enterprise Password Manager is a great product when it comes to my main use case. I believe they've made a good improvement lately, especially with the security score and the ability to validate and automatically show if a password has been compromised.

The best features Keeper Enterprise Password Manager offers include simple management and importing exported CSV. The import-export feature has helped me by allowing us to import devices instead of adding them one after the other, and we can put them in a specific folder. At the same time, it will verify if existing passwords are compromised so I can update them.

I would also add that the ability to share passwords for temporary access and to share information in a secure way is another useful feature. It also binds access to the MAC, which enhances security features in the field, so I don't have to give passwords through chat.

Keeper Enterprise Password Manager has positively impacted my organization by improving our security posture. Many compromised passwords have been able to be changed, and we maintain high-level security, making sure that all devices are secured..”

Abraham Rodriguez

Technical Lead

[Read full review](#) 

“For daily, day-to-day tasks, Keeper Enterprise Password Manager is easy to use. Our passwords are secure and easy to access.

Security is the main concern that we look at with Keeper Enterprise Password Manager. It provides great security in terms of password managing. It's a one-click solution, which is good.

Multi-factor authentication is the most reliable feature that I use right now with Keeper Enterprise Password Manager. It just pops up a notification on my phone, so it's an easy and the best way to secure our passwords.

The time saved is the most major benefit that we look at with Keeper Enterprise Password Manager. We don't have to log in or write our passwords again and again. It's just one click, one go, and everything is sorted out. Keeper Enterprise Password Manager protects it very easily, and it gives all the security that we are looking for right now. Our time is saved with one click of Keeper Enterprise Password Manager. Keeper Enterprise Password Manager keeps our passwords safe. We don't have to write them again and again..”

AliKhan5

Software Engineer at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

“The best features Keeper Enterprise Password Manager offers are that it is easy to use, you can set up single sign-on so you can just log in with your 365 email, it is a great password generator and a great tool for storing passwords, and I appreciate how it autofills the records for you when you try to sign in.

My experience with the password generator and single sign-on shows that single sign-on is great because you can manage users without having to manually create user accounts. Users can just log in with 365, so the system will pull the users from there and whoever needs access can be added to the group. This seamless feature helps users avoid having to log in to the site using a separate email and password.

Keeper Enterprise Password Manager has impacted my organization positively because it is better to have your passwords recorded in a vault where it is more secure than just having it elsewhere.

A specific outcome I have noticed since using Keeper Enterprise Password Manager is improved security, as users are now having their sensitive information in a vault instead of having it on a notepad or in other documents on their computer. This has helped from the security perspective.

Keeper Enterprise Password Manager has helped reduce password-related issues..”

Verified user

IT Technician at a consultancy with 1-10 employees

“The best features that Keeper Enterprise Password Manager offers include the fantastic BreachWatch system, which lets you know what has appeared on the dark web through various searches. It helps with credential management and fixing weak passwords. The one-time share feature is great, and we use that heavily for onboards, offboards, and sharing important credentials that we do not embed into tickets or via email. The reporting features are very useful. We tested the privileged access management SKU, which was very useful but did not come to fruition in our company due to a lack of need. The general MSP console and management of clients is very simple and useful compared to other password managers I have utilized.

When we first added BreachWatch, we could see how many of the client records provided to us were either insecure or not strong. This allowed us to go in and update those to more secure credentials, which is essentially the whole point. It is also good when we onboard clients, as we know what is insecure when they provide any secure logins. The reporting features are quite simple and easy to use, and log-wise they are great. We have it inputted into our SIEM, which helps.

Keeper Enterprise Password Manager has positively impacted our organization by increasing our overall security. It has made our general workflow quicker and easier for credential management and TOTP sharing. Overall, it does exactly what it is meant to do and is beneficial to our organization, especially as an MSP.

Keeper Enterprise Password Manager has improved our workflow through all credential management and the ability to pass over and retrieve logins from clients becoming much faster and easier..”

NickAlafogianis

Senior Security Engineer at a consultancy with 11-50 employees

[Read full review](#) 

Other Solutions Considered

“We previously used IT Glue. It was not as useful as Keeper Enterprise Password Manager and was a little clunky. It is great in other elements but not a dedicated password management tool..”

NickAlafogianis

Senior Security Engineer at a consultancy with 11-50 employees

[Read full review](#) 

“Before choosing Keeper Enterprise Password Manager, I had evaluated Google but found Keeper Enterprise Password Manager better. I have not evaluated any other password manager..”

Verified user

Software Engineer at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

“I previously used other solutions, but I don't want to name them yet. The reason I switched is that Keeper Enterprise Password Manager can do different things—not only password management but also verify if passwords are compromised and has Privileged Access Management. Those additional features made it more suitable to use..”

Abraham Rodriguez

Technical Lead

[Read full review](#) 

“The most important criteria in choosing Keeper Enterprise Password Manager over another solution include having a multi-tenant console allowing management of different clients, that the solution is full SaaS, and that integration with other tools is possible, along with the user experience..”

Verified user

Ingénieur Avant Ventes Solution Msp at a non-tech company with 11-50 employees

Use Case

“My main use case for Keeper Enterprise Password Manager is onboarding users and using it myself.

A specific example of how I and my users typically use Keeper Enterprise Password Manager in our day-to-day work is to record passwords, and when you try to log into some site, it will autofill the records for you. I primarily use it to securely store passwords..”

Verified user

IT Technician at a consultancy with 1-10 employees

[Read full review](#) 

“My main use case for Keeper Enterprise Password Manager is to save all my secrets and passwords within it.

“We have shared folders where we store all our secrets and shared secrets that everyone from the team can use. This way we don't have to manage it anywhere, and it's secured. We can share the folders with the entire team. I also use it for my personal secrets so that Keeper Enterprise Password Manager can autofill my passwords when I open my browsers..”

Verified user

Software Engineer at a tech vendor with 1,001-5,000 employees

Ingénieur Avant Ventes Solution Msp at a non-tech company with 11-50 employees

“My main use case for Keeper Enterprise Password Manager is to manage passwords as well as validating if any password has been compromised, as well as updating passwords and managing connections.

I use Keeper Enterprise Password Manager daily in my work. Every day, everything is now IP-based. Switches, IP devices, IoT devices—they all have login passwords, so I use this every day. I have a dashboard that tells me if any of those passwords are compromised, so I can quickly change them. I can make sure that they're using strong requirements for security..”

Abraham Rodriguez

[Read full review](#) 

Technical Lead

“I use Keeper Enterprise Password Manager to secure my passwords and everything. We have different logins for different portals, and we have to memorize all the passwords for these. In order to use Keeper Enterprise Password Manager, it gives us ease to keep our passwords accessible with one click. We don't have to write them down over and over again. With Keeper Enterprise Password Manager, I just click my password with one click, and then it's done.

You can use my real name when publishing my review. However, you cannot use my real company name in the review.

In our organization, Keeper Enterprise Password Manager has always made our life easy. With the help of the password manager, we just manage all our portals, passwords, and everything, and it's accessible with one click. Everything is easy, and our workflow is very smooth with this..”

AliKhan5

Software Engineer at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

“My main use case for Keeper Enterprise Password Manager is credential management for internal purposes and for client-related credential management and secrets keeping.

One of the main examples of how I use Keeper Enterprise Password Manager for credential management is for global admin access into tenants. Rather than having credentials saved elsewhere, we utilize Keeper Enterprise Password Manager's strong password creation skills and TOTP access, which can then be shared with other engineers. This helps lower costs on licensing due to not having multiple different accounts and it backs it up with a very strong, secure password or passphrase creation. We also utilize it for sharing credentials with clients and gathering credentials as Keeper Enterprise Password Manager allows us to share fillable forms with clients to gather information from them securely.

We utilize the platform as intended, being a password manager. It is very useful and quite secure. I appreciate being able to give staff free, personal accounts that can be used as long as they are licensed users. I highly recommend the BreachWatch element for any potential clients..”

[Read full review](#) 

“The advice I would give to others looking into using Keeper Enterprise Password Manager is that it's very easy to manage a large set of teams or to share shared secrets, lower environment secrets, and manage production secrets as well. I would rate this product a 9 out of 10..”

Verified user

Software Engineer at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

“Keeper Enterprise Password Manager does exactly what you are expecting it to do as a password manager. It performs well, looks good, and is pretty easy to set up. I recommend this over other platforms, as I have utilized 1Password and Dashlane in the past. Because I implemented this platform in my organization, I now use it personally. It is a great platform. .”

NickAlafogianis

Senior Security Engineer at a consultancy with 11-50 employees

[Read full review](#) 

“My advice for others looking into using Keeper Enterprise Password Manager is to have a great folder structure and define the right structures for the devices when it comes to servers, IP types, and types of IP devices like cameras, access control devices, and audio devices, with a good structure for the folders.

I give this review a rating of 8.5..”

Abraham Rodriguez

Technical Lead

[Read full review](#) 

“My advice to a company considering adopting Keeper Enterprise Password Manager is to clearly define user roles in order to reduce the attack surface as much as possible, ensuring that people who are, for example, interns, do not need to share passwords externally and do not need access to those passwords from outside, and to be very clear about the password strategy they want to implement. I gave Keeper Enterprise Password Manager an overall rating of 8..”

Verified user

[Read full review](#) 

Ingénieur Avant Ventes Solution Msp at a non-tech company with 11-50 employees

“My advice to other people considering using Keeper Enterprise Password Manager is that it is a solution with an administration console and a fairly unique model that allows it to be deployed on all devices, offering other tools such as the encrypted vault, and above all, it has the required certifications in the context of ISO 27001 or SOC 2, while being easy to administer and deployable in all small and large organizations. I would rate this product eight out of ten..”
