Product Recap

n8n

n8n Recap

n8n offers a flexible, low-code automation platform connecting over 200 applications to streamline workflows and increase efficiency through visual configurations and real-time monitoring.

n8n provides a robust environment for automating tasks with extensive integrations, benefitting users through its adaptability and developer-friendly design. It supports AI model integrations like ChatGPT to enhance automation. While users value its configurability and real-time logs, they suggest enhancements in scalability, stability, and documentation. It serves a multitude of purposes, from billing and customer support to marketing and data management, by linking platforms like Airtable and Google Sheets.

What are key features of n8n?

- **Flexibility:** Offers adaptable workflows and extensive customization options.
- **Low-Code Interface:** Simplifies workflow creation through a drag-and-drop interface.
- **Real-Time Logs:** Provides immediate feedback during task execution.
- **Integration Capacity:** Connects with over 200 applications and AI models.
- **Data Privacy:** Ensures strong data management to build user trust.

What benefits should users consider?

- **Time Savings:** Reduces time on repetitive tasks, increasing productivity.
- **Cost Efficiency:** Frees resources by automating various processes.
- **Enhanced Integration:** Seamless connections across platforms boost workflow efficiency.
- **Customization:** Tailored solutions through user-specific expressions.
- **Developer Support:** Encourages advanced usage through a developer-friendly environment.

n8n finds use in industries like healthcare, supply chain, and education, automating workflows to improve efficiency. Companies leverage it for tasks from e-commerce to AI-enhanced customer interactions, enhancing operations with minimal technical input required.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

- ✓ “My recommendation is to start with n8n if you have any need for automation or integration, especially if you value control, cost predictability, and technical transparency.”

Noach Ramallo

ERP recommendation specialist at a non-tech company with 1-10 employees

- ✓ “n8n is a really good automation platform where I can use it to automate my businesses and processes and also save money and time.”

Isaac Nelson

Business automation Expert at INSTRUTECH LIMITED

- ✓ “We see roughly a 70% reduction in manual processing time on the document pipeline side, which means our clients can focus on higher-value audit and compliance work rather than data entry.”

Harshwardhan Gullapalli

AI Engineer at a educational organization with 51-200 employees

“n8n is very useful because it has saved a lot of people a lot of code and has brought us to a point of little or no-code development that has helped create a way that we are not fully dependent on those writing the code and trying to glue integrations together.”

Augustine Kurumeh

CEO And Founder, Ai System Architect, Pre Execution Ai Governance Designer at Elarion Intelligence Limited

“For lead generation, I gave all the contacts to n8n and made it write the email and automated the email sending workflow for lead generation, and the conversion rate was around 70%.”

Jayesh Purswani

SDE at Trendly

“One positive impact that n8n has had on my customers' organizations is significantly less hassle over SEO or reaching out to clients and scheduling meetings.”

Rishabh Kankash

Solutions Architect at Bear Systems

“The best feature of n8n, in my opinion, is its flexibility, self-hosting capability, and the ability to build complex workflows with full control.”

Prashant

Software Engineer at Lancway

What users had to say about valuable features:

“n8n is just an empty canvas where you can drag and drop anything and do unimaginable things with n8n; there are so many possibilities. There are more than 500 different applications for integration, the AI agent, the memory feature which n8n provides, the complete look and feel of n8n, and the user experience, which is very easy to use with just a drag-and-drop method. It feels a new Canva for AI agents..”

Jayesh Purswani

SDE at Trendly

[Read full review](#)

“The best features of n8n are reading documents like Google Sheets and Google Drive, and especially the AI agent functionality, the Agent Mode and AI agent nodes, which I find very amazing, along with webhooks and HTTP nodes.

“I am integrating n8n with Google products. For example, I created an application where the client has huge data, and we integrated n8n there with Google Sheets. The Google Sheets already contained Google Drive links and Google Drive folder links, which we then list and send to AI. We summarize it through AI and then send it back to Google Sheets..”

Fazal Subhan

[Read full review](#) 

Systems Architect & Ai Product Strategist | Founder At Orb Deep Technologies at ORBDEEP

“The best features n8n offers that stand out to me are three things. First, the visual workflow builder allows me to see the entire data flow and orchestration logic graphically, making it much easier to debug and iterate, especially when working with complex multi-step processes. Second, the JavaScript code node provides full flexibility for custom data transformations, which most low-code platforms simply do not offer. I can write logic to fix JSON parsing issues, merge outputs, and handle edge cases without breaking out to a separate service. Third, the LLM integration nodes allow me to drop in GPT-4 API calls directly into the workflow and chain them with other operations, which is genuinely powerful.

One thing worth mentioning about my main use cases and the workflows I built with n8n is the real impact it had on our client side. We are automating tasks that chartered accountants did manually, such as trial balance mapping and financial statement preparation. We see roughly a 70% reduction in manual processing time on the document pipeline side, which means our clients can focus on higher-value audit and compliance work rather than data entry. That is where n8n really shines for us. It is not just about automating something technical; it is about delivering tangible business value to financial services..”

Harshwardhan Gullapalli

AI Engineer at a educational organization with 51-200 employees

[Read full review](#) 

“The best features n8n offers include the webhook node, which I really appreciate, along with many other nodes. The agent feature is also good; I have used it for many things. n8n connects directly to our Google Sheets, which I find valuable, as well as the Telegram bot, which I appreciate a lot.

I find myself using the webhook node the most because I use it differently, such as in LinkedIn. I created a community node that daily pulls data for Telegram posting. I also created a bot in Telegram that retrieves specific videos. For example, I am using the Kaggle University webhook role that scrapes data every morning and sends it to Telegram. This workflow is essential for me. In digital marketing, I provide form submissions, and when someone submits through the site, it hooks that and automatically sends a message to WhatsApp, making it easy to convert customers. My clients are very happy with this, so I consistently use the webhook.

n8n has positively impacted my organization because we previously needed to write product descriptions manually for over 50,000 products on our website. It is not feasible to write all of them manually, so we created an automation. This automation helps us by automatically writing all meta descriptions and titles, which significantly supports our growth. It is very helpful and time-saving for us..”

Vamshi_Krishna

Search Engine Optimization Analyst

[Read full review](#) 

“The orchestration and automation are the most valuable aspects. n8n supports AI agents workflow, CRM operation, integration, and process automation in a way that helped me understand the logic of how I orchestrated the workflow, including all the different layers that are integrated.

The different workflow operations include control workflow, enrolling contacts in workflow, getting workflow details, pausing workflow, and resuming workflow. These are different API points that I integrated to help in AI automation for AI agents, making them autonomous agents that can work as a companion with marketers in the marketing domain.

The orchestration layer that connects all APIs without ambiguity drew my attention to the way n8n actually connects all these different APIs. I used that same orchestration logic to understand how that logic can be applied to connecting how AI agents autonomous workflows would also work.

n8n is very useful because it has saved a lot of people a lot of code. It has brought us to a point of little or no-code development that has helped create a way that we are not fully dependent on those writing the code and trying to glue integrations together. As the founder and designer of an early-stage company, n8n has helped me by giving me the orchestration logic through which I was able to orchestrate how workflows move before considering how to govern this automation.

One of the best features is trigger-based workflow automation and integrations, which has reduced my development time significantly..”

Augustine Kurumeh

CEO And Founder, Ai System Architect, Pre Execution Ai Governance
Designer at Elarion Intelligence Limited

[Read full review](#) 

“One interesting edge case I handled with n8n was building a workflow with robust error handling and retry logic for unstable external APIs. In this setup, I used conditional checks and retry mechanisms with delays, so if an API failed or returned incomplete data, the workflow did not just fail. If it still failed after retries, the system could log the error and send a notification to Slack for manual intervention. I also designed the workflows to be idempotent, so even if it is tried multiple times, it would not create multiple records. This made the system much more reliable in production.

“The best feature of n8n, in my opinion, is its flexibility, self-hosting capability, and the ability to build complex workflows with full control. It allows us to build complex workflows using conditional logic and loop data transformation. The open source and self-hosting is a significant advantage, and the visual workflow builder is very useful, easy, and powerful. We can drag and drop the node and visually design and debug the workflows. n8n provides strong API and developer support, allowing us to write custom JavaScript, call any REST API, create custom nodes, and also event-based process and scheduled automations through webhooks, cron jobs, and API-based triggers. Cost efficiency is another advantage, as there is no per-task pricing if self-hosted, making it ideal for high-volume automation. Additionally, the feature of version control and workflow history allows us to track changes in workflows. Therefore, the best features of n8n, in my opinion, are its flexibility and control.

“One additional aspect I would highlight about n8n is how well it handles data transformation and debugging within workflows. The ability to inspect data at each step and modify it using built-in nodes or custom JavaScript makes it powerful for real-world scenarios. I particularly appreciate how workflows can be designed in a modular way, making them reusable and easier to maintain as the system grows..”

Prashant

Software Engineer at Lancway

[Read full review](#) 

Other Solutions Considered

“When my customers start working with me, most of them are Indian right now, and they do not know these automations exist. If they were previously aware, they would be using Zapier, the American company. Once I make them aware of n8n and how it works, they're very eager to try it, and once they see the results in action, they just stick with n8n..”

Rishabh Kankash

Solutions Architect at Bear Systems

[Read full review](#) 

“Previously, I used Zapier and Make.com. The reason I switched is that those tools are still not complex enough to manage multi-flow processes and are better suited for simple use cases with basic automations and triggers, particularly for small companies that want to automate one or two processes..”

Noach Ramallo

ERP recommendation specialist at a non-tech company with 1-10 employees

[Read full review](#) 

“Before choosing n8n, I evaluated Zapier, Make.com, and Workato. Among the three, I felt that n8n provides the most visual experience, the most powerful tool for execution and for production, and a very reasonable pricing system..”

Noach Ramallo

[Read full review](#) 

ERP recommendation specialist at a non-tech company with 1-10 employees

“Before n8n, we were building custom Python and FastAPI microservices to handle document processing workflows. It worked, but it required full backend development cycles. We would write code, containerize it, deploy it, and maintain it; every workflow change meant touching the codebase. With n8n, we can iterate much faster. Business logic changes that would have taken days of deployment and testing can now be done in hours through the visual workflow builder. We do not completely abandon custom code; we still use Python for heavy lifting such as OCR and LLM fine-tuning, but n8n becomes our orchestration and integration layer instead of building everything from scratch..”

Harshwardhan Gullapalli

[Read full review](#) 

AI Engineer at a educational organization with 51-200 employees

“Comparing Zapier with n8n, I see that Zapier is kind of expensive; it charges per run. When I say per run, it means every run over the workflow, it charges you, plus the API costs on top of that. The other microservices that Zapier has are kind of expensive. I would say Zapier is more user-friendly; it's very no-code, and anyone who's never deployed something themselves or built an automation can easily use Zapier to make something, but it will end up being a lot more expensive. For example, per run on Zapier, I think is ten cents, and if you have one hundred runs of a workflow, that is easily one dollar. Workflows usually run for more than fifteen thousand to sixteen thousand runs..”

Rishabh Kankash

Solutions Architect at Bear Systems

[Read full review](#) 

“Before choosing n8n, we evaluated a few alternatives. We looked at Make, formerly Zapier, because it is popular and has good LLM integrations, but it felt more suited to simple automation rather than complex workflows with custom logic. We briefly looked at Airflow for orchestration, but that is really designed for data pipeline scheduling rather than real-time workflow automation with webhook triggers and immediate responses. There were other low-code platforms as well, but most of them did not provide the JavaScript flexibility to write custom fixes for LLM output issues..”

Harshwardhan Gullapalli

AI Engineer at a educational organization with 51-200 employees

[Read full review](#) 

ROI

Real user quotes about their ROI:

“I can estimate that I only work one time when I create the workflow, which typically takes two to three days. However, the overall impact lasts many days, effectively saving a considerable amount of time..”

Vamshi_Krishna

Search Engine Optimization Analyst

[Read full review](#) 

“n8n provides a strong return on investment and is very helpful and cost-optimized. Using n8n is more cost-effective compared to other tools, and you do not have to spend much money on n8n in comparison to other solutions..”

Verified user

Cloud Engineering and Automation Engineer at a tech vendor with 1,001-5,000 employees

[Read full review](#) 

“I believe the return on investment from using n8n is good because employees who previously worked on the specific problems I've automated can now focus on other, more interesting tasks without spending so much time on repetitive ones..”

Dotan Sadka

Ai And Automation at PeerSpot

[Read full review](#) 

“I have seen a return on investment, and the clearest metric was the 70% reduction in manual processing time I mentioned, which translates directly to our clients handling roughly three times the document volume with the same team size. For a chartered accountant firm, processing financial documents at that scale is substantial..”

Harshwardhan Gullapalli

AI Engineer at a educational organization with 51-200 employees

[Read full review](#) 

“I have not seen a return on investment from my side because the impact is primarily on the customer side, where non-technical people can go through a learning curve and take over some of these tools, allowing them to save costs because they can reduce the hiring process for external developers for this type of automation that they can do themselves..”

Noach Ramallo

ERP recommendation specialist at a non-tech company with 1-10 employees

[Read full review](#) 

“Every AI capability out there is missing something. It is missing commit. Every AI action is in the policy documents, but governance only treats actions after they have already occurred. There is no governance at the commit that actually enforces action at the runtime. In essence, governance that is not at commit is advisory.

n8n has definitely saved me time. If we are considering finances, I should not speak about finances because I have not yet had what I built go into the ecosystem to generate funds. However, the agent that I created, which is an extension of what n8n already has in terms of solving problems and creating value in the ecosystem, is definitely going to help me create revenue. The automation agent I created extends n8n in terms of guardrails and governance in the autonomous field at the commit boundary, and this is definitely saving time for me and adding value..”

Augustine Kurumeh

CEO And Founder, Ai System Architect, Pre Execution Ai Governance
Designer at Elarion Intelligence Limited

[Read full review](#) 

Use Case

“My main use cases for n8n involve workflows I built. The first is a genfin mapping workflow, which takes trial balance data and uses GPT-4 with structured output parsing to automatically classify accounts into the correct financial statement line items. A second workflow is the basis of preparation workflow, which ingests PDFs, extracts financial context, and then generates a complete basis of preparation document using an LLM. That one involves webhook triggers and custom JavaScript nodes for output fixing..”

Harshwardhan Gullapalli

AI Engineer at a educational organization with 51-200 employees

[Read full review](#) 

“I run an automation agency at orbisr.com, and we use n8n for our projects. We create systems for others to use in their business automation rather than for our own use, and we use n8n to build these systems.

“We primarily use n8n to create scrapers, website crawling tools, data collection systems from websites, and email automation, all integrated with different applications. I do not use it solo; I use it in combination with other technologies. We sometimes use it with a Python backend and partially with n8n. We call the backend through our architecture, for example, when we have a Python backend and a front-end with React, and then we have another backend with n8n, combining it with different usage patterns..”

Fazal Subhan

Systems Architect & Ai Product Strategist | Founder At Orb Deep Technologies at ORBDEEP

[Read full review](#) 

“My main use case for n8n is to create a workflow for affiliate marketing, where I need to send Telegram affiliate links manually. When I was looking for automations, I appreciated that n8n offered the features I needed. I am also using LinkedIn automation, and when we need to post on LinkedIn, we go to ChatGPT or any GPT, ask a few questions, and filter that content into a LinkedIn post for posting. We created another automation where I give the Telegram bot to the client, enabling them to automatically write anything they want. It automatically triggers the APIs, using good prompt engineering to post on LinkedIn, which saves a lot of time as we do not have to go to LinkedIn manually; it is direct from the bot.

I am creating workflows primarily to save time for my clients and myself. These workflows are very helpful for us..”

Vamshi_Krishna

Search Engine Optimization Analyst

[Read full review](#) 

“I generally use n8n for my email responses, for lead generation, for image generation, responses to all my WhatsApp messages, creating bookings, and handling all my tasks for meetings.

For lead generation, I gave all the contacts to n8n and made it write the email and automated the email sending workflow for lead generation, and the conversion rate was around 70%. If I message 100 users, I get 70 users converted and experienced a growth in business by around 50%.

Regarding the memory feature: whenever I get a booking through my WhatsApp, the memory feature stores everything inside it and later helps other clients to check my schedule and book a call with me for a specific time when I am actually free..”

Jayesh Purswani

SDE at Trendly

[Read full review](#) 

“My main use case for n8n is in the area of HubSpot marketing CRM AI agent project. I built and implemented CRM marketing automation patterns such as contact creation, audience and list management, workflow enrollment, pause or resume controls, and campaign ROI reporting through HubSpot APIs. My perspective is practical and build-oriented, focusing on how automation tools such as n8n support AI agents workflows, CRM operations, integrations, and process automation.

I have also designed a Mollie agent that helps with onboarding and processing payments for e-commerce, mainly for the EU region. That represents another use case where I made use of n8n..”

Augustine Kurumeh

CEO And Founder, Ai System Architect, Pre Execution Ai Governance
Designer at Elarion Intelligence Limited

[Read full review](#) 

“I have been working in my current field for 1.5 years, and I have gained hands-on experience in automation, APIs, integration, and workflow optimization, especially using tools like n8n to streamline the process. During this time, I have developed practical experience with the tools and integrated various applications with n8n.

“I have 2.5 years of experience with n8n, which includes 1.5 years of personal experience and an additional year of usage before that. During this time, I work on building automated workflows, integrating APIs, and optimizing processes to reduce manual efforts.

“My main use case for n8n is designing automation and system integration. I primarily use it to connect different services via APIs, automate repetitive tasks, and build event-driven workflows. For example, I have used it to process incoming data through webhooks, transform it, and push it to other systems such as databases or messaging platforms. I have automated repetitive tasks, and API orchestration and integration are also tasks I use n8n for to connect multiple services, handle data transformation, and automate communication between the systems, especially where there is no direct integration available.

“One workflow I built on n8n was for automating lead processing from a website form. When a user submits a form, a webhook in n8n gets triggered. The workflow then validates and transforms the data based on certain conditions such as lead quality and routes the data accordingly. For example, high-priority leads are automatically sent to Slack for immediate attention. All leads are stored in a database or Google Sheet, and I also added an email notification step so the system gets alerted instantly. This automation significantly reduces the manual work and ensures a faster response time to potential customers. Another automation I have built is invoice generation and invoice analysis. By using WhatsApp, chat, or a Telegram bot, we can provide the input or the required data through that, and the automation will process the data and generate the invoice, provide the PDF as output, and also store all the data in the database and send the mail to the admin for approval or cross-verification..”

Prashant

Software Engineer at Lancway

[Read full review](#) 

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“As I am a full-stack developer, the initial deployment of n8n took me almost half a day, so it was not a difficult task for me. I had no issues with that and never faced problems..”

Muhammad Abubakar

[Read full review](#) 

Works at a manufacturing company with 51-200 employees

“The setup of n8n is sometimes very complicated, especially with the HTTP node, which is complex to set up. The local credential and environmental credential configurations are somewhat complex and could be simplified..”

Fazal Subhan

[Read full review](#) 

Systems Architect & Ai Product Strategist | Founder At Orb Deep Technologies at ORBDEEP

“Pricing is a bit high, and the setup experience had no cost; it was entirely free and there was no licensing required for this. I used AWS to set up n8n and run it locally on the AWS instance..”

Jayesh Purswani

SDE at Trendly

[Read full review](#) 

“The pricing experience was a bit of a learning curve. Working in an on-premise environment with no cost is great. For cloud environments, I noticed that depending on the number of nodes used and the number of executions, the basic plan might not be enough, and this is something I learned through experience. These days, when I recommend n8n, I always go with the tier one pricing system, opting for the premium option..”

Noach Ramallo

ERP recommendation specialist at a non-tech company with 1-10 employees

[Read full review](#) 

“I am not really focused on reliability and output because I am much more focused on the commit boundary. What is aligned at the commit boundary is what actually passes down to the downstream as checking outputs. When the upstream is being recalibrated and what I created was being recalibrated, I was not so focused on checking output scores or how the output is right. I am more into what is aligned with action and consequence for the greater good of who the consequence falls back to, which is the human being..”

Augustine Kurumeh[Read full review](#) 

CEO And Founder, Ai System Architect, Pre Execution Ai Governance
Designer at Elarion Intelligence Limited

“Since we self-hosted, we avoided n8n's SaaS pricing entirely. Our costs are primarily on the Hostinger VPS subscription, which is quite reasonable at around fifteen to twenty dollars per month, plus the time investment in setting up Docker, configuring persistent storage, and managing the infrastructure ourselves. The licensing side is straightforward because the self-hosted version is open source. We do not have per-user seat costs or tiered pricing to negotiate. That makes it very cost-effective..”

Harshwardhan Gullapalli[Read full review](#) 

AI Engineer at a educational organization with 51-200 employees

Customer Service and Support

“I never contacted n8n's technical or customer support. I made a suggestion to them, but I do not recall what it was, and I did not receive a response from them..”

Muhammad Abubakar

Works at a manufacturing company with 51-200 employees

[Read full review](#) 

“I don't often communicate with the technical support of n8n; the community support is really good. I can reach out to members of the community, ask questions, and usually within a week, they're answered..”

Rishabh Kankash

Solutions Architect at Bear Systems

[Read full review](#) 

“I am not aware of customer support because nowadays many AI things are available in the market. I do not have to reach out to n8n customer support. I just ask a question to ChatGPT or Gemini, and it will answer my questions. I have not contacted them..”

Rohit Rohit

CTO at Alltake Global Private Limited

[Read full review](#) 

“Customer support has been more reliant on documentation, community, and direct support. n8n has a fairly active Discord community where I can ask questions and get responses quite quickly from both the team and other users who have built similar workflows..”

Harshwardhan Gullapalli

[Read full review](#) 

AI Engineer at a educational organization with 51-200 employees

“Through n8n Cloud support, I have had a good experience. I received dedicated support via email with generally good and faster response times than the free tier. I describe the support team as knowledgeable, helpful, and responsive. They often address questions relevant to my scope, and at times they also recommend searching for technical documentation or specific forums. Ultimately, they always point me to the relevant solutions for any problem..”

Noach Ramallo

[Read full review](#) 

ERP recommendation specialist at a non-tech company with 1-10 employees

“I have not had issues that required me to contact support for n8n to understand how their customer service works. However, if n8n customer service uses artificial intelligence, then its customer service would need to be recalibrated with what is currently emerging. It is very clear from what I have been doing and what is unfolding that calibration after outcomes helps the institution learn, while calibration before commit helps the institution stay protected. If n8n makes use of models in integrating and trying to help in their customer service, they might be using some data to that particular vendor. I do not know how their customer service works, but I suspect they have scripted artificial intelligence in their customer service. From the standpoint of platforms such as n8n, they should be part of the solution regarding ethical integration of AI into the autonomous era that is upon us..”

Augustine Kurumeh

CEO And Founder, Ai System Architect, Pre Execution Ai Governance
Designer at Elarion Intelligence Limited

[Read full review](#) 

Other Advice

“My customers mostly prefer deployment on the cloud. We are using [AWS](#), [Hostinger](#), and there are a few more cloud providers. I would rate this review a 9.5..”

Fazal Subhan

Systems Architect & Ai Product Strategist | Founder At Orb Deep Technologies at ORBDEEP

[Read full review](#) 

“If you are looking into using n8n, I would recommend this: if you have developers in your team who are comfortable with JavaScript and APIs, n8n is genuinely worth evaluating. It is particularly strong for AI automation workflows where you need to orchestrate LLMs with custom logic. Start with a proof of concept on a specific use case rather than trying to replace your entire automation infrastructure at once, and budget time to learn the JavaScript code node properly, as that is where most of the power comes from. Finally, be realistic about self-hosting, as it gives you cost savings and control. I would rate this product an 8 out of 10..”

Harshwardhan Gullapalli

AI Engineer at a educational organization with 51-200 employees

[Read full review](#) 

“My advice would be to start with a clear use case rather than trying to automate everything at once. Begin with a small, well-defined workflow, such as a notification or data syncing, and then gradually expand as you get comfortable with the tools. Another important point is to design workflows with error handling and scalability in mind from the beginning, especially if you plan to use it in production. Overall, it is a very powerful tool, but you can get the most value when you approach it with structured and thoughtful implementation. I would rate this product an 8 out of 10..”

Prashant

Software Engineer at Lancway

[Read full review](#) 

“There are a couple of things which I haven't explored, such as the [Jira](#) plugin, which I am yet to explore. There is a [Notion](#) plugin, so basically, all the product designing and product development tools in the market are plugins I have never used with n8n, and I am very keen to use them. I will soon use these and share another review. I would rate n8n a 7 out of 10. There is no specific reason for giving it a lower score, but certainly, there is also no reason to give it a higher score. It perfectly fits for a 7. I would surely recommend using n8n for daily work..”

Jayesh Purswani

SDE at Trendly

[Read full review](#) 

“I came up with my approach by taking a piece of paper and writing down all my ideas. First, I took the YouTube course and completed the tutorials. Then, I self-hosted n8n in [AWS](#), using [Amazon Web Services](#) and connected to the VPS. When we started working, I needed to write the workflow on paper, determining the

necessary nodes and creating a rough diagram. I do this daily; if I get any errors, I take a screenshot and ask questions in Claude or ChatGPT, and I solve any problems with their help. I also use Claude MCPs, which makes it easy to create the workflow.

I purchased n8n through the [AWS Marketplace](#) and directly hosted it in AWS.

My advice for others looking into using n8n is to take advantage of the 14-day free trial. Open the free trial and simultaneously utilize their courses. If you can read, do so while executing to enhance your knowledge. They provide numerous YouTube tutorials as well, and n8n has beginner and advanced courses available. By watching and implementing the material, you can improve your automation and workflow skills effectively.

I find n8n to be a good tool for those who do not know coding but want to build significant automations. I believe it has a promising future as many users will benefit from it.

I rated this product an eight overall..”

Vamshi_Krishna

Search Engine Optimization Analyst

[Read full review](#) 

“n8n is very useful because it has saved a lot of people a lot of code. It has brought us to a point of little or no-code development that has helped create a way that we are not fully dependent on those writing the code and trying to glue integrations together. As the founder and designer of an early-stage company, n8n has helped me by giving me the orchestration logic through which I was able to orchestrate how workflows move before considering how to govern this automation.

n8n did not give me a reason to go and start reinventing what was already there. It

gave me the ground that I could use with the same logic that already exists, creating a particular way in which it moves in sequence and in good order. That brought about the aspect I was trying to build, which made me have to not use n8n straight because n8n did not allow me to put in or enforce governance at the point of execution with these AI agents as we are already integrating them to do work that has consequences on humans. Because of that constraint, I used the way n8n itself flows and works to create an autonomous system that I designed for the marketing domain, making sure that the guardrails are executing at the commit boundary. At the point of execution, we ensure it is not something that we need to check after the consequence has happened because n8n did not allow for that, but it did support a bigger part of the process. I had to repurpose what was already there and add the layer that was not actually there.

As an early founder yet to receive seed funding, I understood how n8n works. I am more technical, and I am not focused on deploying n8n as an enterprise stack. Rather, I was looking at a way that what n8n has can be extended in terms of AI agent workflows. The agent that I created, which is an extension of what n8n already has, addresses the gap by adding guardrails and governance in the autonomous field at the commit boundary. This is definitely going to help me create revenue and is definitely saving time for me. My overall rating for this product is 7 out of 10..”

Augustine Kurumeh

CEO And Founder, Ai System Architect, Pre Execution Ai Governance
Designer at Elarion Intelligence Limited

About PeerSpot

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
