Product Recap

Veritas Alta Data Protection

Veritas Alta Data Protection Recap

Veritas Alta Data Protection offers comprehensive data backup and recovery solutions tailored for enterprises, ensuring data safety and compliance.

Designed for seamless integration into complex IT environments, Veritas Alta Data Protection leverages advanced technology to provide reliable data protection, scalability, and ease of management. It caters to diverse sectors, supporting cloud-native and hybrid architectures while ensuring streamlined disaster recovery. Users find it valuable in optimizing backup processes, securing sensitive information, and maintaining high data integrity.

What are the key features of Veritas Alta Data Protection?

- **Scalable Architecture:** Adapts to growing data storage needs without performance degradation.
- **Comprehensive Cloud Support:** Seamless integration with major cloud providers for enhanced flexibility.
- **Automated Backup Management:** Reduces manual intervention with intelligent scheduling and deduplication.
- **Robust Security Protocols:** Protects data with encryption and access control measures.

What benefits should users consider?

- **Cost Efficiency:** Reduces long-term expenses associated with traditional backup systems.
- **Reduced Downtime:** Quick recovery options minimize operational disruptions.
- **Regulatory Compliance:** Assists in meeting industry-specific data protection standards.

In industries like finance and healthcare, Veritas Alta Data Protection is implemented to address critical data protection needs. It supports the secure handling of sensitive customer information and adheres to stringent compliance mandates, ensuring continuous protection and availability of essential data resources.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

“Regarding cost-effectiveness and return on investment, we have seen benefits in the form of saving time and resources.”

RahulSharma8

Storage Platform Engineer at Expedia Group

“All latest technologies have been incorporated in Veritas Alta Data Protection.”

Sanjeevan Sivapaleswararajah

Manager, Network Ict at Associated Motorways (Private) Limited

“In the last two years, we faced issues with ransomware, but because of the encryption level which we set with this backup software, we were able to restore all of our data without losing a single file.”

ShaileshPednekar

Assistant General Manager System at Transasia Bio-Medicals Ltd.

“Veritas Alta Data Protection is an industry leader, and I am quite impressed by the leadership that they have in this segment.”

Aman

Enterprise solution architect at a manufacturing company with 10,001+ employees

“The ransomware protection feature and anomaly detection are the most valuable, and the ability to integrate new cloud workloads is also valuable.”

Karthik C.

Solutions Architect at a tech services company with 51-200 employees

“The solution is very easy to use.”

Adnan Yurtoglu.

Senior Consultant (NetBackup) at Yapı ve Kredi Bankası AS

“It is rather easy to replicate data across your cloud environment using this solution once you've done it a few times.”

Akash Maurya

Technical Consultant (Pre-Sales) at Softcell Technologies Limited

What users had to say about valuable features:

I think the best feature Veritas Alta Data Protection offers is integration with existing hyperscalers or virtual platforms as well as integration with current computing platforms, where we can see this working well with our existing scenarios.

I am aiming at first securing the data, which is paramount, and second, the data retrieval in the event of a crisis should the primary data center go down. The third priority is achieving this at a very affordable cost compared to other competition players with respect to this solution. .”

Aman

Enterprise solution architect at a manufacturing company with 10,001+ employees

[Read full review](#) 

“The solution is easy to navigate and provides a foolproof approach. It has good features such as deduplication of the database, which saves storage space in the backup size.

“The unique selling proposition includes automated policy-driven operations.

“The granular restoration feature is effective and precise for our work. The reporting and analytics capability are comprehensive..”

ShaileshPednekar

Assistant General Manager System at Transasia Bio-Medicals Ltd.

[Read full review](#) 

“The solution offers good ransomware protection.

It is rather easy to replicate data across your cloud environment using this solution once you've done it a few times.

The solution's flexibility in its deployment and recovery options is very easy.

Veritas helps provide data protection across multiple cloud environments effectively. It's the best solution.

In terms of the solution's anomaly detection extensions, we have some set of policies. According to that, and as per the organization's requirement, we have plans to protect our solution and this anomaly detection is effective for that. It helps protect our data.

Overall, Veritas is great and the services we get from the OEM have been excellent.

It's my understanding that the solution has helped our organization consolidate tools and applications, however, I don't have too much information on the process.

The solution helped free up staff for other projects. The time we've saved has been very good. It's better compared to other tools.

It's helped us reduce our costs for backup and recovery..”

Akash Maurya

Technical Consultant (Pre-Sales) at Softcell Technologies Limited

[Read full review](#) 

“Easy restore, WORM-capable, and immutable backup features are available in Veritas Alta Data Protection. The all-in-one solution is easy to upgrade, and all sorts of features are available on the Flex Appliance.

“Because it is a disk-based solution, restoring takes about five minutes with Veritas Alta Data Protection. Easy access and handling are provided.

“All latest technologies have been incorporated in Veritas Alta Data Protection. Multi-factor authentication is enabled, ransomware protection is enabled, and all security checks have been put in place.

“Veritas Alta Data Protection is a heterogeneous support product, meaning any product, any operating system, and any environment can be integrated with it.

“All operating systems are supported, including file-level, database-level, and some application-level integration with Veritas Alta Data Protection.

“Whenever there is a requirement to restore with Veritas Alta Data Protection, data can be returned within ten to twenty minutes..”

Sanjeevan Sivapaleswararajah

Manager, Network Ict at Associated Motorways (Private) Limited

[Read full review](#) 

“The solution is very easy to use. I'm comfortable with it.

Its virtualization is very good.

We use the solution with Netgear.

It's very easy to replicate data across our cloud environments. We've tested it with multiple clouds, including Azure and Alibaba, and it works well.

The product is very flexible in terms of deployment and recovery times.

All of the data we use is connected to the network. They are immutable. We use, for example, Data Domain and Veritas appliances. Any kind of backup can be imported.

It's good at providing data protection across multiple cloud environments. However, we are just testing it for small amounts of data. So far, it's been very easy.

We have a clustered master server and geographic clouds, and it keeps the data very safe. It's easy to manage it. We can switch over to a disaster site very easily.

It's helped us consolidate from other tools and applications.

The solution frees up our staff for our employees. It helps us save time. We've saved more than 20% per day as we try to use automation capabilities. Many processes and APIs are automated and that saves us from manual work.

We've saved a lot of costs related to backup and recovery..”

Adnan Yurtoglu.

Senior Consultant (NetBackup) at Yapı ve Kredi Bankası AS

[Read full review](#) 

“I do utilize the automated policy-driven operations with Veritas Alta Data Protection.

“They have helped in reducing manual workloads because manual intervention is required to handle errors or backup job failures when trying to back up a particular AWS account where critical resources are deployed. Discovery takes a lot of time because we are backing up data already in the S3 buckets. We often face challenges with resource discovery because discovery does not happen once a month; it happens daily. Every day, the discovery job runs before backing up resources. We may encounter issues in discovery or related to permissions, meaning if we have backup permissions on a bucket but further intensive permissions are present on any particular file, the Veritas Alta Data Protection job will skip that file. At times, backup fails with one or another error, and manual intervention is definitely needed. It is predominantly automated and policy-driven, but manual intervention is also required sometimes.

“We tested the effectiveness of Veritas Alta Data Protection's granular restoration feature during POC because we had a requirement to test various scenarios like restoring the bucket in a particular region, restoring the bucket in a different region, restoring EC2 instances, restoring containers, and databases. One more crucial feature for us in selecting Veritas Alta Data Protection is having replication between Veritas Alta Data Protection clusters. Once the primary backup job is complete, Veritas Alta Data Protection runs an SLP job, which is a storage lifecycle policy. This SLP job moves or replicates the data from one Veritas Alta Data Protection cluster to another. If the Veritas Alta Data Protection cluster goes down, the data is still replicated to the other Veritas Alta Data Protection cluster..”

RahulSharma8

Storage Platform Engineer at Expedia Group

[Read full review](#) 

Other Solutions Considered

“Previously, we used Dell PowerProtect Data Manager. With the Dell PowerProtect Data Manager central console, we can restore data from a central console. With Alta Data, we can only restore data through the client and we need the correct password to do so. With Dell PowerProtect Data Manager, we can perform local and alternate recovery. No scripts are required for SAP HANA, which is not the case with Alta Data..”

Karthik C.

Solutions Architect at a tech services company with 51-200 employees

[Read full review](#) 

“Before choosing Veritas Alta Data Protection, we were evaluating Cohesity, but Cohesity acquired Veritas' backup operations. Therefore, we opted for Veritas Alta Data Protection, as we are now part of Cohesity, making us a customer of Cohesity..”

RahulSharma8

Storage Platform Engineer at Expedia Group

[Read full review](#) 

ROI

Real user quotes about their ROI:

“We have observed return on investment with Veritas Alta Data Protection. We can see approximately 10% in savings, which could be in terms of time saving or money saving..”

ShaileshPednekar

Assistant General Manager System at Transasia Bio-Medicals Ltd.

[Read full review](#) 

“Other backup solutions require contacting multiple vendors when something goes wrong with the storage, but Alta Data provides a single-vendor solution, saving our customers money..”

Karthik C.

Solutions Architect at a tech services company with 51-200 employees

[Read full review](#) 

“Regarding cost-effectiveness and return on investment, we have seen benefits in the form of saving time and resources. The only reason we opted for Veritas Alta Data Protection is to protect our users' data, which is PCI, securely in case of a ransomware attack. We can back up our resources directly on AWS, eliminating the need for a Veritas Alta Data Protection cluster. It is not primarily about cost optimization, but more about protecting our organization against ransomware attacks to avoid being brought to its knees..”

RahulSharma8

Storage Platform Engineer at Expedia Group

[Read full review](#) 

Use Case

“In the last two years, we faced issues with ransomware. Because of the encryption level which we set with this backup software, we were able to restore all of our data without losing a single file..”

ShaileshPednekar

Assistant General Manager System at Transasia Bio-Medicals Ltd.

[Read full review](#) 

“I have multiple virtual machines, physical machines, an SaaS workload, and some of the cloud workflows as well. There are also DBs, such as SQL, Mongo, and SAP HANA. I use the solution for backups..”

Akash Maurya

Technical Consultant (Pre-Sales) at Softcell Technologies Limited

[Read full review](#) 

“We use Veritas Alta Data for data protection, regardless of its location, which can be on-premises, physical, virtual, or cloud-based. Generally, the backup location depends on the databases and the backup issue. Alternatively, a connected backup is sufficient for small, medium, and enterprise clients with a limited number of clients and mostly Microsoft-related workloads, such as SQL Server or Exchange. In this case, we recommend keeping one backup copy locally and one copy in the cloud.

We implemented Veritas Alta Data to protect our data from ransomware..”

Karthik C.

[Read full review](#) 

Solutions Architect at a tech services company with 51-200 employees

“Veritas Alta Data Protection's primary use case is to back up S3 buckets and EC2 instances, containers, or mostly Redis. The primary reason we opted for Veritas Alta Data Protection is to have a DR setup in case we face a ransomware attack on our current AWS environment. It helps to have production data secured in an isolated environment or backed up in an isolated environment. If we face any sort of situation where we get a ransomware attack on our infrastructure, we will be able to restore all our production services pretty fast..”

RahulSharma8

[Read full review](#) 

Storage Platform Engineer at Expedia Group

I have not been using Veritas Alta Data Protection, but I intend to use it sometime in the near future, and I wanted to understand how this solution would help me.

I wanted to extend this to disaster recovery solutions in addition to data backup solutions, and that is where it came to my consideration, and I want to implement it for my customers.

“There could be a scenario wherein I am hosting or taking a backup on a secondary location of the current data for my customers, and I want to retrieve it in the event of a crisis should there be the need.

“I would like to have this extended to data backup as well. If I am taking a data backup and putting it in various locations, I want to first secure the data and then put the backups at certain locations.

“I want to extend Veritas Alta Data Protection to my customers. All the customers who are with us have their legacy data and enterprise data, so we want to secure the data before the backup is taken and then extend it to the data backup locations, wherever we intend to place the data backups.

“I hope Veritas Alta Data Protection will be able to be used for multi-cloud scenarios. If I have a multi-cloud setup, such as AWS and Azure, I will be able to extend this to customers from whom I can take backups at multiple locations.

“I intend to use Veritas Alta Data Protection for my customers in multi-cloud scenarios, which could be a combination of private cloud and on-premise cloud with public cloud, making it a multi-cloud and potentially a hybrid cloud scenario.
.”

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“I was not involved in the initial setup or deployment of Veritas Alta Data Protection. My senior colleagues, including my director and architect, were primarily involved. Veritas provides the deployment, and they provide a document to fill out with specific questions. We mention our details, and they guide us on deployment needs and resource counts, which is straightforward and typically does not take much time as it is infrastructure as code..”

RahulSharma8

Storage Platform Engineer at Expedia Group

[Read full review](#) 

“The initial deployment is straightforward if we know the required steps. Otherwise, it can be time-consuming to follow the documentation, but even then, it is not complex.

First, I will check the compatibility of the system and design the components that are required by the customer. Once the design is complete, we will implement the system in a hierarchical order, starting with the media servers. Finally, we will install the reporting tool so that reporting can be done later. Reporting is not as important in the initial stages, so we need to prioritize the other tasks first.

One person is enough for the deployment..”

Karthik C.

[Read full review](#) 

Solutions Architect at a tech services company with 51-200 employees

“The initial deployment was very easy.

It's a good idea to do some planning before beginning. You need a plan you can follow step by step. That's always our team strategy. Before we start, we have a plan, check it with everyone, and then move through the process. We might be planning the operation for two months. However, we often work with big domains. It's often a big operation for us.

We tend to have four people handling the deployment. We can handle big environments and multiple locations.

There is maintenance required once it is implemented. A minimum of two people tend to be required to maintain the solution..”

Adnan Yurtoglu.

Senior Consultant (NetBackup) at Yapı ve Kredi Bankası AS

[Read full review](#) 

Customer Service and Support

“The customer support is great. I would rate the technical support from Veritas at eight out of ten points. The IVR system should be reduced so that customers can reach support directly, as when someone calls, it is typically for a critical technical issue and the call should connect directly to a representative..”

ShaileshPednekar

Assistant General Manager System at Transasia Bio-Medicals Ltd.

[Read full review](#) 

“Sometimes we do need professional help from our support. I'd like to see more support in our time zone. Sometimes we have problems accessing professionals on the support team. Sometimes we have to wait a long time, which isn't acceptable as we work with a financial company and problems are often an emergency..”

Adnan Yurtoglu.

Senior Consultant (NetBackup) at Yapı ve Kredi Bankası AS

[Read full review](#) 

“Since Veritas Alta Data Protection recently entered the market, it does have limited technical resources for support. Veritas Alta Data Protection tech support primarily sits in different time zones, so when we need assistance, we often have to wait for those resources to come online. This is a challenge for me, especially since I work in APAC, and whenever we engage with Veritas technical support, I must wait for someone in the United States to be available to help with our issue. Veritas needs to improve technical support for other regions as well, which I strongly feel..”

RahulSharma8

Storage Platform Engineer at Expedia Group

[Read full review](#) 

Other Advice

“We are a Veritas partner.

Whether you have a bigger enterprise and want to protect your data, or if you're independent with a [Windows Server](#) only, this is the best solution. It works well for those with multiple databases, applications, or SaaS workloads..”

Akash Maurya

Technical Consultant (Pre-Sales) at Softcell Technologies Limited

[Read full review](#) 

“My advice for organizations considering Veritas Alta Data Protection is to make the upgrade process smoother. This is my main piece of advice at this point, along with the need for improved support in other regions. Apart from that, I have not seen anything else since we onboarded Veritas Alta Data Protection from Insights with a selected time period contract where Insights addresses the issues we face, all included in the contract. I would rate this product a ten out of ten..”

RahulSharma8

Storage Platform Engineer at Expedia Group

[Read full review](#) 

“I'm a customer and end-user. We have various setups. Some are on the cloud, some are a hybrid.

One of our policies, when we are working with the bank, is to use other tools and not just one.

I'd rate the solution ten out of ten. I trust the product. It's reliable. I like working with it. I'd invite others to work with it as well. .”

Adnan Yurtoglu.

Senior Consultant (NetBackup) at Yapı ve Kredi Bankası AS

[Read full review](#) 

“I would rate Veritas Alta Data eight out of ten.

I recommend Veritas Alta Data for larger and more complex environments. First, check the compatibility with the number of platforms to ensure they are supported. This way, we can avoid unnecessary expenditures.

The number of people required to maintain the solution is determined by the number of servers and locations. We have 17 people managing 1,000 servers per day.

Before purchasing any backup solution, make sure it is compatible with the existing systems and meets business needs..”

Karthik C.

Solutions Architect at a tech services company with 51-200 employees

[Read full review](#) 

“Backups are scheduled and run automatically. Monitoring is performed to ensure the backup and recovery processes run as scheduled.

“Veritas Alta Data Protection has an inbuilt reporting feature that is used to review backup and recovery status.

“The RPO and RTO status can be improved based on Veritas Alta Data Protection's reporting capabilities, and compliance status reporting helps significantly.

“The implementation, including the UAT phase, took approximately one and a half weeks.

“All enterprise users and IT users are involved in the backup process, particularly at the file server level. When end users encounter any issues with their day-to-day operations, data is restored and provided to them.

“The overall rating for this solution is nine out of ten..”

Sanjeevan Sivapaleswararajah

Manager, Network Ict at Associated Motorways (Private) Limited

[Read full review](#) 

Veritas Alta Data Protection is an industry leader, and I am quite impressed by the leadership that they have in this segment. I would rate them anywhere between 8.5 to 9 as of now.

Veritas Alta Data Protection is already a named leader in data protection and the features it offers, and I really hope forward that I will be able to extend the same facility and the same confidence to my customers.

“I am considering buying Veritas Alta Data Protection for my customers.

“I hope Veritas Alta Data Protection covers a facet of managed services, particularly extended for customers on the public cloud.

“I believe it will focus on data and placing the data to the respective backup locations for faster retrieval in the event of a crisis.

“I hope to see Veritas Alta Data Protection also covering cloud security posture management for [AWS](#).

“I would rate this product a 9 out of 10. .”
