Product Recap

Zebrunner Testing Platform

Zebrunner Testing Platform Recap

Zebrunner Testing Platform offers a comprehensive solution for automated testing, optimizing processes to enhance software quality and accelerate delivery. With its advanced features, it caters to different testing needs, ensuring efficiency and precision for development teams.

Zebrunner Testing Platform enables development teams to perform efficient automated testing by streamlining the testing process. It integrates seamlessly with continuous integration tools, providing real-time insights and analytics for test results. This allows teams to identify issues quickly and improve software quality. Its compatibility with different testing frameworks and collaboration features supports effective teamwork. Its customizable reporting helps teams to focus on crucial metrics to make informed decisions faster.

What are the standout features of Zebrunner Testing Platform?

- **Real-Time Test Reporting:** Provides up-to-the-minute insights into test executions, facilitating rapid identification of defects.
- **Integration Capabilities:** Supports integration with popular CI/CD tools for seamless testing workflows.
- **AI-Based Test Results Analysis:** Utilizes AI to categorize and prioritize test failures, enhancing troubleshooting efficiency.
- **Cross-Browser Testing:** Conducts thorough testing across multiple browsers to ensure consistent application performance.

What benefits or ROI should users expect from using Zebrunner Testing Platform?

- **Increased Testing Efficiency:** Saves time through automated workflows, reducing manual efforts significantly.
- **Improved Software Quality:** Early detection of defects leads to higher quality releases and reduced post-release issues.
- **Enhanced Team Collaboration:** Features aimed at integrating communication ensure better synergy among team members.
- **Scalable Testing Environment:** Easily adapt to growing testing needs without compromising performance.

In industries like finance, healthcare, and retail, Zebrunner Testing Platform implementation has modernized testing processes, enhancing compliance and security through robust test management. Customizable reporting and comprehensive analytics support operational demands efficiently, ensuring optimal performance and quality delivery.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

“Zebrunner Testing Platform has positively impacted my organization by making deployments quicker than before.”

ParthasarathyT

Senior Associate Infrastructure at Publicis Sapient

“Having everything in a single dashboard has affected our team's productivity significantly, and I would estimate that the team gained 50 to 60% more productivity after implementing this platform.”

Mansoor-Mohammed

SRE at a consultancy with 11-50 employees

“Since switching to Zebrunner Testing Platform, I notice a positive outcome in terms of time saving.”

Sk Haidar

Associate at a tech vendor with 10,001+ employees

- ✓ “Before choosing Zebrunner Testing Platform, I evaluated plenty of available solutions in the market which are higher cost and difficult to use, and not user friendly.”

Verified user

System Architect at a computer software company with 51-200 employees

- ✓ “Zebrunner Testing Platform has had a positive impact on my organization by making our automated testing process more transparent and easier to manage.”

Verified user

QA Engineer at a computer software company with 1,001-5,000 employees

What users had to say about valuable features:

“Zebrunner Testing Platform offers great features such as easy usage of the tool, allowing for creating, removing, or editing test cases; everything is user-friendly, and sharing results through Zebrunner Testing Platform is also valuable, including linking Jira tickets.

The Jira integration helps my team because if any failed test case appears during execution, we file bugs in Jira and can link the respective ticket with Zebrunner Testing Platform, making it easy for the client to understand the bug's context and from which test case it has been caught.

Zebrunner Testing Platform positively impacts my organization as we usually use it as a repository to store test cases and results, similar to TestRail; previously, we used Zephyr and TestRail tools, and now we also use Zebrunner Testing Platform..”

Sk Haidar

Associate at a tech vendor with 10,001+ employees

“The most valuable feature that Zebrunner Testing Platform offers is the real-time test execution view, which shows me the live progress, pass-fail status, streaming logs during long test durations, and streaming logs during active test runs. This is the most used feature in our team's daily workflow. The test scalability tracking classifies whether tests are stable, unstable, or consistently failing based on historical run data. This helps us manage flaky test technical debt. We use this data in our weekly engineering review to prioritize test maintenance work. The AI-powered failure classification groups similar failures by root cause patterns and has reduced the manual triage effort for large test runs significantly. The multi-framework support means we do not have to standardize on a single test framework to benefit from unified reporting, which has given us an important diverse testing stack.

“The AI-powered failure classification has impacted our team's efficiency significantly because it found historical data, analyzed patterns, and eliminated the manual pattern matching process we previously used to identify what was triggering failures and what factors were involved. The AI performed this task effectively and reduced our manual work considerably..”

Mansoor-Mohammed

SRE at a consultancy with 11-50 employees

“I am not currently using Zebrunner Testing Platform, but I am exploring it and the available products. While conducting market research, I found that Zebrunner Testing Platform is a great tool.

“Based on my research so far, the best features Zebrunner Testing Platform offers are that it is user-friendly and easy to use.

“When I say user-friendly and easy to use, I am referring to the overall experience of the platform.

“Zebrunner Testing Platform has positively impacted my organization, even if it is just from what I have seen in my research so far, as it will reduce time and cost.

“I expect Zebrunner Testing Platform to reduce time and cost. For example, automation testing can save approximately fifty percent of the time, and cost saving will definitely reduce twenty to thirty percent..”

Verified user

System Architect at a computer software company with 51-200 employees

“The best features that Zebrunner Testing Platform offers include its unified dashboard showing pass-fail rates, execution time, and trends over time, as well as storing screenshots, logs, and video recordings. For example, the QA team identifies that failures increased after a release.

“Zebrunner Testing Platform has positively impacted my organization by making deployments quicker than before. Every time there is development, there is QA testing. It used to take a considerable amount of time, but now deployment is made easier with Zebrunner Testing Platform.

“We generally take three to four days for development, deployment, QA, bug fixes, and everything, but with Zebrunner Testing Platform, we can do it in two days or even in a single day.

“Zebrunner Testing Platform is a SaaS, so everything is managed. It is a Software as a Service based on subscription. It charges based on the number of users and test execution, and also based on infrastructure usage. Its estimation ranges from thirty to two hundred dollars per user per month..”

ParthasarathyT

Senior Associate Infrastructure at Publicis Sapient

[Read full review](#) 

“Features that I find most valuable in Zebrunner Testing Platform are the automation reporting, test execution tracking, and integration with Jira and test management tools.

“What stands out to me about automation reporting in Zebrunner Testing Platform is that it brings the results from different automated test runs into one place, instead of relying only on CI/CD logs. For example, after my test regression run, I can quickly see which tests passed, failed, or were skipped, and then drill down into the individual execution to review logs and other artifacts.

“Another strong feature of Zebrunner Testing Platform is the reporting and dashboards where I can monitor the results. I also find that the CI/CD integration launchers are useful because automated suites can be triggered as part of the delivery process.

“Zebrunner Testing Platform has had a positive impact on my organization by making our automated testing process more transparent and easier to manage.

“The biggest improvement has been the time I spend analyzing automated test results after using Zebrunner Testing Platform. I estimate that the initial review and triage of regression results takes around twenty-five to thirty percent less time because the execution history, logs, and test artifacts are all available in one place..”

Other Solutions Considered

“Before choosing Zebrunner Testing Platform, I evaluated plenty of available solutions in the market which are higher cost and difficult to use, and not user friendly..”

Verified user

System Architect at a computer software company with 51-200 employees

[Read full review](#) 

“I didn't previously use a different solution; I have not used any.

Before choosing Zebrunner Testing Platform, I did not evaluate other options; there are no other options I looked into..”

Sk Haidar

Associate at a tech vendor with 10,001+ employees

[Read full review](#) 

“Before choosing Zebrunner Testing Platform, we did not evaluate other options. We looked to execute using only Selenium and managing tests only with TestRail. We did not have a proper platform such as Zebrunner Testing Platform..”

ParthasarathyT

Senior Associate Infrastructure at Publicis Sapient

[Read full review](#) 

ROI

Real user quotes about their ROI:

“I don't have any idea about return on investment related to Zebrunner Testing Platform; I haven't seen metrics such as fewer employees needed or money saved..”

Sk Haidar

Associate at a tech vendor with 10,001+ employees

[Read full review](#) 

“We have seen a return on investment, as fewer employees are needed. This allows us to avoid a massive QA team for testing; instead, CI itself performs half of the QA's functions..”

ParthasarathyT

Senior Associate Infrastructure at Publicis Sapient

[Read full review](#) 

“We have seen a return on investment with Zebrunner Testing Platform, as we saved significant time during production issues. Before implementation, we did not have the test results and metrics readily available. Having them provided proved useful..”

Mansoor-Mohammed

SRE at a consultancy with 11-50 employees

[Read full review](#) 

Use Case

“My main use case for Zebrunner Testing Platform is to add test cases, prepare test cases, develop a test plan, and execute test cycles.

In my recent project for Cipo, I used Zebrunner Testing Platform to execute the test cases manually and I need to add the results over Zebrunner; the same data I need to share with my client and in Slack.

My daily routine with Zebrunner Testing Platform involves creating test runs with the milestones and creating workspaces for different sub-projects under the main pillar..”

Sk Haidar

Associate at a tech vendor with 10,001+ employees

[Read full review](#) 

“My main use case for Zebrunner Testing Platform is managing and monitoring automated and manual testing activities in one place.

“I use Zebrunner Testing Platform for managing and monitoring testing activities to review test execution results, identify failed or unstable tests, and investigate attached logs or other execution details. When a failure appears to be an application defect rather than an automation issue, I link it to the corresponding Jira ticket for the development team. This provides the development team with test evidence and execution history. I also use the dashboards and reports to see the overall pass-fail rates, automation coverage, and recurring failures across different test runs..”

Verified user

[Read full review](#) 

QA Engineer at a computer software company with 1,001-5,000 employees

“My main use case for considering Zebrunner Testing Platform is automation, quality, and the number of test use cases to speed up the process so that we can deliver the product to customers quickly, which can help with customer satisfaction and product quality.

“One specific example of how I'd like Zebrunner Testing Platform to help with automation and speeding up my process is that we are currently doing manual testing and are looking for automation capabilities.

“I would add that my main use case for Zebrunner Testing Platform is time saving, cost saving, and product quality..”

Verified user

[Read full review](#) 

System Architect at a computer software company with 51-200 employees

“Zebrunner Testing Platform serves as our centralized test automation platform and reporting hub. As an SRE, I work with our QA and development teams to ensure that automated test execution is reliable, observable, and integrated into our CI/CD pipelines. Zebrunner serves as the execution infrastructure for our Selenium-based web UI tests and mobile tests, as well as the aggregation and reporting layers for test results across all frameworks, including JUnit, TestNG, and Cucumber tests running in our backend pipelines. The real-time test execution dashboard, rich reporting with screenshots and logs on failures, and the test scalability analytics are the features our team uses daily. We also leverage Zebrunner Testing Platform's integration with our Jira instance to automatically create and link defects from the failing tests.

“Integrating Zebrunner Testing Platform with Jira has helped us stay on track, and the tickets were raised and proved helpful for us..”

Mansoor-Mohammed

SRE at a consultancy with 11-50 employees

[Read full review](#) 

“I have been using Zebrunner Testing Platform for years. My main use case for Zebrunner Testing Platform is that it is a test automation platform designed to run, manage, and analyze automated tests at scale. It acts as a central hub for test execution, providing test orchestration such as reporting and analyzing, and infrastructure management for both cloud and on-premises environments. CI/CD integration allows me to integrate various CI/CD tools. Additionally, it has test artifact storage including logs, screenshots, and videos. In simple terms, Zebrunner executes tests, provides monitoring, and serves as an analytics platform for automated tests.

“A specific example of how I use Zebrunner Testing Platform in my daily workflow is that we integrated it with frameworks such as Selenium WebDriver, Appium for mobile testing, and Cypress for the Playwright API testing framework.

“Zebrunner Testing Platform runs automated tests in multiple environments and supports parallel execution at scale, which is the most advanced feature. It runs over 1,000 UI tests across 10 browser types simultaneously, which is the best feature.

“The unified dashboard helps me and my team, especially the QA team, to report issues more effectively. We have integrated it with CI/CD, so whenever a developer pushes code, it starts to run the test automation from Zebrunner and then sends the analytical report to our QA team. Based on that, they will raise a bug, which makes their job simpler and easier.

“Zebrunner Testing Platform is deployed in my organization as Software as a Service, so we are using the public cloud..”

ParthasarathyT

Senior Associate Infrastructure at Publicis Sapient

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“The initial integration with existing test frameworks, particularly for more customized TestNG configurations, requires non-trivial setup work, and the documentation does not cover all the edge cases we encountered..”

Mansoor-Mohammed

Associate at a tech vendor with 10,001+ employees

Customer Service and Support

“The customer support for Zebrunner Testing Platform is good because the team has been genuinely responsive and technically capable. They have a clear understanding of test automation challenges, not just their own platform, which makes conversations about integration and architecture much more productive. We had a complex integration issue with our custom test engine and listener setup earlier in our deployment period, and the Zebrunner Testing Platform team provided direct engineering support and resolved it efficiently. The product team actively solicits feedback and maintains a high release cadence, so we have seen multiple features we requested ship within one or two release cycles..”

Mansoor-Mohammed

SRE at a consultancy with 11-50 employees

[Read full review](#) 

Other Advice

“Zebrunner Testing Platform is an excellent test automation platform that solves the real prevalent problem of fragmented, difficult-to-interpret test reporting in large engineering organizations. The unified visibility, real-time execution tracking, and scalability analytics deliver genuine value. Teams running significant volumes of automated tests across multiple frameworks will find that their ability to maintain and act on their test suite sustains improvement. I would rate this solution highly overall..”

Mansoor-Mohammed

SRE at a consultancy with 11-50 employees

[Read full review](#) 

“I would rate Zebrunner Testing Platform an eight out of ten. It is a good tool, but I give it an eight because it may not fully replace tools such as [TestRail](#) or [Jira](#) Test Management.

“I choose an eight out of ten because it is not ideal for small teams, which may find it overkill if they have fewer than fifty people. The higher cost is a significant reason, and it is best suited for enterprise QA teams with larger automation sets, such as one thousand or more tests, particularly for DevOps-driven companies.

“My advice to others looking into using Zebrunner Testing Platform is that if you are in a proper enterprise organization with a large amount of QA, you can definitely use Zebrunner Testing Platform without hesitation. I rate Zebrunner Testing Platform an eight out of ten overall..”

ParthasarathyT

Senior Associate Infrastructure at Publicis Sapient

[Read full review](#) 

“Since switching to Zebrunner Testing Platform, I notice a positive outcome in terms of time saving.

When comparing our previous tool to Zebrunner Testing Platform, I estimate that my team saves about one hour, allowing us to easily complete our assigned tasks one hour earlier.

My advice for others looking into using Zebrunner Testing Platform is to explore the whole platform and know its features; then only can they easily use the software.

My company does not have a business relationship with this vendor other than being a customer.

I have no additional thoughts about Zebrunner Testing Platform before we wrap up.

I rate Zebrunner Testing Platform around eight out of ten because, as I've mentioned, we need some more improvements in Zebrunner Testing Platform, such as adding a few more statuses..”

Sk Haidar

Associate at a tech vendor with 10,001+ employees

[Read full review](#) 

“I think that Zebrunner Testing Platform takes a sensible approach to AI governance and security.

“I rate the accuracy of Zebrunner Testing Platform's AI-assisted output as good, particularly for helping with test result analysis and identifying patterns across executions. It can speed up the initial investigation by highlighting information that might otherwise take longer to find manually.

“I would recommend Zebrunner Testing Platform to teams that have a mix of automated testing and regular regression cycles and want better visibility into their test results. Before adopting Zebrunner Testing Platform, I would suggest starting with one or two representative test suites and checking how well the integrations fit your existing CI/CD and test management workflow.

“I rated this review eight out of ten..”

Verified user

QA Engineer at a computer software company with 1,001-5,000 employees

[Read full review](#) 

“My advice to others looking into using Zebrunner Testing Platform is that they can explore and choose this option. It can definitely be user-friendly, provide return on investment, and help people save time and do end-to-end testing to their applications. It is cloud integrated, which is a value add to the product.

“I have covered everything about Zebrunner Testing Platform that I wanted to discuss.

“I would add that I am exploring whether artificial intelligence can be integrated with Zebrunner Testing Platform. That would definitely be a great value add for our project and for future products.

“My experience with pricing, setup cost, and licensing while researching Zebrunner Testing Platform is that I need further clarification.

“I gave this review a rating of seven out of ten..”

About PeerSpot

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
