Product Recap

Acquia Digital Experience Platform (DXP)

Acquia Digital Experience Platform (DXP) Recap

Acquia Digital Experience Platform (DXP) is a comprehensive suite designed to facilitate content management, site building, and digital marketing. It integrates various tools to deliver personalized customer experiences across different digital channels.

What key features does Acquia DXP offer?

- **Content Management System (CMS):** Built on Drupal, it offers robust content management capabilities that enable users to create, manage, and optimize digital content easily.
- **Personalization:** Acquia DXP includes tools like Acquia Lift, which allow for the creation of personalized experiences for users based on their behavior and preferences.
- **Cloud Platform:** Acquia Cloud provides a secure, scalable, and high-performance hosting environment optimized for Drupal.
- **Digital Asset Management:** The platform integrates Acquia DAM, facilitating efficient management and sharing of digital assets across marketing teams.

What are the benefits of using Acquia DXP?

The platform's personalization capabilities ensure that each user receives a tailored experience, which can lead to increased engagement and satisfaction. The cloud-based architecture ensures that the platform can scale according to the needs of the business, handling traffic spikes efficiently. Finally, Acquia DXP provides enterprise-level security features and complies with various regulatory requirements, ensuring that user data is protected.

How is Acquia DXP implemented across different industries?

Acquia DXP is versatile and can be implemented across various industries such as retail, media, government, and education. For instance, in retail, it can power e-commerce platforms, providing a seamless shopping experience with personalized content and customer interaction.

What should you know about Acquia DXP's pricing and support?

Acquia offers a subscription-based pricing model that typically includes the costs for the platform's core services, support, and hosting. The company provides comprehensive support, including 24/7 customer service, dedicated account management, and professional services to assist with implementation and ongoing management.

Acquia DXP is an all-encompassing digital experience platform that provides robust tools for

content management, personalization, and digital asset management, designed to enhance user engagement and operational efficiency across various industries.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

- ✓ “After migrating to DXP, the results were dramatic, including a 70-plus percent increase in conversion rate and a 30-plus percent increase in online booking revenue.”

Talish Khan

Drupal Architect at a tech services company with 501-1,000 employees

- ✓ “Based on my experience with their services, Acquia Cloud that we have been using, or Acquia hosting, is next to a native solution for Drupal projects, making it probably one of the best hosting solutions available, even though it has its flaws and we eventually had to shift to another one.”

Verified user

Senior Developer

- ✓ “Because for every new site that I have to spin up, it uses the same governed components, it makes it faster, launches with zero brand drift, and editors never need a developer for day-to-day page building.”

Aziza Anwari

Software Engineer at a energy/utilities company with 10,001+ employees

- ✓ “Acquia Digital Experience Platform (DXP) has positively impacted my organization primarily through its ease of use, making it easier to generate content and pages, especially from a marketing perspective, so entry-level people can access it and utilize it as well as advanced users, appealing to a range of people.”

John Venpin

Founder at Intelligensi.ai

- ✓ “Acquia Digital Experience Platform (DXP) offers the ability to provide a managed services cloud hosting environment for Drupal CMS, which is an open-source platform and can be a challenge to maintain independently due to the frequent updating and security patching required.”

Mark Aceves

digital product owner

- ✓ “Overall, Acquia Digital Experience Platform (DXP) helps improve operational efficiency, release confidence, and customer experience.”

Vyas Shubham

Senior Quality Analyst at a consultancy with 51-200 employees

“Building pages using Site Studio components was very easy, and using Acquia Digital Experience Platform (DXP) for our website and project was really great.”

Verified user

Developer at a tech vendor with 10,001+ employees

What users had to say about valuable features:

“Acquia Digital Experience Platform (DXP) is unique in my projects because it easily integrates with Acquia Site Factory and the cloud, making hosting simpler and allowing us to create and launch new sites easily.

The best feature Acquia Digital Experience Platform (DXP) offers is Acquia Site Studio, which provides drag-and-drop features with inbuilt components we can use to build pages, add styles and JavaScript, and various elements based on our requirements.

Out of all the features, my team and I find ourselves using Acquia Site Studio the most, and it makes our day-to-day work easier as we use it almost every day..”

Hardik Chauhan

Senior Software Consultant at a outsourcing company with 1,001-5,000 employees

[Read full review](#) 

“In my opinion, the best features Acquia Digital Experience Platform (DXP) offers are website hosting, CI/CD pipelines, automated testing capabilities, and flexible deployment workflows because those are the tools I use most on a daily basis.

The deployment workflows in Acquia Digital Experience Platform (DXP) are very easy to use. We have an integration with Jenkins where we make a build to create an artifact, and then we deploy to Acquia Digital Experience Platform (DXP) and all the pipeline runs there.

Acquia Digital Experience Platform (DXP) is very easy to use, and all of the team can perform well while using it. It is really accessible for all team members, so we have people working with front-end and Site Studio, and developers working with CI/CD pipelines.

The ease of use and the accessible log tools of Acquia Digital Experience Platform (DXP) make the team faster to debug things and deploy changes to the client website, so it really helps us. It is really easy to use and very useful..”

Verified user

Software Developer at a outsourcing company with 1,001-5,000 employees

“The best features Acquia Digital Experience Platform (DXP) offers include good documentation, which provides a lot of guides to help when you are new. If my company partners with Acquia, they offer training and sessions. If I encounter issues, they will quickly resolve them and give feedback regarding what went wrong, which is helpful support. The predefined components and templates make it easier to maintain the site, and the style guide and style guide managers are also really helpful.

Acquia Digital Experience Platform (DXP) has positively impacted my organization by enabling us to create sites pretty quickly. We are able to deliver many clients swiftly. Before using Acquia Digital Experience Platform (DXP), we might manage two projects a year, but now we can deliver four to five projects and provide more features for each client. Previously, time restrictions were a constraint, but now we can deliver much more within a limited time..”

Gurramkonda Yaswanth

Senior Software Analyst at a computer software company with 201-500 employees

[Read full review](#) 

“Based on my experience with their services, Acquia Cloud that we have been using, or Acquia hosting, is next to a native solution for Drupal projects, making it probably one of the best hosting solutions available, even though it has its flaws and we eventually had to shift to another one.

What makes Acquia hosting next to native for Drupal projects is basically the ease of integration, as Acquia and Drupal are very densely interconnected.

Acquia Digital Experience Platform (DXP) has positively impacted my organization primarily by ensuring that our services based on Drupal were available 24/7 in all countries that are a priority for our customer. I believe they provided a really good service, with some exceptions.

We have had almost all the metrics in the dashboard to measure this positive impact, including how many visitors we have over time, how big the load is on the infrastructure, and how the whole thing works. We have been monitoring this..”

Verified user

Senior Developer

[Read full review](#) 

“In my experience, the best features Acquia Digital Experience Platform (DXP) offers include being a strong enterprise platform, especially if you are already in the Drupal ecosystem, with solid governance, scalability, and structured content capabilities, particularly for organizations with multiple teams and sites, and I really enjoyed the multi-use aspect of it, as that is where it really comes into its own.

What I appreciated most about the multi-use aspect is that you can work on the same project together and collaborate, which is really useful.

Acquia Digital Experience Platform (DXP) has positively impacted my organization primarily through its ease of use, making it easier to generate content and pages, especially from a marketing perspective, so entry-level people can access it and utilize it as well as advanced users, appealing to a range of people.

That ease of use translated into tangible benefits for my team in terms of improved productivity because you can create a whole marketing campaign really quickly, making marketing happen very effectively..”

John Venpin

Founder at Intelligensi.ai

[Read full review](#) 

“I personally appreciate several features about Acquia Digital Experience Platform (DXP), particularly its enterprise-grade cloud hosting and environment management capabilities. The consistency across development, staging, and production environments is extremely helpful for reducing development-related issues and making testing more reliable. The integration with Drupal and flexibility for managing complex digital experiences are also valuable, as the content management workflow, role-based permissions, and publishing controls help my technical and non-technical teams collaborate efficiently. I appreciate the CI/CD and deployment pipeline support, which makes release validation smoother and accelerates the testing cycle. Performance optimization features, including caching mechanisms, CDN support, monitoring tools, and automated backups, are very beneficial for my team. Additionally, Acquia Digital Experience Platform (DXP) security and stability capabilities are crucial for enterprise projects, as the platform efficiently handles high traffic and provides a secure infrastructure, giving us confidence during large-scale deployments and production releases.

“Acquia Digital Experience Platform (DXP) has positively impacted my organization by improving deployment stability, streamlining the content management workflow, and enhancing collaboration between technical and business teams. One notable improvement is better release management and reduced deployment-related issues since the platform provides consistent cloud environments and structured CI/CD support, allowing QA and development teams to perform testing more efficiently and identify issues earlier in the release cycle. This reduces production incidents and improves the overall quality of releases. Improved website performance and reliability are also significant, as features including caching, CDN integration, and monitoring tools contribute to maintaining stable performance even during high-traffic periods, leading to fewer downtime issues and better end-user applications. From a business perspective, the organization benefits from faster content updates, improved website stability, and a more scalable infrastructure capable of supporting future growth and digital initiatives. Overall, Acquia Digital Experience Platform (DXP) helps improve operational efficiency, release confidence, and customer experience..”

Vyas Shubham

Senior Quality Analyst at a consultancy with 51-200 employees

[Read full review](#) 

Other Solutions Considered

“For the projects that have been in Acquia, I believe it was initially built in Acquia, and we moved to another service. I have also been using other services that provide the same kind of service, usually requiring a bit more custom work on our side. Acquia itself is basically a kind of native solution for Drupal projects..”

Verified user

Senior Developer

“Before choosing Acquia Digital Experience Platform (DXP), I was not the decision maker, but other options evaluated included Adobe Experience Manager and Sitecore..”

Gurramkonda Yaswanth

Senior Software Analyst at a computer software company with 201-500 employees

[Read full review](#) 

“Before choosing Acquia Digital Experience Platform (DXP), I evaluated other options because there were options, such as Pantheon and others. However, I think Acquia was a good choice, so we opted for that..”

Aziza Anwari

[Read full review](#) 

Software Engineer at a energy/utilities company with 10,001+ employees

“Yes, as part of the company process, we are always looking at the strengths and weaknesses of the market offer to advise our customers and develop skills around them. I have been involved in integrating and developing Oracle's Colud application for Digital Experience and Customer Experience, Adobe AEM and the Marketing Suits, and several others for several years. Technology is becoming a commodity per- ce in its features and capabilities, especially if it is a SAAS or PAAS solution, a trend in the last few years. So, the main difference is how they compile for the market you are in and how well their value satisfies your customers' needs. .”

Adrian Campanelli

[Read full review](#) 

Director at Realmedia Network

“Before using Acquia Digital Experience Platform (DXP), we used plain Drupal and faced hosting issues.

In plain Drupal, the hosting problems were significant, but after moving to Acquia Digital Experience Platform (DXP), we have access to Acquia Cloud and pipelines, making deployment easier and faster, with continuous testing and useful tools including modules and Acquia Site Studio..”

Hardik Chauhan

Senior Software Consultant at a outsourcing company with 1,001-5,000 employees

[Read full review](#) 

“I have definitely used a different solution before adopting Acquia Digital Experience Platform (DXP). The organization was using a more traditional self-managed content management and hosting setup based primarily on Drupal and separately managed infrastructure and development processes. Compared to the previous setup, Acquia Digital Experience Platform (DXP) provides a much more centralized and enterprise-focused platform with better cloud hosting, development, deployment management, scalability, and operational support. Earlier teams had to spend more effort managing environments, handling development coordination manually, and troubleshooting infrastructure-related issues. One main reason for switching was the need for a more scalable and reliable enterprise digital experience platform that could support growing business requirements, faster release cycles, and improved website performance..”

Software Developer at a outsourcing company with 1,001-5,000 employees

“I have seen a return on investment since earlier we relied heavily on developers on an ongoing basis. When we wanted to rearrange components within the templates, we had to rely on tickets, and more developers were needed. Now, it is a one-time activity, allowing more marketers to simply assemble the components as they need..”

Talish Khan

Drupal Architect at a tech services company with 501-1,000 employees

[Read full review](#) 

“I have seen a return on investment from using Acquia Digital Experience Platform (DXP). Delivering thirty-two sites in a year directly saves a lot of money. The management of sites and everything involved reduces the number of engineers needed to build it as well, so it has definitely been beneficial. They provide end-to-end services, including hosting, caching, cloud, database, and asset management, which are significant advantages..”

Gurramkonda Yaswanth

Senior Software Analyst at a computer software company with 201-500 employees

[Read full review](#) 

“On highly demanding traffic sites of large organizations with several digital channels, different brands, or assets that need to be healthy governance by efficient teams concerned with what they publish, the quality of the information, and the performance of their digital products, the ROI is over 40%/Y or high when you quantify the easy and quick to go life with any modification. .”

Adrian Campanelli

Director at Realmedia Network

[Read full review](#) 

“We have definitely observed a positive return on investment after using Acquia Digital Experience Platform (DXP), particularly in terms of operational efficiency, deployment stability, and reduced manual efforts. One of the biggest improvements is the reduction of deployment and environment-related issues because the platform provides a more stable and standardized environment. Our QA and development teams spend less time troubleshooting configuration inconsistencies and release failures, which helps reduce overall testing and release validation time by approximately twenty-five to thirty percent. We have also seen improvements in release efficiency and collaboration, as development-deployment coordination between development, QA, and content teams has become more streamlined, shortening the release cycle and allowing faster delivery of website updates and new features. While the organization may not have directly reduced headcount, the platform has definitely improved team productivity, reduced the time spent on repetitive operational tasks, and increased confidence during enterprise-scale deployments. Overall, the ROI is visible through time savings of around fifteen to twenty percent, and it has also improved release quality and efficient cross-team collaboration..”

Use Case

“Our main use case for Acquia Digital Experience Platform (DXP) is to build our company's marketing website in the previous two organizations, where we built components that the marketing team can use to create landing pages and all types of pages.

One specific project that stands out is my company's marketing website, where we had various content types including news, articles, and insights. Acquia Digital Experience Platform (DXP) was very helpful in managing different types of content with separate fields so that the non-technical marketing team could easily use the components we built and create the landing pages and features they wanted..”

Hardik Chauhan

Senior Software Consultant at a outsourcing company with 1,001-5,000 employees

[Read full review](#) 

“My main use case for Acquia Digital Experience Platform (DXP) is as the founder of intelligency.ai, where we build AI-driven integrations across CMSs and digital experience platforms, and we have evaluated Acquia Digital Experience Platform (DXP), particularly in the context of Drupal-based enterprise environments.

A quick, specific example of how I used Acquia Digital Experience Platform (DXP) in one of my projects is that we built an instance of it that is marketing-specific and then we used some of our applications to interact with that particular instance.

My applications interacted with Acquia Digital Experience Platform (DXP) in that marketing-focused instance by sending content and images that we have generated from one platform to another..”

John Venpin

Founder at Intelligensi.ai

[Read full review](#) 

“Our main use case for Acquia Digital Experience Platform (DXP) is hosting our Drupal projects, covering a range from Drupal 7 to Drupal 10 or even 11. We used it for hosting and ensuring that our services are available 24/7 all over the world.

We work with a rather big engineering company presented in about 50 countries with thousands of people in their workforce. We focused on their main marketing site that provides information on their services and products, which has been hosted on Acquia for quite a long time.

I should clarify that I probably was not using directly Acquia Digital Experience Platform (DXP) in the way it is marketed at the moment on Acquia's site, which seems to be a no-code, low-code solution. We have been hosting our own Drupal websites that were specifically built for Acquia platform hosting, and we have extensively used Acquia services, which were rather good in general. However, at some point, we had to shift to another platform.

At some point, the pricing was higher than what our customer was willing to pay for the quality of service at that moment..”

Verified user

Senior Developer

[Read full review](#) 

“I have been using Acquia Digital Experience Platform (DXP) for approximately one and a half to two years.

I typically use Acquia Digital Experience Platform (DXP) for tools such as Acquia Cloud, Site Studio, and website hosting, as well as for development practices including CI/CD pipelines and automated testing.

Most of my use with Acquia Digital Experience Platform (DXP) is with Site Studio, where I use it to build prototypes and web pages. My full website revolves around Site Studio. I also use the CI/CD and hosting capabilities so that I can deploy website changes, and Acquia takes care of all the CI/CD, testing, and hosting.

Since my website is 100% built around Drupal, Acquia Digital Experience Platform (DXP) is the best place to host my website. One of the platform's key strengths is its ability to unify content management, personalization, and customer data into a single experience layer, enabling my team to build highly tailored digital journeys across multiple channels for enterprise websites like the one I work for, as well as e-commerce integrations and customer portals..”

Verified user

[Read full review](#) 

Software Developer at a outsourcing company with 1,001-5,000 employees

“My main use case for Acquia Digital Experience Platform (DXP) is that I have primarily used Acquia Site Studio and Site Factory. Site Factory is an Acquia product itself, where we manage the sites, including creating the site, managing the site URL, clearing the cache, logging, user addition, and everything related to the site. In one place, you can manage a lot of sites. It is easy to manage many partner sites, especially when a company has a lot of them. My client had many partner sites, which is why I use Site Factory to manage those. For each site, we use Site Studio. Site Studio provides default components and templates, allowing you to have many options and features to create, customize components, and templates, and reuse them to build pages across other sites as well. This makes site creation faster and easier to maintain. Because of these reasons, we opted for those, and I have delivered two projects with these tools.

Acquia Site Factory and Site Studio helped my team manage multiple sites by allowing us to build a corporate site entirely, after which we reused the components from the corporate site in the partner sites. We reused everything, which is how Acquia Site Factory helped us. You can create a new site with the same profile; for a corporate site, you can use a different profile, and for a partner site, you can use another. The user interface in Site Factory allows you to see those options. Once the corporate site was ready and the profiles were divided, we just clicked to create a new site, named it, set the URL, and selected the needed profile. With that, many predefined components and templates associated with that profile came along. We then revamped the site using the style guide, which specifies a specific logo and colors for each partner site. The site will be ready in about twenty to thirty minutes using these profiles and components..”

Gurramkonda Yaswanth

Senior Software Analyst at a computer software company with 201-500 employees

[Read full review](#) 

“I have been using Acquia Digital Experience Platform (DXP) for the last two and a half years as part of my role as a QA engineer, and during this time, I have worked on testing web applications, validating deployments across environments, and also performing regression and functional testing, collaborating with the development and DevOps teams to ensure stable releases and smoother experiences.

“My primary use case for Acquia Digital Experience Platform (DXP) is supporting enterprise-level website and digital experience testing within our QA environment, where I mainly use the platform for validating web application functionality, content workflow, deployment stability, and overall user experience across multiple environments. As a QA engineer, I work closely with developers, business teams, and content authors to ensure website releases are functioning correctly before production deployments. Another important use case is validating multiple environment deployments and release management processes, since Acquia Digital Experience Platform (DXP) provides structured cloud hosting and deployment pipelines, which we use extensively for testing staging and production readiness, ensuring minimum downtime and a stable release.

“One scenario that stands out is in one of our enterprise website projects, where we use Acquia Digital Experience Platform (DXP) to manage and deploy a large customer-facing Drupal-based portal that handles content publishing, user interface, user interactions, and third-party integration. My role as a QA engineer is to validate the complete release cycle before production deployment, including testing newly developed features, verifying the content workflow, and ensuring stability across development, staging, and production environments. During a major website enhancement release, where multiple modules, API integrations, and UI builds were deployed simultaneously, I used Acquia Digital Experience Platform (DXP) environment to manage the deployment pipeline for regression testing, validating cache behavior, and verifying role-based access permissions, ensuring content synchronization was functioning correctly. I also tested integration with analytic tools and external APIs to confirm that customer data and tracking events were working correctly after deployment. The platform provided a consistent cloud environment and monitoring support, allowing me to identify issues early and significantly reduce deployment risk..”

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

In the past, I found the pricing of Acquia Digital Experience Platform (DXP) to feel somewhat steep despite using an open-source platform, but setup and licensing were handled by other groups.

“My advice for others looking into using Acquia Digital Experience Platform (DXP) is to first go through the official documentation. If you are a partner, take advantage of the training provided before diving in. I would rate Acquia Digital Experience Platform (DXP) an eight out of ten..”

Gurramkonda Yaswanth

Senior Software Analyst at a computer software company with 201-500 employees

[Read full review](#) 

“The advice I would give to others looking into using Acquia Digital Experience Platform (DXP) is that it's a positive experience. If you have large, enterprise-based websites, you can opt for it, and it will be a good purchase. However, if you have a very small site or a smaller solution, I don't think it's optimal given the price, as it's a little steeper. I would rate this product an 8 out of 10..”

Aziza Anwari

Software Engineer at a energy/utilities company with 10,001+ employees

[Read full review](#) 

“My advice for others looking into using Acquia Digital Experience Platform (DXP) is that it is a robust and scalable digital experience platform that stands out for its strong integration with Drupal, its cloud-native architecture, and from a developer's perspective, it provides a well-structured ecosystem that supports modern development practices, including CI/CD pipelines, automated testing, and flexible deployment workflows. One of the key strengths is its ability to unify content management, personalization, and customer data into a single experience layer, enabling my team to build highly tailored digital journeys with less time, very fast delivery, and higher quality in all deliveries. I gave Acquia Digital Experience Platform (DXP) an overall review rating of 10 out of 10..”

Verified user

Software Developer at a outsourcing company with 1,001-5,000 employees

[Read full review](#) 

“The project started before me, so I am not quite sure exactly what options were evaluated.

On a scale of 1 to 10, I would rate Acquia Digital Experience Platform (DXP) overall

around eight, as I said before, as it is mostly about Acquia Cloud, not DXP as it is marketed at the moment. The results on our project affected the grade quite a lot, making it lower, but for a Drupal site, it is still a very good solution.

I choose the number eight because we had to move from this platform, which was something that convinced us to make that decision, and this is why I cannot say 10. Considering all other projects that succeeded on their platform, I believe that it is still a good solution, specifically for Drupal-based projects.

My overall rating for Acquia Digital Experience Platform (DXP) is 8 out of 10..”

Senior Developer

[Read full review](#) 

“As an experienced user, I have a few recommendations for others considering Acquia Digital Experience Platform (DXP). First, they should evaluate their long-term digital experience and scalability requirements before implementing Acquia Digital Experience Platform (DXP), as the platform is particularly well-suited for enterprise environments that need strong content management capabilities and scalable cloud infrastructure. I also recommend investing time in proper planning, architectural design, and onboarding during the initial implementation phase. Since Acquia Digital Experience Platform (DXP) offers many enterprise-level features, having a well-defined workflow for development and establishing strong testing and release management processes early—especially around environment management, CI/CD pipelines, regression testing, and performance validation—are essential because the platform performs best when organizations follow structured deployment and governance practices.

“I want to highlight Acquia Digital Experience Platform (DXP) ability to support collaboration across multiple teams, including developers, QA engineers, content editors, and business stakeholders. The platform's structured workflow improves coordination during releases and content updates, and I appreciate its flexibility

and extensibility, as enterprise projects often require custom integrations and evolving business requirements. Acquia Digital Experience Platform (DXP) makes it easier to scale applications and adapt to new functionalities without major disruption. The monitoring and reporting capabilities help the team quickly identify performance or deployment-related issues, improving troubleshooting efficiency and maintaining overall application quality. The platform offers a good balance of content management, cloud infrastructure, deployment automation, security, and scalability, making it well-suited for enterprise digital experience projects.

“Regarding governance and security, I think that the capabilities are quite strong, especially for enterprise environments where compliance, access control, and content security are critical. The platform provides structured role-based access control, permission management, and environment-level security, helping organizations maintain proper governance across development, QA, content, and production teams. This is particularly useful in large projects where multiple stakeholders are involved in content publishing and development workflows. Acquia Digital Experience Platform (DXP) focuses on secure infrastructure and centralized management, which helps organizations maintain better control over data access and content handling. The platform's cloud hosting, monitoring, backup management, and security practices contribute to overall operational reliability and risk reduction. As AI capabilities continue evolving across digital experience platforms, there is still room for enhancement in areas such as more advanced AI governance visibility, centralized AI activity reporting, and deeper transparency into AI-driven recommendations or automation behavior.

“The accuracy and reliability of output related to AI capabilities and automated recommendations are generally reliable and helpful for improving digital experience management and content operations. The outputs are usually accurate for common use cases such as content personalization, recommendations, search optimization, and customer experience enhancement. The platform performs effectively with structured data and properly configured workflows, and AI-driven features help teams improve content targeting and user engagement efficiency. From a QA perspective, I find that AI-assisted functionality is reasonably consistent and stable during validation and testing activities. The

recommendations and automated behavior generally align with configured business rules and expected workflows, maintaining predictable application behavior. I also believe that there is room for improvement in transparency and explainability of AI-generated outputs; more detailed visibility into how recommendations are generated and stronger reporting around AI decision-making would help my team validate results more confidently. Overall, I would say that the AI capabilities are dependable for enterprise-level digital experience use cases, especially when combined with proper governance, testing, and human oversight.

“I advise other organizations to fully utilize Acquia Digital Experience Platform (DXP) monitoring, caching, security, and supporting features, as these provide significant operational value and help maintain proper stability and performance for their organizations. I would rate this product an eight out of ten overall..”

About this buyer's guide

Thanks for downloading this PeerSpot report.

The summaries, overviews and recaps in this report are all based on real user feedback and reviews collected by PeerSpot's team. Every reviewer on PeerSpot has been authenticated with our triple authentication process. This is done to ensure that every review provided is an unbiased review from a real user.

Get a custom version of this report... Personalized for you!

Please note that this is a generic report based on reviews and opinions from the collective PeerSpot community. We offer a [customized report](#) of solutions recommended for you based on:

- Your industry
- Company size
- Which solutions you're already considering

The customized report will include recommendations for you based on what other people like you are using and researching.

Answer a few questions in our short wizard to get your customized report.

About PeerSpot

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
