Product Recap

Perception Point Advanced Email Security

Perception Point Advanced Email Security Recap

Perception Point Advanced Email Security is a cutting-edge platform designed to safeguard email communications with extensive threat detection and efficient response capabilities, leveraging AI and machine learning for advanced protection against email threats.

Focusing on dynamic multi-layer threat detection, Perception Point Advanced Email Security provides robust protection against phishing, spam, and malicious content. Its powerful anti-phishing capabilities, account takeover protection, and AI-driven analysis enhance email security in both hybrid and cloud-based environments. The platform offers real-time scanning, detailed threat analysis, and low false positives, further augmented by an efficient incident response team. While the solution excels at improving operational efficiency and user experience, it seeks enhancements in reporting, policy customization, integration with tools like XDR and SIEM, and spam filtering. Organizations benefit from Perception Point's strong reporting capabilities and easy integration options, though improvements in analysis speed, spam filtering, and more intuitive interfaces are desired.

What are the key features of Perception Point Advanced Email Security?

- **Dynamic Multi-layer Threat Detection:** Advanced AI and ML-driven systems for comprehensive threat analysis.
- **Real-time Scanning:** Continuous scanning to detect and neutralize threats instantly.
- **Account Takeover Protection:** Safeguards against unauthorized account access and compromise.
- **AI-driven Anti-phishing:** Employs AI to identify and block phishing attempts effectively.
- **Incident Response Team:** Provides immediate support and quick resolution of security incidents.

What benefits should users consider when evaluating this solution?

- **Improved Efficiency:** Streamlines email security operations with real-time threat detection.
- **Enhanced User Experience:** Reduces false positives for accurate threat detection.
- **Strong Reporting:** Offers in-depth insights into threat landscapes and security status.
- **Easy Integration:** Seamlessly connects with existing systems for improved security posture.

Organizations in compliance-focused industries, especially those utilizing cloud-based platforms like Office 365, benefit significantly from Perception Point's comprehensive scanning and filtering features. Leveraging its sandboxing and API capabilities, they achieve

deeper threat analysis, meeting regulatory requirements while exploring additional features for collaboration and file-sharing security.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

- ✓ “Perception Point Advanced Email Security offers graphical reporting options with strong reporting capabilities, and I can recommend the product and would prioritize it as a first or second choice when recommending to customers or during presales activities.”

GOUTHAMKRISHNA

Senior Security Analyst at a security firm with 11-50 employees

- ✓ “With the features, functionalities, and detection capabilities that FortiMail Workspace Security provides, it is worth the investment.”

GOUTHAMKRISHNA

Senior Security Analyst at a security firm with 11-50 employees

- ✓ “Perception Point Advanced Email Security has positively impacted my organization by reducing risk, improving operational efficiency, and creating a better end-user experience.”

Verified user

Security analyst at a outsourcing company with 501-1,000 employees

- ✓ “Perception Point Advanced Email Security has helped address specific email threats within my organization.”

GraftonCole

IT at a retailer with 11-50 employees

- ✓ “Perception Point Advanced Email Security has a correct price point and offers very good email filtering capabilities.”

Verified user

Works

- ✓ “Scalability-wise, I rate the solution a ten out of ten.”

Jijin Joseph

Technical Director at Channelnext

- ✓ “After integration, the tool is very easy to use. I had a problem with scripts for one customer, but my team did the integration for other customers without issues. So, I think I made a mistake in my integration. Both inline and API work fine.”

Fabio Amorim Araujo

Founder at Envisionare Solucoes em Tecnologia

What users had to say about valuable features:

“The most valuable feature is the technical support services. They are doing a notable work. We can easily send requests to resolve issues in case of malicious attacks. Their response time is good. Additionally, the user interface is accessible. Even users from non-technical backgrounds can easily understand the status and nature of emails, whether they're spam, phishing, or malicious. This user-friendliness stands out as a significant positive point..”

GOUTHAM KRISHNA P S

Senior Information Security Analyst at channelnext

[Read full review](#) 

“After integration, the tool is very easy to use. I had a problem with scripts for one customer, but my team did the integration for other customers without issues. So, I think I made a mistake in my integration. Both inline and API work fine.

The features that help detect threats in emails are easy to use. For example, finding out if emails are spam or malicious is simple in security operations. If they're not spam, it's easy to refresh the customer database. The detection and response capabilities are very good, especially for zero-day threats..”

Fabio Amorim Araujo

Founder at Envisionare Solucoes em Tecnologia

[Read full review](#) 

“The features that I find most valuable in Perception Point Advanced Email Security include the account takeover attempt detection, which is worth mentioning. Recently, they introduced people posture and partner posture, which functions as a kind of SSPM, SaaS security posture management, especially for the users. For our users, we can identify any high-risk users or any account takeover items coming for our users, and those features are excellent and recently included in Perception Point Advanced Email Security.

“The multi-layered threat detection is working well, and it is a very good feature. Multi-layered detection has introduced many algorithms, and it is being updated every day.

“I believe the anti-phishing feature is also good, as it is utilizing phishing AI and ML technology combined with image recognition technology. It is working as expected..”

GOUTHAMKRISHNA

Senior Security Analyst at a security firm with 11-50 employees

[Read full review](#) 

“They run us through about seven layers of protection, and the reporting is excellent. I found it to be very effective.

“It has a very high level of protection with Perception Point Advanced Email Security. They continually modernize their surveillance. They use a lot of AI. They run it through several layers of detection, deep packet inspection, which takes a lot of horsepower. I just think it is a good system.

“Perception Point Advanced Email Security has helped address specific email threats within my organization. I get weekly reporting, and by doing that, I can go and talk to these people directly and make them aware of how many attacks they had and where the attacks are coming from and not only the source of the email, but what category of emails that they are receiving. With the combination of KnowBe4 PhishER, I think it is a good security process that we have in place..”

GraftonCole

IT at a retailer with 11-50 employees

[Read full review](#) 

“The best features Perception Point Advanced Email Security offers are its multi-layer dynamic scanning and anti-evasion technology.

“The multi-layer dynamic scanning and activation technology have helped me significantly. When we receive a malicious email, the multi-layer dynamic scanning is an extra capability that Defender does not have, giving us better results in some cases.

“Perception Point Advanced Email Security has positively impacted my organization by reducing risk, improving operational efficiency, and creating a better end-user experience.

“Operational efficiency improves because the platform is highly effective and contains threats automatically, resulting in a very low false positive rate. Our security operation center team spends far less time on triage and manual investigation of routine email alerts. For a better end-user experience, users are less exposed to harmful emails, which leads to fewer incidents of clicking malicious links..”

Verified user

[Read full review](#) 

Security analyst at a outsourcing company with 501-1,000 employees

“I have been working with Perception Point Advanced Email Security for the last three years and have witnessed considerable improvements on the product side. The R&D team has enhanced the platform significantly by adding features such as People Posture, Security Posture, and Threat Intelligence. The platform continues to improve daily, and following the acquisition by Fortinet, I can see substantial improvements.

“The account takeover feature in Perception Point Advanced Email Security is exceptional, and it has been integrated with People Posture. Account takeover is now combined with the Identity and Access Management of Office 365 or G Suite, providing a comprehensive threat intelligence dashboard that correlates ATO attempts with Identity and Access Management data from the tenant.

“Multi-layer detection in Perception Point Advanced Email Security functions effectively, though the underlying technology remains unchanged. The seven-layer technology is patented and remains consistent. However, improvements are occurring through algorithm updates daily. The algorithms leverage machine learning technology and are continuously updated as attack scenarios evolve. The detection is seamless, though no changes have been made to the layers themselves.

“Perception Point Advanced Email Security has a strong anti-phishing module that addresses both traditional phishing and qishing attempts. The QR code-based phishing attempts can be reversed using image recognition technology and zero-day technology. Any phishing zero-day attacks can be easily prevented. Compared to other products, the false positive rates are significantly lower in Perception Point Advanced Email Security.

“I would rate the effectiveness of Deep Content Disarm in Perception Point Advanced Email Security at 8.5 out of 10. I give this rating because of the recent improvements in the product and the significant effort the company is investing in R&D, which instills confidence in the product.

“Perception Point Advanced Email Security offers graphical reporting options with strong reporting capabilities. I can recommend the product and would prioritize it as a first or second choice when recommending to customers or during presales

activities.

“The sandboxing feature in Perception Point Advanced Email Security functions effectively, though the technology itself has not changed. The product includes two-level sandboxing: application level and CPU level. At the CPU level, both Mac and Windows CPU sandboxing are available. No technological changes have occurred in this area, though updates are continuously implemented, including pre-execution sandboxing and filtration improvements. The algorithms are updated daily..”

GOUTHAMKRISHNA

Senior Security Analyst at a security firm with 11-50 employees

Other Solutions Considered

“I have previously used IRONSCALES. When comparing IRONSCALE and Perception Point Advanced Email Security, they are very similar. However, IRONSCALE is less expensive..”

Alon Hodir

Chief Information Security Officer at a computer software company with 51-200 employees

[Read full review](#) 

“My company's clients were using some other solutions like Mimecast, IRONSCALES, and Proofpoint in the past, but my company later managed to replace them all with Perception Point Advanced Email Security..”

Jijin Joseph

Technical Director at Channelnext

[Read full review](#) 

“I recommend that Perception Point Advanced Email Security is the best option in the market at the moment; however, we can say that Check Point and Proofpoint are competitors in the UAE market. They are also in competition with this, but feature-wise and detection rate-wise, Perception Point Advanced Email Security is ahead of these solutions..”

GOUTHAMKRISHNA

Senior Security Analyst at a security firm with 11-50 employees

[Read full review](#) 

“The main competitors of Perception Point Advanced Email Security are Forcepoint and Check Point, as they compete effectively with Perception Point in the market, particularly regarding compliance capabilities. Forcepoint and Check Point both demonstrate strong technology. The competition between Check Point and Perception Point Advanced Email Security is highly competitive, with inch-by-inch competition occurring..”

GOUTHAMKRISHNA

Senior Security Analyst at a security firm with 11-50 employees

[Read full review](#) 

“We have used Mimecast before. Their user interface was complex and complicated to navigate. During the POC, it was evident that Perception Point could detect and prevent certain malicious emails that Mimecast had missed.

We switched to Perception Point as it has better reviews than other competitors in email security scenarios..”

GOUTHAM KRISHNA P S

Senior Information Security Analyst at channelnext

[Read full review](#) 

“We tried to use IronPort and Microsoft. We selected Perception Point because we liked their engine for detecting malicious emails. We also liked the GUI and the easy setup. Besides the effective security, which was a major part of our decision, we also thought that the total cost of ownership of the product would be better for us, as we are a very small team. Another factor was that it included SharePoint protection and that was an extra feature not available in other solutions that were just anti-spam systems.

It's hard to compare the detection rate among these solutions because all of them are doing a good job.

The best part of Perception Point was that the system is already configured for best practices. It does the job as well as it can be done. When we tried other solutions, they had to be configured down to the smallest details. And if there are any changes in the environment, we would always have to be ready to change the system configuration. Again, because we're a small team, we felt that it would be better for us to go with a system that is configured optimally..”

ROI

Real user quotes about their ROI:

“The pricing compared to the value Perception Point brings is super-competitive. They're not the cheapest in the market, but the value and the quality of the product are superior to anything else in the market, so we don't mind paying more for it. The value for money makes total sense for us..”

Verified user

Principal at a financial services firm with 11-50 employees

[Read full review](#) 

“I am confident that there is a good return on investment with Perception Point Advanced Email Security. For example, in time saved, I am certain that it saves us a lot of time.

“I estimate that my team saves approximately eight hours each week because of Perception Point Advanced Email Security..”

Verified user

Security analyst at a outsourcing company with 501-1,000 employees

[Read full review](#) 

“We cannot measure it financially, but there has been return on the investment. My employees don't need to deal with alerts or phishing messages coming into their inboxes. This is where the return on investment comes in. My SOC team doesn't need to address every phishing or spam email. This saves us time so employees can continue with their work.

Perception Point Email Security has helped save about four hours a week for our SOC, which is nice..”

Mr. Sivan

Chief Information Officer at a legal firm with 201-500 employees

[Read full review](#) 

“I believe we have seen ROI. We are catching emails, important emails to our VIPs. We run reports facilitated by Perception Point on the numbers, but they also provide summaries that we highlight at the end of every month about emails attacking VIPs or impersonating VIPs. We can see that if an email had not been caught it could have been really malicious. From that point of view, the return on investment is there. Even one email that gets through is already one too many, but there is no 100 percent solution. When we see that, on top of Microsoft, Perception Point is catching 25,000 to 30,000 emails, that is a good number for us. As a percentage of the volume of email that we receive overall, those numbers are small, but they're quite big if we understand that there are 30,000 emails with potentially malicious implications for our users and our company..”

Verified user

Director of Office 365 Services at a manufacturing company with 10,001+ employees

[Read full review](#) 

“The detection rate is very high with this product. None of our customers have complained about any major issues.

Whoever onboards with us is extremely happy. We have started getting the renewals for the solution.

The solution has helped to reduce the number of alerts received by our endpoint layer. Per mailbox each week, there are fewer than 10 alerts. So, in a month, there are fewer than 50.

It prevents about 100 threats of malicious content per mailbox a month..”

Jijin Joseph

Technical Director at Channelnext

[Read full review](#) 

“People don't realize the benefit of it. When we get a new customer, we include this solution in our pricing. They don't even realize that we put it in. The first thing that our customers don't realize is they are not getting a lot of viruses or bad emails. The second is that they are staying up all the time. For example, with this other previous customer who didn't have it, they had somebody clicking a bad email almost every day. They were at risk of getting an infection, and then they had problems. We would then have to go clean it up. Their employees couldn't work because we were working on the computer where they clicked the bad email.

For people who don't have it, they will see the benefit when they do have it. It won't interrupt your business because everything runs smoothly. You never see the bad stuff.

It prevents downtime. A lot of our customers don't like it when their employees are not working because they are paying them to do nothing. If I have to work on somebody's computer for two hours, that is two hours when somebody is getting paid to do nothing. That is the thing that this type of solution helps with. It is really a waste of my time. Because if they had this solution, I wouldn't have to spend two hours cleaning it up..”

Neal Granick

Operations and Information Security at a tech services company with 1-10 employees

Use Case

“We're using Perception Point Advanced Email Security for several purposes. In one customer, we use it for disclaimers, VIP users, SharePoint, Teams, and OneDrive personnel..”

Fabio Amorim Araujo

Founder at Envisionare Solucoes em Tecnologia

[Read full review](#) 

“There are multiple use cases. There are those who are facing big-time, sophisticated attacks through emails. Those who are looking for not only email security but also security for other cloud collaboration channels. Both scenarios. We sold the Perception Point..”

Belgin Abraham

Chief Executive Officer at Channel Next

[Read full review](#) 

“We use the product to safeguard your organization's email communication from various threats, particularly targeting senior-level employees. The aim is to prevent phishing attempts, spam, and other malicious attacks that often target executives or individuals accessing sensitive information..”

GOUTHAM KRISHNA P S

Senior Information Security Analyst at channelnext

[Read full review](#) 

“In the dealership group, we were running about 60,000 emails a month and we were finding that Perception Point Advanced Email Security was kicking back approximately 30 to 35% of those emails as either being spam, outright malicious, or POAs..”

GraftonCole

IT at a retailer with 11-50 employees

[Read full review](#) 

“My main use case for Perception Point Advanced Email Security is proactive defense against advanced threats, particularly phishing, zero-day attacks, and malware that a standard filter might miss. I rely on the deep analysis capabilities to protect our users.

“When we receive mail that contains a malicious attachment, the Perception Point Advanced Email Security analysis helps us significantly..”

Verified user

[Read full review](#) 

Security analyst at a outsourcing company with 501-1,000 employees

“Perception Point Advanced Email Security specializes in email security, though it includes different products like collaboration security and browser security. Customers are looking for these additional capabilities. I am not recommending the browser security of Perception Point Advanced Email Security because it is not sufficiently matured and is still in the development phase.

“The primary use cases are definitely centered on email security, such as protecting emails from malicious content and spam, along with compliance. Compliance is a significant use case, particularly in the GCC region and MENA region where regulatory requirements are substantial..”

GOUTHAMKRISHNA

Senior Security Analyst at a security firm with 11-50 employees

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“The deployment process is very easy. The documentation is helpful and clear for deployment and configuration. We don't need a lot of resources or people for maintenance. All our clients are in the public cloud..”

Fabio Amorim Araujo

Founder at Envisionare Solucoes em Tecnologia

[Read full review](#) 

“The initial setup is super easy because, from the last year's end, I didn't even miss any renewals. All the clients renewed. So, ten out of ten. I would rate it a ten on ten, where one being difficult and ten being easy. .”

Belgin Abraham

Chief Executive Officer at Channel Next

[Read full review](#) 

“The initial setup of Perception Point, whether deployed on-premises or in the cloud, was straightforward and efficient. The installation and configuration process took approximately an hour, including onboarding and DNS settings. Compared to other email security solutions, it was a quick setup process, requiring minimal time..”

GOUTHAM KRISHNA P S

Senior Information Security Analyst at channelnext

[Read full review](#) 

“The initial setup for Perception Point Advanced Email Security is very straightforward and also very transparent. There is nothing happening behind the scenes; everything is visible, and we set it up while having control over it. Even when the system scans emails and all, we maintain control over Office 365 or G Suite, whatever email security or service provider that we are using..”

GOUTHAMKRISHNA

Senior Security Analyst at a security firm with 11-50 employees

[Read full review](#) 

“The product's initial setup was straightforward and can be done in 30 to 45 minutes.

Currently, my company helps others to deploy the product and their environments.

The solution is deployed on the cloud and on an on-premises model. .”

Jijin Joseph

Technical Director at Channelnext

[Read full review](#) 

“The setup process for Perception Point Advanced Email Security is straightforward with no changes or improvements to the email security setup process. The setup complexity depends on the email platform being integrated. For Office 365, the integration takes approximately 15 minutes. For G Suite, the setup is more complex and requires approximately four to five hours due to G Suite's architecture rather than any limitation with Perception Point Advanced Email Security. Office 365 integration is fast and seamless by comparison..”

GOUTHAMKRISHNA

Senior Security Analyst at a security firm with 11-50 employees

[Read full review](#) 

Customer Service and Support

“The technical support from Perception Point has improved significantly following the Fortinet acquisition. I would rate the technical support at nine out of ten..”

GOUTHAMKRISHNA

Senior Security Analyst at a security firm with 11-50 employees

[Read full review](#) 

“I would rate their technical support as good, very good. Even though the acquisition happened, the support remains good until now, and I can rate it 4.5 out of five..”

GOUTHAMKRISHNA

Senior Security Analyst at a security firm with 11-50 employees

[Read full review](#) 

“The customer support for Perception Point Advanced Email Security is very good. They help us a lot, and when we create a ticket, they answer us in one or two hours..”

Verified user

Security analyst at a outsourcing company with 501-1,000 employees

[Read full review](#) 

“I did not use the support from Perception Point Advanced Email Security. However, we did use the support from the dealer we purchased the solution from..”

Alon Hodir

Chief Information Security Officer at a computer software company with 51-200 employees

[Read full review](#) 

“They provide good support. If we have a problem, we create a ticket in the Perception Point system. And if there is something that we don't think can be handled through the portal, we can call or email or WhatsApp our customer success manager and everything works. He replies very quickly..”

Verified user

IT Infrastructure Manager at a manufacturing company with 10,001+ employees

[Read full review](#) 

“Because Perception Point is not such a big company right now, I found that they are very responsive. The account team, the team that we did the PoC with, was very friendly. They answered all of our queries and they were always there. Even if we didn't directly communicate with the IR team, the person that we were in touch with, who had connections with the IR team, was always available. He was always giving us a heads up telling us, "We caught this campaign," or asking us if we needed anything. They were very friendly, responsive, and professional.

We didn't communicate with the support team. The account team took care of anything we needed. But they were excellent..”

Verified user

Senior Security Engineer at a computer software company with 1,001-5,000 employees

[Read full review](#) 

Other Advice

“Some features related to the user interface need improvement. While the pricing for email security alone remains reasonable, their additional offerings for collaboration apps like Teams, Zoom, and other web security vendors might entail a slightly higher cost.

I rate Perception Point Advanced Email Security an eight out of ten..”

GOUTHAM KRISHNA P S

Senior Information Security Analyst at channelnext

[Read full review](#) 

“Perception Point Advanced Email Security is extremely user-friendly, and I would focus on the advanced threat capabilities because they are so advanced. It is not just a simple spam or malware filter; it deals with real-time sandboxing and anti-malware technology against current targeted threats, which is the difference between Perception Point Advanced Email Security and Defender. I rate Perception Point Advanced Email Security an eight on a scale of one to ten because it is very easy to use, and I prefer it. Compared to Defender, it is completely different. Perception Point Advanced Email Security offers just a few menus with a very simple interface, and that helps a lot. The customer support team is also very good, resolving our problems in just a few hours..”

Verified user

Security analyst at a outsourcing company with 501-1,000 employees

[Read full review](#) 

“The solution is very easy to use. We don't have any difficulty with transactions. Finding information, customizing configurations, and getting support or documentation is simple. I don't have any negative points to mention. I would recommend this solution to others. On a scale of one to ten, I'd give it a ten.

It's amazing for us—the protection, the analysis time compared to Microsoft 365, and the pricing are all good. We're using both solutions—spam and protection channels. Recently, we presented two-week results to a customer, and they liked them and wanted to buy the solution. Our feedback is positive.

We're developing a strategy to increase sales of the solution. When we deliver executive summaries to customers, we present good news about our company and discuss how Perception Point Advanced Email Security can help improve their security..”

Fabio Amorim Araujo

Founder at Envisionare Solucoes em Tecnologia

[Read full review](#) 

“Perception Point Advanced Email Security specializes in email security, though it includes different products such as collaboration security and browser security. Customers are also seeking these additional capabilities. I am not recommending the browser security of Perception Point Advanced Email Security because it is not sufficiently matured and is still in development.

“The only area for improvement is the integration capabilities with other solutions.

“Perception Point Advanced Email Security is fully deployed on a cloud deployment model.

“Regarding pricing, the cost-benefit depends on the customer's specific situation. However, in terms of cost savings, the GCC region has experienced significant

financial fraud through email, with customers being targeted by ransom demands, scams, and money-related fraud. Customers can save substantial amounts through Perception Point Advanced Email Security. Additionally, the time the IT team invests in email filtration can be significantly reduced. If teams are manually managing email filtering or relying on default email filters from Office 365 or G Suite, they typically invest considerable time and effort in blocking unwanted emails or creating policies within the tenant. With Perception Point Advanced Email Security, the workload is reduced by approximately 60 to 80 percent.

“Additional benefits include the reporting capabilities, which are excellent. Customers can enjoy other benefits such as customer support from Perception Point, now under Fortinet. Fortinet provides a substantial support infrastructure, resulting in improved support and services. Being associated with a well-known vendor under Fortinet has also improved the trustworthiness of Perception Point Advanced Email Security. My overall review rating for Perception Point Advanced Email Security is 8.5 out of 10..”

GOUTHAMKRISHNA

Senior Security Analyst at a security firm with 11-50 employees

[Read full review](#) 

“That is part of their service with Perception Point Advanced Email Security or what we pay for.

“I use the detailed reporting feature with Perception Point Advanced Email Security every week. That's what I use to inform people because with a lot of this reporting, you'll find they tailor certain people within a company, upper managers, finance people, etcetera. Therefore, you keep them informed as to where their attacks are coming from. You'll see the attacks hitting numerous people within the dealership, and so you make them aware that email from here is malicious. Half the time they never see it because [KnowBe4](#) filters it out or Perception Point Advanced Email Security does.

“It is essential that Perception Point Advanced Email Security integrates with our existing infrastructure for me because it's part of our cybersecurity requirements for our cybersecurity insurance coverage. There are certain companies that are highly recognized within insurance companies that you should use, so Perception Point Advanced Email Security is one.

“I think it's a good product as is, and I know they're continually improving their AI detection. I think as it is, Perception Point Advanced Email Security is a really good product. I'd recommend it to everybody.

“For what it does, I think pricing for Perception Point Advanced Email Security is fair. You pay on a per-user basis, so I think the pricing is fair for what you get. You log into the portal, and you can do filtering, you can see who got hit with what, where the threats are coming from.

“On a scale of 1–10, I rate this solution a 10..”

GraftonCole

IT at a retailer with 11-50 employees

[Read full review](#) 

“I assess the effectiveness of Deep Content Disarm and Reconstruction technology as 4.5 out of five. [FortiMail](#) is now investing in Perception Point Advanced Email Security, and it is now under [FortiMail](#) Workspace Security. Fortinet is investing significantly in research and development, which is why new features are coming up. In terms of technology, Perception Point Advanced Email Security or FortiMail Workspace Security is top-notch in the industry. However, we cannot say it is a pure Fortinet family product because, based on the architecture, it is still a standalone product. We do not know about the future, but perhaps they will integrate it with Fortinet data centers, and then we can say it is a pure Fortinet family product. After the acquisition, they introduced [FortiCloud](#) integration into FortiMail Workspace Security, which is also a good feature for customers or users having Fortinet or FortiGate firewall and [FortiCloud](#) in their environment. With

EDR, threat correlation can be seamlessly done from FortiCloud with ease.

“The extensive reporting capabilities influence my decision-making process regarding email security as the reporting feature is intermediate. I believe there have been no changes in that part for the last couple of years, and there are no updates. Intermediate reports come in weekly, quarterly, and monthly, and we can schedule them. Automation is also included, as we can schedule the reports based on our requirements, and they will arrive in the inbox. They have introduced a graphical report, which is the one change that we can see in the reporting structure. However, there are no other types of reports or additional reports that exist in FortiMail Workspace Security.

“In evaluating the success of sandboxing features in identifying threats in Fortinet, I find that they have two sandboxes in FortiMail Workspace Security. One is CPU, and the other is application, allowing for two levels of sandboxing. The metrics I use include application testing to see how effectively it detects or scans application-level malware or application-level executables. I also check for system-level executables such as EXE or MSI files, which can disrupt or modify system registry files or C-level programs. Perception Point Advanced Email Security shows very good results in that testing metric.

“My experience with the pricing of Perception Point Advanced Email Security indicates that it is not costly, but actually a very decent price. With the features, functionalities, and detection capabilities that FortiMail Workspace Security provides, it is worth the investment. The need for human intervention is minimal. We have customers who have replaced Mimecast or other technology-based solutions with Perception Point Advanced Email Security or FortiMail Workspace Security, reporting that their challenges have reduced by approximately 95%. They no longer need to come to Perception Point Advanced Email Security every time to create policies or to check for false negatives or false positives. In Perception Point Advanced Email Security, it is very easy to manage, and that is the real feedback from the customers. I would rate this product 8.5 out of 10..”

About PeerSpot

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
