Product Recap

1Password SaaS Manager

1Password SaaS Manager Recap

Trelica is a comprehensive SaaS management platform designed to streamline software oversight and enhance IT operational efficiency for businesses. It provides valuable insights into software usage, enabling informed decision-making and effective cost management.

Trelica's SaaS management capabilities focus on helping enterprises manage their software ecosystem, from tracking applications to optimizing spend. By centralizing software data, Trelica offers visibility into software utilization and enables administrators to efficiently manage licenses, compliance, and renewals. This platform empowers businesses to achieve strategic goals through proactive software management.

What features make Trelica stand out?

- **License Tracking:** Monitors license usage to prevent overspending.
- **Renewal Management:** Alerts to renewals to ensure continuous access.
- **Compliance Monitoring:** Ensures adherence to software policies.
- **Application Discovery:** Identifies unapproved software to reduce risks.

What benefits are key in reviews?

- **Cost Efficiency:** Streamline expenses by managing software licenses.
- **Operational Effectiveness:** Reduces manual effort in software management.
- **Enhanced Security:** Minimizes risks of unapproved applications.

Trelica is implemented across technology-driven industries to handle complex software portfolios. In sectors such as finance and healthcare, where compliance and security are crucial, Trelica provides the necessary tools to manage and optimize software assets effectively. Its adaptability makes it a valuable tool for strategic IT management in specialized industries.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

“I would advise others looking into using 1Password SaaS Manager to use it because it is easy and secure.”

Validated user

Sr Security Engineer at a tech vendor with 5,001-10,000 employees

“1Password SaaS Manager is reliable and affordable and saves a lot of cost to any enterprise.”

Bethanywalstad Wallister

Java Application Developer at Hexaview Technologies

“I find 1Password SaaS Manager highly valuable, enjoy the ease of it creating and storing passwords, and it allows me to log into my various work-related platforms seamlessly.”

Benjamin Bradley

Manager, Customer Success at a media company with 201-500 employees

“I have seen a return on investment with 1Password SaaS Manager primarily in security, as it greatly aids in shadow IT discoverability, although I do not have specific metrics.”

Khushi Gupta

Assistant Professor of Cybersecurity at a university with 1,001-5,000 employees

“1Password SaaS Manager has positively impacted my organization because we are able to audit end-user application usage, which we were not able to do previously because it's hard to track where credentials are being used.”

Ahtisham Mirza

Senior System Administrator at a computer software company with 11-50 employees

“1Password SaaS Manager has impacted my organization positively by reducing the information, having a centralized store of sensitive information, and also providing an easier way to collaborate between departments.”

Aperez Perez Rivera

Cybersecurity Director at SPsec LLC

“Overall, 1Password SaaS Manager is a stronger platform for SaaS visibility, access governance, and automation, with the biggest value being its ability to bring discovery, security, and spend automation into one place.”

Marcelo Siqueira

Especialista de Infraestrutura at a tech vendor with 10,001+ employees

What users had to say about valuable features:

“The best features 1Password SaaS Manager offers include the open and fill function, the integration, and the ability for it to recognize login areas within any website and save those credentials automatically. I also appreciate that it has the ability to create vaults, allowing us to create groups of passwords and manage access within our environment.

1Password SaaS Manager has positively impacted our organization by making it significantly more secure. Previously, we had passwords out in the open, leading to frequent mistakes and password resets. This has effectively eliminated those issues and sped up the process of users accessing the tools they need exponentially. Before, users had to manually copy and paste credentials, but now it is all open and fill..”

Brant Smith

IT Support Specialist Tier 1 at CONEXON, LLC

[Read full review](#)

“One of the best features I appreciate about 1Password SaaS Manager is its ability to address shadow IT, especially in today's environment, as we have different kinds of AI tools that may not have been approved by IT. Understanding that or looking at that across the organization and getting the associated telemetry is always a good idea.

“1Password SaaS Manager's telemetry feature is really helpful to me because real-time alerts are quite beneficial, especially when configuring notifications that send through Slack or Teams, particularly when an authorized user is using an unsanctioned AI tool or application.

“1Password SaaS Manager has positively impacted my environment by discovering shadow IT, which is significant in an academic or research setting, as often many different AI tools or applications are deployed that may not be permitted..”

Khushi Gupta

Assistant Professor of Cybersecurity at a university with 1,001-5,000 employees

[Read full review](#) 

“The best features 1Password SaaS Manager offers include credential sharing, which is really useful, and easy access because anytime I type a password on the browser, it asks me if I want to save it on 1Password. It is very handy, and I appreciate how secure and easy it is to use.

“In terms of security, I can create different vaults and give access to different people within the organization who I want to have access to the vault, so a vault becomes like a secure folder. When I save the password or credentials, it allows me to have it in a secure password format so that it appears as a dot rather than the actual password, preventing anyone from seeing it while minimizing shoulder surfing. 1Password SaaS Manager is very easy to use.

“1Password SaaS Manager has positively impacted my organization because many automations depend on 1Password for authentication. They authenticate to 1Password and get the respected passwords or credentials they need, such as tokens and APIs. It is really easy to access via the codebase, so my major use case becomes automation that uses 1Password to log in and get the respective credentials..”

Validated user

[Read full review](#) 

Sr Security Engineer at a tech vendor with 5,001-10,000 employees

“My favorite feature of 1Password SaaS Manager is that it automatically creates safe and secure passwords so I do not have to think about matching all the characters and fields that are required. I can then automatically save it to my 1Password account so that once the password has been created for me, I can quickly log into these different websites where I am required to enter these specific passwords.

The automatic password generation and autofill of 1Password SaaS Manager has definitely saved me time as it allows me to log into things with ease and also alleviates the headache of having to remember passwords and what password corresponds to what platform. Since everything is stored under 1Password dashboard and I have the extension installed, I do not have to worry about manually entering or trying to remember what is associated with what.

1Password SaaS Manager has positively impacted my organization in that, while I do not necessarily think that productivity varies between user to user just because we are using it to store login information, it has brought peace of mind to the larger IT department in knowing that we are using safe and secure passwords in valuable platforms that might have detailed information. Unfortunately, our IT department does not share particular information regarding reduced security incidents or less time spent on password resets since adopting 1Password SaaS Manager, but I know that as a company, we are all pleased with our general experience with using 1Password..”

Benjamin Bradley

Manager, Customer Success at a media company with 201-500 employees

[Read full review](#) 

“I use 1Password SaaS Manager to improve visibility, standardize access control, and reduce the risk of shared or unmanaged credentials across SaaS applications.

“The best features that 1Password SaaS Manager offers are SaaS discovery and visibility, access governance, automated provisioning and de-provisioning, license optimization, and workflow automation. I especially value the centralized visibility and policy-based access control.

“Automation in 1Password SaaS Manager helps reduce manual access management, while visibility gives me a clear view of SaaS usage, users, permissions, and potential security risks. My favorite part is being able to identify and address unmanaged access quickly.

“Another key benefit of 1Password SaaS Manager is the centralized audit trail and access governance, which helps with compliance and makes it easier to prove who has access to what and why.

“In my organization, 1Password SaaS Manager has improved security and visibility, reduced manual access management, and helped enforce least privilege access across SaaS applications..”

Marcelo Siqueira

Especialista de Infraestrutura at a tech vendor with 10,001+ employees

[Read full review](#) 

“I have both the mobile device and the desktop app for 1Password SaaS Manager, so I can use it if I'm logging into an app on my phone or if I'm logging into a website, which I appreciate for the flexibility.

“In my opinion, the best features 1Password SaaS Manager offers include the high level of security, as you have a secret key on the desktop and you have to make sure you know the password to log in. There are many checks and balances in place to ensure that you are the only one that can access it, and you can also pick and choose which passwords other people can see that are on your team versus ones that are just for you.

“I find the process of setting up team permissions and sharing passwords securely with 1Password SaaS Manager very straightforward. You just add people to the team if they have access, and you can pick and choose which passwords go into the shared vault and which stay private. This is a setting you can configure as soon as you add any new password into your vault.

“1Password SaaS Manager has positively impacted my organization by keeping passwords safe. In the few events where someone has been able to figure out the password and try to hack it, I already had two-factor authentication enabled, so it has protected me. I can go back into 1Password SaaS Manager, change it, update it, and choose a stronger password. I can even see the complexity of the password that was cracked to use a higher complexity for the next version. This experience has significantly impacted my sense of security and my team's workflow, resulting in a big change in peace of mind. I can just change my password and keep going, and I do not have to worry about it..”

Other Solutions Considered

“I was previously using Google at my old job, but coming to Nosto, they were using 1Password SaaS Manager, so that is where I now store passwords for work-related items..”

Benjamin Bradley

Manager, Customer Success at a media company with 201-500 employees

[Read full review](#) 

“I did not evaluate other options before choosing 1Password SaaS Manager; we used this because we were already using 1Password for password management, so we decided to go with the product..”

Ahtisham Mirza

Senior System Administrator at a computer software company with 11-50 employees

[Read full review](#) 

“I previously used Keeper, an internally deployed password manager, and we switched because one of the advantages is that we do not have to manage it anymore since 1Password SaaS Manager is a SaaS solution. This means we did not have to take care of security patching or managing the instance..”

Francisco Pulido

SecOps Engineer at a real estate/law firm with 501-1,000 employees

[Read full review](#) 

“In terms of security with 1Password SaaS Manager, I can create different vaults and give access to different people within the organization who I want to have access to the vault, so a vault becomes a secure folder. ROI

Real user quotes about their ROI:

“I have seen a return on investment with 1Password SaaS Manager primarily in security, as it greatly aids in shadow IT discoverability, although I do not have specific metrics..”

Khushi Gupta

Assistant Professor of Cybersecurity at a university with 1,001-5,000 employees

[Read full review](#) 

“I have not seen a return on investment in the traditional sense. The ROI in 1Password SaaS Manager is basically improving internal security, thereby reducing the attack surface..”

Francisco Pulido

SecOps Engineer at a real estate/law firm with 501-1,000 employees

[Read full review](#) 

“I cannot comment on how much was invested in 1Password SaaS Manager, but I can see how it is useful because it saves a lot of time when doing automations. It has saved us time in updating passwords and accessing them easily and efficiently, but when it comes to fewer employees, that is not a metric I can use to evaluate if it was a good investment..”

Validated user

Sr Security Engineer at a tech vendor with 5,001-10,000 employees

“Two main measurable impacts since using 1Password SaaS Manager are time savings and license optimization. Automation can save several hours per month by reducing manual onboarding and offboarding tasks, while unused licenses can be identified and reclaimed. 1Password reporting indicates customer savings of up to three hours per offboarded employee..”

Marcelo Siqueira

[Read full review](#) 

Especialista de Infraestrutura at a tech vendor with 10,001+ employees

Use Case

“My main use case for 1Password SaaS Manager is a centralized password manager for our whole company. I work in IT, and we have many logins across our company, including internal sites and external access. It creates ease of use instead of everyone having to manually input the passwords, and we also use it as an MFA, such as a one-time password on some websites..”

Brant Smith

IT Support Specialist Tier 1 at CONEXON, LLC

[Read full review](#) 

“My main use case for 1Password SaaS Manager is managing and setting my complex passwords, which I rely on it for the most.

“A quick specific example of how I use it to manage my complex passwords in my day-to-day work is that I will either let Google suggest a password or if it has been hacked, I will go back into 1Password SaaS Manager, change it, and use the recommendation they have there to ensure that I am setting a strong password. The added verification to get into 1Password SaaS Manager makes me feel completely safe to be able to use it. My company does not have a business relationship with this vendor other than being a customer, as I am not a partner or reseller..”

Validated user

Founder and CEO

[Read full review](#) 

“I primarily use 1Password SaaS Manager for creating super secure and long-winded unique passwords for various work-related platforms.

I utilize 1Password SaaS Manager daily to log into my company's Trinet account, which houses all of my benefits, PTO, and pay information. I use 1Password to autofill my password to the Trinet platform with ease so that I am able to access and utilize all of those company tools that are available to me.

The general use case for 1Password SaaS Manager is primarily password-related, but it does store passwords for a number of different things such as my general Nosto login and my Gmail, allowing me to quickly log into many high-level touch areas due to my use with 1Password..”

Benjamin Bradley

Manager, Customer Success at a media company with 201-500 employees

[Read full review](#) 

“I have hands-on experience with 1Password SaaS Manager, primarily focused on managing SaaS access, permissions, security policies, and Vaults, which is key to my work.

“My main use case for 1Password SaaS Manager is managing and securing SaaS access, including user permissions, access policies, and credential management.

“For example, I use 1Password SaaS Manager to control access to shared credentials, enforce least privilege permissions, and securely provision or revoke user access when people join or leave the team..”

Marcelo Siqueira

Especialista de Infraestrutura at a tech vendor with 10,001+ employees

[Read full review](#) 

“1Password SaaS Manager's main use case for me is to research shadow IT discovery and access governance across my lab and departments because we have various research labs and faculty bringing different cloud tools, so SaaS management actually gives us visibility into applications that IT may not be aware about.

“A specific example of when I used 1Password SaaS Manager to discover shadow IT or manage access governance in my lab involves a group of students setting up a cloud-based malware analysis sandbox. Rather than using our central vault, the students under my supervision created a free-tier log management platform and hard-coded an unmonitored API key into the script. I was able to flag this because I was using 1Password SaaS Manager's secret automation and SaaS manager capabilities, catching the unapproved SaaS service before the research could proceed and any telemetry was logged..”

Khushi Gupta

Assistant Professor of Cybersecurity at a university with 1,001-5,000 employees

[Read full review](#) 

“My main use case for 1Password SaaS Manager is organizing all passwords in different vaults and, most importantly, sharing credentials with my teammates.

“A specific example of how I use 1Password SaaS Manager to share credentials with my teammates is that I created a service account recently and needed to share it with the entire team. Rather than sending it through other means such as Slack, messages, or email, I go to the team's vault that we already have and create that credential. I share just the name of the credential with the entire team in a channel so that they can access it.

“1Password SaaS Manager is mainly used for sharing credentials with the team and updating them from time to time. The only thing I think is missing is knowing who created the credentials..”

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“The initial setup of 1Password SaaS Manager is a bit complex when it comes to setting up because I have to identify the main tools and configure them with the existing infrastructure efficiently..”

Bethanywalstad Wallister

Java Application Developer at Hexaview Technologies

[Read full review](#) 

Customer Service and Support

“The support has been efficient because when I call them, they usually respond very fast and are reliable. I positively support the customer support team because they have been good to us and helpful when we need them..”

Bethanywalstad Wallister

Java Application Developer at Hexaview Technologies

[Read full review](#) 

“The customer support is really good and effective in case of troubleshooting or any kind of issue.

“I would rate the customer support of 1Password SaaS Manager a ten because they are really good..”

Ahtisham Mirza

Senior System Administrator at a computer software company with 11-50 employees

[Read full review](#) 

Other Advice

“My advice to others looking into using 1Password SaaS Manager is that it works very well. I have not run into too many issues, although there can be some quirks with using the desktop app and browser extension, such as unlocking the extension with the desktop app when sometimes you are locked out of it, which can be annoying. Otherwise, it is a good product. I would rate this product a ten..”

Brant Smith

IT Support Specialist Tier 1 at CONEXON, LLC

[Read full review](#) 

“I did not purchase 1Password SaaS Manager through the [Google Cloud Marketplace](#); I purchased it directly from 1Password itself.

“My advice to others looking into using 1Password SaaS Manager is to get it, as it is very well worth the low dollar investment to keep it. I would rate this product a ten out of ten..”

Validated user

Founder and CEO

[Read full review](#) 

“I would advise others looking into using 1Password SaaS Manager that it would be very easy to implement; they do not have to think about it much, setup is easy, and they can integrate it directly into their extensions on their browser. I would recommend it to any user.

I do not have any additional thoughts about 1Password SaaS Manager; I find it highly valuable, enjoy the ease of it creating and storing passwords, and it allows me to log into my various work-related platforms seamlessly. I gave this review a rating of nine out of ten..”

Benjamin Bradley

Manager, Customer Success at a media company with 201-500 employees

[Read full review](#) 

“My advice for others looking into using 1Password SaaS Manager is to start with clear use cases, especially regarding SaaS discovery, access governance, and onboarding and offboarding automation. Then integrate with existing identity, HR, and finance systems to maximize visibility and automation.

“Overall, 1Password SaaS Manager is a stronger platform for SaaS visibility, access governance, and automation, with the biggest value being its ability to bring discovery, security, and spend automation into one place. I would continue investing in integrations and workflow flexibility while recommending it for organizations managing complex SaaS environments.

“I would rate this product an 8.5 out of 10..”

Marcelo Siqueira

Especialista de Infraestrutura at a tech vendor with 10,001+ employees

[Read full review](#) 

“I would advise others looking into using 1Password SaaS Manager to use it because it is easy and secure. It has secure parameters where I can create a vault and share it with the team I want, and I also have an individual vault where I save my own passwords and can share them with different teams. I find the access control really nice, so if someone wants a one-stop place to save all their credentials, I recommend choosing 1Password.

“I have not used 1Password SaaS Manager's governance or AI capabilities yet, but I think it would be nice to see those capabilities and if they can be used in automations.

“I have not used the AI capabilities of 1Password SaaS Manager yet, so I am unable to comment on the accuracy and reliability of the output. If there is an MCP for 1Password, that would be very intriguing to explore and use.

“I would rate this product an eight out of ten..”

Validated user

Sr Security Engineer at a tech vendor with 5,001-10,000 employees

[Read full review](#) 

“Although I do not have the metrics specifically, I did notice measurable results in my research lab and home lab due to the examples I have provided, leading to improved real-time visibility.

“I advise others looking into using 1Password SaaS Manager to consider that if you already use 1Password for password management or your secrets, adopting 1Password SaaS Manager is quite seamless.

“Regarding 1Password SaaS Manager's AI capabilities, I think it does a really good job at shadow AI discovery, identifying unapproved AI tools, especially now with many standalone AI tools and browser extensions, thus providing instant visibility which is really important. Adding visibility into data loss prevention would also be an advantage.

“I find the accuracy and reliability of 1Password SaaS Manager's output quite high, although I do not have a metric to quantify that.

“I rated 1Password SaaS Manager an eight out of ten based on the reasons I have provided throughout this review.

“I have no additional thoughts about 1Password SaaS Manager..”

Khushi Gupta

Assistant Professor of Cybersecurity at a university with 1,001-5,000 employees
