Product Recap

Securiti

Securiti Recap

Securiti provides advanced solutions for automating data privacy tasks with ease, supporting organizations in achieving compliance with global regulations while enhancing operational resilience and data protection.

Securiti enhances data privacy management through its powerful automation tools. Its drag-and-drop functionality simplifies tasks, enabling efficient personal information classification and sensitive data intelligence. With features like consent management, zero trust architecture, and data lineage visualization, Securiti supports compliance with international regulations, improving data protection and ensuring business continuity. While it needs refinement in areas like technical support and data classification accuracy, its robust AI data governance package remains a major asset for businesses.

What are Securiti's Key Features?

- **Drag-and-Drop Functionality:** Simplifies automation of privacy tasks.
- **Automated Classification:** Enhances personal data management.
- **Consent Management:** Facilitates GDPR compliance.
- **Zero Trust Architecture:** Strengthens data security.
- **Data Lineage Visualization:** Offers insights into data flows.
- **AI Data Governance:** Comprehensive tools for data governance.

What Benefits Can Users Expect?

- **Regulatory Compliance:** Streamlines adherence to global privacy laws.
- **Operational Resilience:** Automates tasks for consistent performance.
- **Data Protection:** Employs advanced techniques for safeguarding information.
- **Business Continuity:** Ensures uninterrupted operations through intelligent data handling.

In banking, Securiti aids in customer-facing applications for data protection, integrating with systems like Salesforce to manage consent. It ensures compliance with GDPR and the Australian Privacy Act, supporting industries in maintaining privacy standards. Securiti's learning packages also enhance skills in data governance and AI, proving valuable across sectors.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

- ✓ “With that kind of high availability and the continuous threat exposure management, CTEM, we are quite sure and we have proved our worth to the business in implementing the cyber security solutions.”

Verified user

Chief Manager (Information Technology) at a financial services firm with 10,001+ employees

- ✓ “The best features Securiti offers include that the data discovery was really good, it was easy to set up, and the view was a differential compared with other solutions, so we could see in a map where our data were located and investigate better who was using that data, who was responsible for that data and secure who had access to it.”

Tacio Veiga

Sr Investigation Specialist at Ifood

- ✓ “The automated way of identifying and classifying personal information is very beneficial.”

AzhagarasanAnnadorai

Founder at Kaizentric Technologies Private Limited

“The process mapping is a good tool. We have a nice view of their data.”

Franck Edery

Data Scientist, Protection of Personal Information, Information Security at Eviden France

“Their data discovery is a fantastic product.”

Abhijit MAJUMDAR

Senior Manager at KPMG

“The drag-and-drop features make Securiti easy to use, even for individuals who are not tech-savvy.”

Atul-Gupta

Manager at Cognizant

“Overall, I would rate Securiti a nine out of ten.”

Calvin Farmer

Integration Lean Non Financial Risk Transformation at a financial services firm with 10,001+ employees

What users had to say about valuable features:

Depending on the point of view, if I am in a commercial role, I always emphasize compliance with the law, for example, in Panama 81. In Chile, we have a new law regarding data protection. From a technical standpoint, the Discovery process is very detailed. For example, you have details like the color of the eyes, religious data, and credit card information.

The consent management framework is notable for its ability to manage consent across multiple platforms, which is significant for privacy and open banking. The data lineage visualization is powerful for tracking data paths and interactions. The tool offers third-party risk management, business continuity compliance, and aligns with local regulations, which is beneficial for operational resilience.

Maintaining the privacy of customers and ensuring compliance with international regulations are critical features of Securiti. Nowadays, we are in an international environment, so the rules are not the same in the United States as in Europe. It is important to have an agreement with the customer to process the data.

“The quality of the learning that Securiti offers, especially considering that the courses are free, is incredible.

“Securiti hasn't impacted my organization; it has impacted me as an individual.

“It has impacted me positively because the courses that I completed were in areas and subjects that I needed to be more confident in, and the courses and certification have provided me with that confidence and those skills.

“The overall availability of a free AI data governance and data security package is important enough in itself..”

Kieron Smith

[Read full review](#) 

Senior Cyber Security Consultant at a educational organization with 201-500 employees

“The best features Securiti offers in my experience primarily safeguard the digital assets. I would say the prime purpose of security is to safeguard the digital assets. That means the data, underlying platform, and be it the storage, compute, network, data, and applications. These major five pillars are what security solutions aim to protect. Security is in today's context, whether it is IS security or a subset of it, cyber security, it is very much required to reduce the business risk, business continuity risk which may arise because of the disruptions of compromised IT apps.

“Of those features, I find the zero trust network, zero trust architecture, ZTA, most valuable and unique in Securiti. If you look at the zero trust architecture, it's the three main principles under this, which include principle of least privileges and microsegmentation of the network and role-based access control, fine-grained access control. With these three tenets of zero trust architecture, we are quite confident that the mission critical customer facing applications which are hosted in their respective production region, remain up, alive, and uncompromised..”

“The best features Securiti offers include that the data discovery was really good, it was easy to set up, and the view was a differential compared with other solutions, so we could see in a map where our data were located and investigate better who was using that data, who was responsible for that data and secure who had access to it.

“The visualization helped my team because it was easy to understand the data, mainly the types of data that we had, and investigate and try to secure who had access to it.

“I would like to add that the integrations were really flexible with cloud and SaaS platforms, the dashboards were useful, and we had good visibility into sensitive and regulated data.

“Securiti has impacted my organization positively because during the time that I was using it, it had a positive impact on the organization, but we did not stay with that for a long time because we did not have the budget to keep it in the company.

“I noticed measurable outcomes with Securiti, mainly reduced risk and improved compliance; it did not reduce the risk firstly, but we could get some information to do that after..”

Tacio Veiga

Sr Investigation Specialist at Ifood

[Read full review](#) 

Other Solutions Considered

“It's a good product. Everyone should at least try Securiti once before making a conscious decision as every organization, environment, and program comes with different objectives. A particular tool choice depends on a small POC, but I definitely recommend Securiti..”

Abhijit MAJUMDAR

Senior Manager at KPMG

[Read full review](#) 

“We have been using Splunk for SIEM, and Imperva which is now acquired by Thales for DAM, as well as Qubro solutions for network security from inception. We have relied upon these solutions for almost a decade and do not foresee a need for an immediate shift as long as the assets are well protected and the uptime is maintained..”

Verified user

ROI

Real user quotes about their ROI:

“I have seen a return on investment, as I believe we saved time; we could save a lot of time searching for important data and critical data on our network..”

Tacio Veiga

Sr Investigation Specialist at Ifood

[Read full review](#) 

“I have seen a return on investment with Securiti. With more automation in the SOC and the implementation of the next generation SOC, the headcount required for around-the-clock monitoring of ever increasing IT assets has gone down drastically. There is also a tangible benefit in terms of the money with the reduced year-on-year application downtime, even though the cyber security threats are ever evolving..”

Use Case

I have experience in the module of cookies. It provides us with tools and control of compliance for providers. I work with the product primarily in the banking sector or central banking.

Verified user[Read full review](#) 

Services and Comercial Manager at a tech vendor with 11-50 employees

I manage Securiti for other people. Security is quite important today. My customers use it for data privacy and compliance. Nowadays, it is imperative to be compliant with the regulations. It depends on the country and the kind of data.

Verified user[Read full review](#) 

Works

We have been evaluating Securiti in the context of Australian regulations such as the Australian Privacy Act and GDPR. The goal is to understand its potential for GDPR use cases, user rights, data lineage, and open banking, which relates to Australia's consumer data right. Our work involves evaluating Securiti's benefits for regulatory compliance related to privacy and open banking.

Calvin Farmer[Read full review](#)

“My main use case for Securiti is their learning packages for training.

“I have used Securiti's learning packages to upskill myself on data governance relating to AI..”

Kieron Smith

[Read full review](#) 

Senior Cyber Security Consultant at a educational organization with 201-500 employees

“My main use case for Securiti is that we implemented it to improve our data privacy and compliance operations across multiple business units.

“A specific example of how I used Securiti for privacy or compliance in one of my business units is that the platform helped to centralize data discovery, classification, and governance processes that we previously handled manually, so we used it to find information on our company..”

Tacio Veiga

[Read full review](#) 

Sr Investigation Specialist at Ifood

“The main use case for Securiti in my organization is to safeguard the physical assets as well as the digital assets. The prime motive behind deploying the SOC or the security, cyber security solutions, or for that matter, the information security solutions within the bank is to safeguard the physical assets as well as the digital assets. Coming back to the digital assets, the focus is primarily on safeguarding the customer data, which is paramount to the day-to-day operations within the banking sector.

“A specific example of how I use Securiti to safeguard customer data involves our crown jewel applications or the applications which are customer facing such as core banking, INB, internet banking, mobile banking, loan lifecycle management system, or tab banking. For all these customer facing applications, we have implemented ZTNA 1.0 and ZTNA 2.0 implementation is in progress. That means the zero trust network architecture is implemented for all the mission critical customer facing applications, wherein we have adequate safeguards in place for protecting people, processes, and related technologies..”

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

The initial setup is easy. However, during the first part when I need to configure all the points for the scan, it can be somewhat complex. After that, the use is very simple and faster.

Verified user[Read full review](#) 

Services and Comercial Manager at a tech vendor with 11-50 employees

The initial setup was quite difficult. I work with data and am aware of all the policies. I have implemented many policies, like allowing people access to data and having some users with privilege, but it is more difficult.

Verified user[Read full review](#) 

Works

The initial setup was rated seven out of ten. The documentation needs to be more detailed, and the evolving product leads to a learning curve. Once familiar, it becomes easier, but improving documentation would help.

Atul-Gupta

Manager at Cognizant

“They have a very strong product support team. Even though we face some challenges, they are always there to help us. The training modules on their website are really user-friendly and helpful..”

Abhijit MAJUMDAR

Senior Manager at KPMG

[Read full review](#) 

“The initial setup faced challenges, and it was not straightforward. Many proof of concepts were conducted to ensure reliable output. I encountered several issues requiring technical support..”

AzhagarasanAnnadorai

Founder at Kaizentric Technologies Private Limited

[Read full review](#) 

“Before choosing Securiti, we evaluated other options, but now we are using Securiti for data privacy. It is one of the important components of the SOC, apart from other components I have mentioned, whether it is SIEM or DAM. Securiti solutions are now largely responsible for safeguarding the data privacy within the bank.

“In my experience, Securiti is quite robust, reliable, and scalable as far as data privacy is concerned, and it caters to most of the use cases across different business verticals..”

Customer Service and Support

The customer service and support from Securiti have been noted for their helpfulness and responsiveness. The team in Asia-Pacific has been particularly supportive and generous with partners, providing comprehensive assistance and material.

Calvin Farmer

Integration Lean Non Financial Risk Transformation at a financial services firm with 10,001+ employees

[Read full review](#) 

“Technical support can be a hit or miss. Some technical staff are great, but others are not very effective. On average, I would rate the technical support 4/10..”

AzhagarasanAnnadorai

Founder at Kaizentric Technologies Private Limited

[Read full review](#) 

The technical support from Securiti involves a local 'level one' support which is quite basic. I need to ensure that the infrastructure and communication network are in place. If not, I can escalate issues to Securiti.

Verified user

Services and Comercial Manager at a tech vendor with 11-50 employees

[Read full review](#) 

“Customer support for Securiti is quite reasonable, and if I have to rate them, I would say nine out of 10. They are prompt and they take care of most of the use cases or they provide prompt solutions..”

Verified user

Other Advice

The software requires an understanding of the regulatory environment and is not a silver bullet solution. It's essential to know about local privacy laws and organizational security policies while using the software. Overall, I would rate Securiti a nine out of ten.

Calvin Farmer

Integration Lean Non Financial Risk Transformation at a financial services firm with 10,001+ employees

[Read full review](#) 

My overall rating for Securiti is eight. Automating more support systems such as calls with the product team would enhance customer satisfaction. The support should be tailored to various client requirements.

Atul-Gupta

Manager at Cognizant

[Read full review](#) 

“Securiti deserves a rating of ten on a scale of one to ten. I chose this rating because it did absolutely everything that I needed it to. My overall review rating is ten..”

Kieron Smith

Senior Cyber Security Consultant at a educational organization with 201-500 employees

[Read full review](#) 

I would recommend Securiti because it provides many details regarding the information after scanning. The solutions are modular, so if a customer's budget is low, we can start with just one module. However, the initial configuration is not very easy for the customer and requires help from the provider. I rate the overall solution a seven out of ten.

Verified user

Services and Comercial Manager at a tech vendor with 11-50 employees

[Read full review](#) 

“My advice to others looking into using Securiti would be that if you want to use it for a big company or small or medium company, you can use it, but for a multinational, I believe it is a bit slow; I do not know if they improved it, but the time that I tested, it was a little slow. I would rate this review seven out of ten..”

Tacio Veiga

Sr Investigation Specialist at Ifood

[Read full review](#) 

“More and more automation, whether reduction of the exposure or automated remediation of the vulnerabilities, and the prompt reporting in the [GRC](#) tool, those are the key initiatives we have taken for last few years in safeguarding the bank's digital assets.

“My advice for others looking into using Securiti is to first compile your use cases for a particular sector where you are operating. Thereafter, perform the POC of those use cases followed by pilot implementation before a full-blown rollout. It makes sense to examine or assess the efficacy of security solutions prior to a full-blown rollout.

“I rate Securiti eight out of ten..”

About PeerSpot

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
