Product Recap

GoAnywhere MFT

GoAnywhere MFT Recap

GoAnywhere MFT offers an intuitive interface with advanced workflows, robust security, and seamless integration across platforms. It automates file transfers, supports multiple protocols, and ensures strong encryption and centralized management for secure and efficient data exchange.

GoAnywhere MFT provides automation for secure file transfers using SFTP, FTPS, and HTTPS protocols. It supports comprehensive logging, auditing, and threat protection. The platform's encryption and scalability enhance data exchange and operational efficiency in sectors like finance and healthcare. Users appreciate its integration capabilities with AWS, Azure, and Salesforce, reducing manual tasks and maintaining security with robust encryption through connectors.

What are GoAnywhere MFT's most important features?

- **Intuitive Interface:** Easy navigation, facilitating better user experience
- **Advanced Workflows:** Streamlines processes to save time
- **Robust Security:** Strong encryption and threat protection
- **Seamless Integration:** Connects with platforms like AWS, Azure, and Salesforce
- **Automation Capabilities:** Reduces manual tasks, improving efficiency
- **Multiple Protocol Support:** Utilizes SFTP, HTTPS, and FTPS for secure transfers

What benefits should users expect in reviews?

- **Enhanced Efficiency:** Automation reduces manual processes
- **Data Security:** Features strong encryption and comprehensive threat protection
- **Scalability:** Supports large data volumes efficiently
- **Compliance Support:** Meets industry-specific data regulations

GoAnywhere MFT is widely implemented in industries like finance and healthcare for secure data transfers and workflow management. It simplifies internal processes and enhances communication between systems, integrating seamlessly with platforms such as AWS and Salesforce, thus ensuring speed and security.

Valuable Features

Excerpts from real customer reviews on PeerSpot:

- ✓ “The best features in GoAnywhere MFT are that it's fast, reliable, and secure; it has resolved one of our security points with compliance and acts as a centralized file sharing system that improves efficiency by about 80 to 90% and saves 90 to 95% of time.”

Anuj Bhagwat

Dev Ops Engineer at a computer software company with 11-50 employees

- ✓ “GoAnywhere MFT has saved us approximately 30% of the time in securely connecting with third parties, as it previously took about 50 minutes to transfer files manually, but now it takes about 35 minutes.”

Ramanuj Ghosh

Software Engineering Manager at State Street

- ✓ “I have seen a lot of return on investment because the built-in automations make the workflow fast and reduce our time significantly, allowing us to focus on other administrative roles rather than routine tasks.”

Jane Rachma Kiniti

IT Project Manager at Labo des histoires

- ✓ “After implementing GoAnywhere MFT, we saw clear improvements in efficiency and reliability, with time saved around a 60 to 70 percent reduction in manual file transfer.”

Tassavour Shaikh

Network Security Engineer at Digitaltrack

- ✓ “The main benefits I have seen from using GoAnywhere MFT are that it removes all manual efforts through automation and reduces manual file transfer because we have scheduled our jobs.”

Nishith Joshi

Dev Ops Engineer at Data Elicit Solutions Pvt. Ltd.

- ✓ “GoAnywhere MFT saves at least 60% of my time per week or per month.”

Derrick Aiine

Information Technology Manager at Benchmac Safety Services Ugand

- ✓ “The automation capabilities have helped reduce the number of manual file transfer tasks our team had to perform, improved consistency, and allowed the team to focus more on exception handling and process improvement rather than routine file moving activities.”

Dilip Chauhan

Tester at Pantomath Group

What users had to say about valuable features:

“The best feature of GoAnywhere is that transfers are straightforward if there are no other requirements from the source and destination. It doesn't require much maintenance..”

LEEJET AGGASSI HERMOSA HUGO

Consultant at Bridgeway Communication System, Inc.

[Read full review](#) 

“The main important features I appreciate about GoAnywhere MFT are its security, monitoring, and automation capabilities. Once a workflow is configured, it becomes very easy to automate file transferring.

“The overall speed of the support is very good, but it depends upon the size of the data. The service is reliable and performs well, making file transfers generally quick. If the data is regular and consistent, it works smoothly, and monitoring helps me identify any delays or issues. Overall, the speed is good but can depend on file size and network conditions..”

Rishabh Thombre

Data Engineer at Proton Technologies

[Read full review](#) 

“The best features in GoAnywhere MFT from my perspective include its user browser-based interface and good UI to monitor the latest logs, audit logs for HTTPS, and SFTP services.

GoAnywhere MFT has saved us time in securely connecting with necessary third parties, maintaining security during transport at rest or in transit, for which there are no complaints from the compliance team.

I utilize multiple automations and processes within the organization that run on different platforms, employing various API tools like WSO2 and ServiceNow, integrating thoroughly and reusing resources as much as possible..”

NarendraBhujbal

Technology Architect at a tech vendor with 10,001+ employees

[Read full review](#) 

“We have integrated with some requirements for services such as Salesforce, SharePoint, and Microsoft Dynamics because customers needed integration with SharePoint or SAML single sign-on.

“The range of connectors that GoAnywhere MFT provides out-of-the-box is very valuable because you can easily set up and connect and integrate with SharePoint.

“My customers make use of GoAnywhere Agents..”

Sukniran Janruang

Country Manager at SOLPAC (Thailand) Co., LTD

[Read full review](#) 

“The features and capabilities of GoAnywhere MFT that I have found most valuable are the projects that allow us to build different templates with extensive customization. We can customize the entire project as needed and create if-else statements in any way we would like to find any pattern or different words inside files, archive them, and unzip them. There is a very flexible and extended way to automate processes exactly the way we are looking for.

“A benefit I have seen over the two years that I have been working with GoAnywhere MFT is that we can use the MFT as a parameter between our customers and our company, and we can automate all processes with file exchange and sending files through GoAnywhere MFT. It is easy and automating a lot of processes and work. Using it with different customers via PGP allows us to encrypt and unencrypt all the traffic, which is very convenient and helpful..”

Denis Burnaev

Infrastructure Security & Cyber Engineer at El Al

[Read full review](#) 

“GoAnywhere MFT has become a central part of our file transfer and automation strategy. By securely transferring files, it helps us standardize workflows and improve visibility into transfer activities, reducing the need for manual intervention. Decentralized management services, scheduling capabilities, detailed audit logs, and monitoring features make it easier for our team to maintain compliance, troubleshoot issues quickly, and ensure that critical business data is delivered reliably and securely. Overall, it has improved operational efficiency and reduced the risk associated with manual file handling.

“The features that stand out the most in GoAnywhere MFT are its workflow automation, secure file transfer protocols, SFTP, FTPS, HTTP management, and detailed auditing reporting. The drag and drop project center makes it easy to build automated complex file transfer workflows without extensive scripting. I also appreciate its scheduling capabilities, file encryption support, PGP email notifications, and the real-time monitoring dashboard. These features help reduce manual effort, improve security, and provide complete visibility into file transfer operations, making day-to-day management much more efficient.

“The drag and drop project designer has had a big impact on our daily work because it allows us to create modified file transfer workflows without spending a lot of time writing scripts. When a new partner onboarding for file transfer requirements comes in, we can quickly build, test, and deploy a workflow using the visual interface. This has reduced the deployment times and made it easier for team members with different technical skill levels to manage and integrate. The real-time monitoring dashboard is equally valuable. It provides instant visibility into all active and completed transfers, allowing us to quickly identify failed jobs, address issues, or identify transfer delays. Instead of manually checking logs across multiple systems, our teams can monitor everything from a single dashboard and receive alerts when action is needed. It has significantly improved troubleshooting efficiency and helped us maintain service levels of critical business processes. Overall, these features have reduced manual effort, improved operational flexibility, and enabled our team to respond to issues much faster than before..”

Varun Mehra

collaboration support engineer at a retailer with 11-50 employees

[Read full review](#) 

Other Solutions Considered

“We had another product before we switched to Fortra. Their customer support couldn't answer our technician's questions fast enough, whereas Fortra gave us the answer we needed in a timely manner. .”

LEEJET AGGASSI HERMOSA HUGO

Consultant at Bridgeway Communication System, Inc.

[Read full review](#) 

“In Thailand, GoAnywhere MFT is the only major player in managed file transfer, and I do not see any good competition to GoAnywhere MFT on the market because it is convenient for Thai people. MOVEit and HAF are not real competitors. Control-M MFT is also not a competitor. When we compare all functions, GoAnywhere MFT is the best choice for customers..”

Sukniran Janruang

Country Manager at SOLPAC (Thailand) Co., LTD

[Read full review](#) 

“We evaluated a few alternatives including IBM Sterling File Gateway and Progress MOVEit. We selected GoAnywhere MFT because it offered a good balance of automation, security, ease of management, and file transfer capability while fitting well with our operational requirements..”

Dilip Chauhan

Tester at Pantomath Group

[Read full review](#) 

“I have experience with four products: MOVEit, Control-M, IBM Sterling, and HAF. GoAnywhere MFT is the best one for me because MOVEit does not have easy configuration and also has problems when installed on the cloud. HAF also presents configuration and interface that is not user-friendly. Control-M is always kept secretive, and technical aspects are not easy to learn independently. IBM Sterling is also not easy to use..”

Sukniran Janruang

Country Manager at SOLPAC (Thailand) Co., LTD

[Read full review](#) 

“Before selecting GoAnywhere MFT, we evaluated several other managed file transfer solutions including IBM Sterling File Gateway, Progress Movit, and Xphase Secure Transport. Each platform had strong capabilities, but GoAnywhere MFT stood out because of its balance of functionality, ease of use, workflow automation features, security controls, and overall value. The visual workflow designers, centralized administration, comprehensive auditing, and straightforward deployment model were particularly attractive to our team. We also found that GoAnywhere MFT offered a strong combination of enterprise-grade features without the complexity or cost of some larger managed file transfer platforms, making it a good fit for our operational and business requirements..”

Varun Mehra

collaboration support engineer at a retailer with 11-50 employees

[Read full review](#) 

“Before implementing GoAnywhere MFT, we relied on a combination of manual file transfer processes, custom scripts, and basic SFTP tools to manage data exchanges. While those solutions worked for simple transfers, they became difficult to maintain as the number of workflows, business partners, and compliance requirements grew. We decided to move to GoAnywhere MFT because we needed a more centralized and scalable platform. Key factors in the decision included workflow automation, centralized monitoring, detailed reporting, stronger security controls, and easier management of file transfer processes. The transition helped eliminate many manual tasks, improve visibility into transfer activities, and reduce the operational overhead associated with maintaining multiple scripts. Overall, GoAnywhere MFT provided a more reliable and enterprise-ready solution for our growing file transfer requirements..”

Varun Mehra

collaboration support engineer at a retailer with 11-50 employees

[Read full review](#) 

ROI

Real user quotes about their ROI:

“Approximately, it is around seven hundred. There are more than ten thousand employees, but only seven hundred to eight hundred people in our team that I know use GoAnywhere MFT. I do not know about the others, but approximately as per my knowledge, it is seven hundred..”

Saunak Dasgupta

Senior Associate Consultant at Ernst & Young

[Read full review](#) 

“From my perspective, I have seen tangible benefits, including return on investment, but it depends on the use case. Our company has hundreds of jobs that we are automating and there are a lot of gigabits of files that we are transferring and receiving. The benefit is obvious because doing that via other ways, especially on-premise, would be more difficult. I do not know exactly the price, but the benefit for us is huge..”

Denis Burnaev

Infrastructure Security & Cyber Engineer at El Al

[Read full review](#) 

“I would say we see a positive ROI, although it is easier to see in operational efficiency and risk reduction than in direct headcount reduction. A good example is our recurring file transfer process; before GoAnywhere MFT, some transfers required manual monitoring, file validation, and occasional intervention when scripts failed. After automating those workflows, the amount of time spent on routine transfer management dropped noticeably..”

Anumula Hitesh

Senior Business Development Executive at Digitaltrack

[Read full review](#) 

“We have seen a positive return on investment. The biggest benefit was time saving through the automation of routine file transfer processes. Before implementation, some transfers required manual monitoring and intervention. With the automated workflows and centralized management, the team spent less time on repetitive tasks and more time on higher value activities. We also experienced fewer transfer-related errors and improved operational efficiency..”

Dilip Chauhan

Tester at Pantomath Group

[Read full review](#) 

“We saw massive ROI within the first six months of deployment. From a direct time-saving perspective, we went from roughly 60 to 80 hours a month in manual scripting and troubleshooting down to zero. This essentially gave us back the entire full-time engineer's worth of capacity. While we did not reduce our headcount, we were able to completely reallocate those valuable technical resources to focus heavily on our core platform. We have completely avoided the heavy financial cost and penalties associated with missed SLAs and compliance violations because our transfer failure rate dropped by 90 percent. When you factor in the speed at which we can now onboard new trading partners, minutes instead of days of custom coding, the operational cost saving has been massive..”

Lalit Wagh

[Read full review](#) 

Machine Learning Engineer at a consultancy with 11-50 employees

“We have seen a positive ROI from GoAnywhere MFT. While it is difficult to attribute exact dollar amounts solely to the platform, the operational savings and efficiency gains have been significant. One of the most noticeable benefits has been a reduction in manual effort. We estimate that automation has reduced the time spent on routine file transfer tasks by approximately sixty to seventy percent, saving several hours per week for our operations and support teams. For example, a daily partner file exchange process that previously required manual monitoring, validation, and transfer initiation is now fully automated. What used to take thirty to sixty minutes of staff time each day now runs unattended with notifications, requiring intervention only when necessary. We have also seen fewer transfer failures and data handling errors, which reduce the time spent troubleshooting issues and minimize the business impact of missed or delayed transfers. Additionally, centralized auditing and reporting have reduced the effort required for compliance reviews and internal audits..”

Varun Mehra

[Read full review](#) 

collaboration support engineer at a retailer with 11-50 employees

Use Case

“We use GoAnywhere to filter files for our clients and set up SOP connections. Our clients are primarily large corporations, and we have around 10 specialists working with GoAnywhere. .”

LEEJET AGGASSI HERMOSA HUGO

Consultant at Bridgeway Communication System, Inc.

[Read full review](#) 

“I use GoAnywhere MFT for securely transferring files between different systems and environments, moving data files such as CSV or other structured files between our internal systems, the Azure cloud storage, and external partners. I mainly use it to automate file transfers and schedule workflows, which reduces our workload..”

Rishabh Thombre

Data Engineer at Proton Technologies

[Read full review](#) 

“I am a distributor. We deal with Solpac Thailand and Solpac Japan, and for types of companies that I usually recommend, GoAnywhere MFT is my choice. We have many partners, but the main partner is Fortra, which features I find most valuable in GoAnywhere MFT..”

Sukniran Janruang

Country Manager at SOLPAC (Thailand) Co., LTD

[Read full review](#) 

“Our primary use case for GoAnywhere MFT is secure file transfer automation between internal systems, business partners, and cloud platforms. We use it to automate scheduled file exchanges for managing data workflows, monitor transfers, and ensure compliance with security requirements. It helps reduce manual effort, improve reliability, and provide centralized visibility into file transfer activity.

“One of our common workflows involves automatically transferring delivery support within our internal ERP system and external partners. GoAnywhere MFT picks up files from a designated folder and encrypts them using PGP, validates the file format, and securely transfers them via SFTP to the partner server. It then sends automated notifications to the relevant team, confirming successful delivery or alerting them if any issue occurs. For implementing GoAnywhere MFT, the difference is that required manual intervention and monitoring are no longer necessary. With automation in place, we have reduced the error rate, delivering reliability and safe clinic administration while maintaining compliance with security requirements..”

Varun Mehra

collaboration support engineer at a retailer with 11-50 employees

[Read full review](#) 

“GoAnywhere MFT use cases include transferring files, using a gateway, and implementing anti-malware scanning to avoid malicious files. We are also engaged in security compliance-related work and using automation features.

In my project, I am utilizing template-based scenarios to reuse templates for standard patterns in internal and external file transfers. I also use cloud-based connectors and other features like AWS and Azure agents to operate on-premises. Those features are quite helpful.

I use GoAnywhere MFT connectors for internal connectivity within the organization and during SFTP connections with third parties, employing SFTP Gate and SFTP Put Task, which are very easy to use through a drag-and-drop mechanism. GoAnywhere MFT's connectors are very important to us.

The range of connectors that GoAnywhere MFT provides out of the box is very wide. In my current business scenario, I utilize it for SharePoint, which is very useful. I also use the OAuth connector to connect before the actual SharePoint site.

I am using GoAnywhere MFT Secure Forms, which are quite useful for changing various kinds of passwords and credentials. I can use GoAnywhere MFT Secure Forms for bank-related transactions, enabling users to change resource client credentials such as access key, SAS token, or Entra ID client secret details. If users are aware of existing credentials, they can directly manage credential changes without needing middleman interference.

Some business units are using GoAnywhere MFT's GoFast feature to transfer files quickly, leveraging its inbuilt protocol for faster transfers as needed..”

NarendraBhujbal

Technology Architect at a tech vendor with 10,001+ employees

[Read full review](#) 

“I use it mainly for transferring files. Our company has different departments and silos, and we want to send files between them securely. For example, the financial department might want to send a file or a document to the HR department. We use GoAnywhere MFT to send those files securely. Initially, we were using emails and had to attach six files or ten files to each email as an attachment. Now we just use GoAnywhere MFT to send files, and we also use it to send files to our contractors. Instead of using emails to attach files, we just use GoAnywhere MFT. A good thing about GoAnywhere MFT is that you can send files securely using secure protocols such as HTTPS, FTPS, and SFTP.

We use Microsoft SharePoint with GoAnywhere MFT. Initially, we were using Microsoft SharePoint as our document sharing software. When we switched to GoAnywhere MFT, some files were still stored in Microsoft SharePoint, and all our data was still in Microsoft SharePoint. That is the main integration we used. We also use Fortra Automate.

It depends on which connector with GoAnywhere MFT we are using. For example, with Jira, we use it mainly for project management and task management. If we are doing a certain project that involves sending files and sharing documents, we use GoAnywhere MFT to help us send those files attached to the project in Jira. With SharePoint, we use it for storing documents and sharing. We integrated it so that everything synchronized automatically. We never had to manually import files from SharePoint to GoAnywhere MFT. When we connected everything, it was synchronized, and data could be transferred automatically from SharePoint to GoAnywhere MFT.

Our technical team uses GoAnywhere Agents to run scripts and commands remotely. We collect files from branch offices, partners, and contractors. Using these agents, they execute workflows and transfer files automatically and securely between all our departments. The agents pull data from all our branches and partners, for example contractors, then send information to all our departments.

We do use GoAnywhere MFT's Secure Forms feature. For example, if I am working in the HR department and I need data from the financial department, I send a

form. When the financial department receives this form, they fill it out and send it back to us.

I was not the one who installed this software as I found it existing in the setup process of GoAnywhere MFT.

We have multiple silos and multiple departments with GoAnywhere MFT. For example, we have many platforms and departments such as HR and financial departments. We use multiple workflows at the same time for file transfers and everything else.

GoAnywhere MFT combines everything and all departments into a central system..”

Derrick Aine

Information Technology Manager at Benchmac Safety Services Ugand

[Read full review](#) 

Setup

The setup process involves configuring and preparing the product or service for use, which may include tasks such as installation, account creation, initial configuration, and troubleshooting any issues that may arise. Below you can find real user quotes about the setup process.

“The setup process for GoAnywhere MFT is straightforward, as I had training that made installation easy, although I occasionally needed to re-architect some framework flows for mainframe services, which took time..”

Narendra Bhujbal

Technology Architect at a tech vendor with 10,001+ employees

[Read full review](#) 

“Nothing is difficult about the initial setup, and deploying GoAnywhere MFT is easy. GoAnywhere MFT is simple to install, download, and access. Instructions are easy to obtain and download. There are also many videos available through YouTube and social media that everyone can access and learn from independently..”

Sukniran Janruang

Country Manager at SOLPAC (Thailand) Co., LTD

[Read full review](#) 

“The initial deployment of GoAnywhere MFT is very easy but does require some configuration and planning. With support from customer service, we identified the system and file transfer needs, and according to their guidance, we configured the necessary connections, users, permissions, and security settings. Overall, the initial deployment was very easy with their help..”

Rishabh Thombre

Data Engineer at Proton Technologies

[Read full review](#) 

“GoAnywhere MFT is a commercial solution, so the investment needs to be justified by the volume of file transfer, automation requirements, and security needs. From a setup perspective, the installation was fairly straightforward. Most of the efforts went into configuring workflows, partner connections, and security policies rather than the initial deployment itself..”

Dilip Chauhan

Tester at Pantomath Group

[Read full review](#) 

“We have almost 100% full adoption. There are no employees complaining that this software is hard to use or hard to onboard.

I was present during the onboarding process for new departments. The onboarding process is very simple. There is a feature that highlights about the different features available. If you want this, you click here; if you want that, you click there. Everything is there. I was impressed by how our team members adopted GoAnywhere MFT. We have almost 100% full adoption with no employees complaining that this software is hard to use or hard to onboard..”

Derrick Aiine

[Read full review](#) 

Information Technology Manager at Benchmac Safety Services Ugand

“I would describe the learning curve for GoAnywhere MFT as moderate; new users can usually learn the basics fairly quickly, especially if they are mainly monitoring transfers, checking logs, or managing routine tasks. For administrators, there is a bit more to learn because GoAnywhere MFT offers a lot of functionality around workflow, security settings, scheduling, user management, encryption, and partner connections. The platform is powerful, but with that comes some complexity. In my experience, most administrators become comfortable with day-to-day operations within a few weeks. However, mastering more advanced workflows, troubleshooting complex integrations, or designing large-scale automation processes can take longer and typically require hands-on experience..”

Anumula Hitesh

[Read full review](#) 

Senior Business Development Executive at Digitaltrack

Customer Service and Support

“I would rate the after-sales service from Fortra at four stars on a five-star scale. Their technical support receives a rating of four out of ten from me..”

Sukniran Janruang

Country Manager at SOLPAC (Thailand) Co., LTD

[Read full review](#) 

“I have contacted GoAnywhere MFT customer support a few times for configuration or integration-related issues, especially in the beginning. They provided me with good assistance and guided me to troubleshoot and resolve those technical issues..”

Rishabh Thombre

Data Engineer at Proton Technologies

[Read full review](#) 

“On a scale of one to ten, I would rate GoAnywhere MFT's customer service and technical support around an eight, as I have not had many chances to interact directly with the Fortra team due to regional constraints, and sometimes responses during production issues are a bit delayed..”

NarendraBhujbal

Technology Architect at a tech vendor with 10,001+ employees

[Read full review](#) 

“In our experience with GoAnywhere MFT, customer support has been positive overall. The support team is knowledgeable, professional, and generally responsive when assistance is needed. For routine questions and standard technical issues, we have typically received timely and helpful responses that allow us to resolve problems quickly..”

Varun Mehra

collaboration support engineer at a retailer with 11-50 employees

[Read full review](#) 

“I communicate with the technical support of GoAnywhere MFT sometimes, depending on the issue. We are using BullWall for integration, so they are our support, and I am not speaking directly with GoAnywhere MFT. Their support is excellent. Overall, I would rate the technical support on a scale of one to ten as nine because there is always room for improvement..”

Denis Burnaev

Infrastructure Securiy & Cyber Engineer at El Al

[Read full review](#) 

“I have problems with customer support with GoAnywhere MFT, especially the technical support team. Recently we were executing transfers from SharePoint to GoAnywhere MFT and ran into problems. When we contacted the support team, they told us the issue was with SharePoint and not with GoAnywhere MFT, though everything was well connected. When we put a support ticket on SharePoint, they told us that the issue was with GoAnywhere MFT and specifically their integration. They never sorted our issue, and still now, after a week has passed, there is no connection between our SharePoint and GoAnywhere MFT..”

Derrick Aiine

Information Technology Manager at Benchmac Safety Services Ugand

[Read full review](#) 

Other Advice

“I rate Fortra GoAnywhere 10 out of 10. I would recommend GoAnywhere, depending on a company's needs. It's appropriate for enterprises who want to securely transfer files from service to service. .”

LEEJET AGGASSI HERMOSA HUGO

Consultant at Bridgeway Communication System, Inc.

[Read full review](#) 

“GoAnywhere MFT is open-source and offers an easy-to-use, browser-based interface, with quick installation for other organizations through GoAnywhere MFT Agent installables. However, in contrast to IBM, which excels in security perspectives related to clustering, GoAnywhere MFT might lack some features needed for bank transactions, like active-active load balancing.

I would be interested in a solution that centralizes all of my products and processes.

A piece of advice I would share is to avoid creating a single point of failure when building or designing any solution. The design structure should ensure that if one primary server fails, the system should seamlessly switch to a secondary server, maintaining high availability at about 99.99%.

My overall rating for this product is nine out of ten..”

NarendraBhujbal

Technology Architect at a tech vendor with 10,001+ employees

[Read full review](#) 

“My advice to organizations considering GoAnywhere MFT is to clearly understand your file transfer requirements, integration needs, security policies, and growth plans for implementation. The platform offers a wide range of capabilities, and taking time to properly design workflows at the beginning will help maximize its value. Start by automating a few high-impact tasks, as this typically demonstrates value and gains experience with the platform. Ultimately, aim to leverage the workflow automation, secure monitoring, and reporting features rather than using it only as a basic file transfer tool. It is also worth investing time in training administrators and developers on best practices, as this can significantly improve implementation speeds and long-term maintainability. Leveraging the documentation, knowledge base, and vendor support resources early in the deployment can help avoid common configuration challenges. Overall, if your organization deals with a significant volume of file transfer needs and requires strong security, automation, compliance, and centralized management, GoAnywhere MFT is a solid choice that can deliver substantial operational and business benefits when implemented correctly. I would rate this solution a 9 out of 10..”

Varun Mehra

collaboration support engineer at a retailer with 11-50 employees

[Read full review](#) 

“I have explored the Agent-based functionality mainly to automate and manage file transfer activities across our different systems, whether on-premises or in the cloud. This is useful for reducing manual work and ensuring files are transferred consistently.

“I have exposure to the Secure Forms feature, which is useful for collecting files or information securely from users or external parties. It allows us to submit credential information in a controlled way instead of relying on emails or less secure file-sharing methods.

“I have used GoFast, which provides a more streamlined user experience for managing file transfer activities. It makes common tasks easier to access and helps users work with the platform more efficiently, making it a nice improvement from a usability perspective.

“I would rate this product an eight out of ten..”

Rishabh Thombre

Data Engineer at Proton Technologies

[Read full review](#) 

“I do not make use of GoAnywhere MFT's connectors for services such as [Salesforce](#), [SharePoint](#) Online, [Dynamics 365](#), or other services. The range of connectors that GoAnywhere MFT provides out of the box is probably good, but except for SFTP and a few jobs that we are using via HTTPS, we are not using any other connector. We may use another connector in the future, but only for a CDR platform, such as Opswat.

“The importance of GoAnywhere MFT's connectors to my operations is significant as it is a production platform. All the connectors and all the ways we are using SFTP are production systems. If it becomes unavailable, there will be significant consequences for our company.

“We have divided the environment between the DMZ for the MFT and the agent.

The importance of GoAnywhere MFT's agents in enabling me to extend MFT automation to remote systems is that this is the core component for connecting to all NFS and file servers. Essentially, it is the core component for sending and receiving files into our company and has a huge impact as a core component within our architecture.

“I do not use GoAnywhere MFT's secure forms. I do not use the GoFast feature to accelerate data transmission. I do not know if GoAnywhere MFT has saved me time in connecting securely with the third parties I need to collaborate with because there is all the negotiation about IPs, certificates, and usernames. However, it is easy today to set up a basic template to exchange with a third party or a client, and in the world of SFTP, there is not too much configuration to do for the initial connection.

“My overall review rating for GoAnywhere MFT is eight..”

Denis Burnaev

Infrastructure Securiy & Cyber Engineer at El Al

[Read full review](#) 

“Sometimes customers use Secure Form for making questionnaires to get customer responses when they have registered the application through Secure Form.

“We often use GoFast because customers need to transfer large files through a network from one location to another, and they use GoFast to accelerate data transmission.

“Because GoFast uses UDP protocol, it has affected some operations differently from TCP protocol. Some customers think UDP is unsecured and cannot track transactions. However, GoAnywhere MFT has special features to make UDP stable. Customers can track transactions that are transferred through UDP, and with GoAnywhere MFT, UDP can use hashing to verify data from the original source.

“Some customers use Secure Form, though not extensively. In Thailand, customers have in-house developed electronic forms.

“The price is reasonable because GoAnywhere MFT is flexible and can apply to customer work scenarios. It has a friendly interface and is easy to understand. GoAnywhere MFT is no-coding; you just use GoAnywhere MFT workflow and nodes without coding.

“Sometimes, when presenting GoAnywhere MFT to small and medium-sized companies in Thailand, they only want to use GoAnywhere MFT for transferring data but do not need to use certified certificates. These companies are not focused on security; they just want to use managed file transfer with automation. However, GoAnywhere MFT has specific security features. If a company does not need to apply security into the system, they may think GoAnywhere MFT functionality is expensive. The GoAnywhere MFT license is expensive for companies that only want to use file transfer without security.

“If we can choose what to improve, it is the monitoring, and I have already mentioned that the monitoring and technical support could be improved as well. I would rate this review nine out of ten..”

About PeerSpot

PeerSpot is the leading review site for cloud, AI, and business software. We created PeerSpot to provide a trusted platform to share information about software, applications, and services. Since 2012, over 22 million people have used PeerSpot to choose the right software for their business.

PeerSpot helps tech professionals by providing:

- A list of products recommended by real users
- In-depth reviews, including pros and cons
- Specific information to help you choose the best vendor for your needs

Use PeerSpot to:

- Read and post reviews of products
- Access over 30,000 buyer's guides and comparison reports
- Request or share information about functionality, quality, and pricing

Join PeerSpot to connect with peers to help you:

- Get immediate answers to questions
- Validate vendor claims
- Exchange tips for getting the best deals with vendor
